AMRITA VISHWA VIDYAPEETHAM

5-yr Integrated M Sc –Mathematics

CURRICULUM AND SYLLABUS

(Admission 2019, 2020, 2021)

Vision of the Institute

To be a global leader in the delivery of engineering education, transforming individuals to become

creative, innovative, and socially responsible contributors in their professions.

Mission of the Institute:

* To provide best-in-class infrastructure and resources to achieve excellence in technical education,
* To promote knowledge development in thematic research areas that have a positive impact on society, both nationally and globally,
* To design and maintain the highest quality education through active engagement with all stakeholders –students, faculty, industry, alumni and reputed academic institutions,
* To contribute to the quality enhancement of the local and global education ecosystem,
* To promote a culture of collaboration that allows creativity, innovation, and entrepreneurship to flourish, and
* To practice and promote high standards of professional ethics, transparency, and accountability.

PROGRAM OUTCOMES (PO)

PO1 **Knowledge in Mathematical Science**: Understand the basic concepts, fundamental principles and the scientific theories related to mathematical sciences.

PO2 **Abstract thinking**: Ability to absorb and understand the abstract concepts that lead to various advanced theories in mathematical sciences.

PO3 **Modelling and solving**: Ability in modelling and solving problems by identifying and employing the appropriate existing theories and methods.

PO4 **Advanced theories and methods**: Understand advanced theories and methods to design solutions for complex mathematical problems

PO5 **Applications in Engineering and Sciences:** Understand the role of mathematical sciences and apply the same to solve the real life problems in various fields of study.

PO6 **Modern software tool usage**: Acquire the skills in handling scientific tools towards solving problems and solution analysis.

PO7 **Environment and sustainability**: Understand the significance of preserving the environment towards sustainable development.

PO8 **Ethics**: Imbibe ethical, moral and social values in personal and social life leading to highly cultured and civilized personality. Continue to enhance the knowledge and skills in mathematical sciences for constructive activities and demonstrate highest standards of professional ethics.

PO9 **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings

PO10 **Communication**: Develop various communication skills such as reading, listening, and speaking which will help in expressing ideas and views clearly and effectively.

PO11 **Project management and Research**: Demonstrate knowledge, understand the scientific and management principles and apply these to one's own work, as a member/ leader in a team to manage projects and multidisciplinary research environments. Also use the research-based knowledge to analyse and solve advanced problems in mathematical sciences.

PO12 **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

5-yr Integrated M Sc –Mathematics

CURRICULUM
(Admission 2019, 2020, 2021)

SEMESTER 1				
Course Code	**Course Title**	**L T P**	**Cr**	**ES**
18ENG101	Communicative English	2 0 2	3	A
	Language Paper I	1 0 2	2	B
18MAT101	Calculus	3 1 0	4	G
18MAT103	Discrete Structures	3 1 0	4	F
18CSA100	Problem Solving and Computer Programming	3 0 0	3	C
18PHY101/ 18COM104	Physics / Introduction to Management and Finance	3 0 0	3	D
18CSA180	Problem Solving and Computer Programming Lab.	0 0 2	1	L1
18PHY181/ 18CSA186	Physics Lab / PC Software Lab.	0 0 2	1	L2
18CUL101	Cultural Education I	2 0 0	2	E
	TOTAL		**23**	

SEMESTER 2				
Course Code	**Course Title**	**L T P**	**Cr**	**ES**

* **Two Open Elective** courses are to be taken by each student, one each at the **4th and the 5th** semesters, from the list of Open electives offered by the School.

@ Students undertaking and registering for a Live-in-Lab project, can be exempted from registering for an Open Elective course in

the fifth semester.

Evaluation Pattern

50:50 (Internal: External) (All Theory Courses)

Assessment	Internal	External
Periodical 1 (P1)	15	
Periodical 2 (P2)	15	
*Continuous Assessment (CA)	20	
End Semester		50

80:20 (Internal: External) (Lab courses and Lab based Courses having 1 Theory hour)

Assessment	Internal	External
*Continuous Assessment (CA)	80	
End Semester		20

70:30(Internal: External) (Lab based courses having 2 Theory hours/ Theory and Tutorial)

Theory- 60 Marks; Lab- 40 Marks

Assessment	Internal	External
Periodical 1	10	
Periodical 2	10	
*Continuous Assessment (Theory) (CAT)	10	
Continuous Assessment (Lab) (CAL)	40	
End Semester		30

65:35 (Internal: External) (Lab based courses having 3 Theory hours/ Theory and Tutorial)

Theory- 70 Marks; Lab- 30 Marks

Marks

Assessment	Internal	External
Periodical 1	10	
Periodical 2	10	
*Continuous Assessment (Theory) (CAT)	15	
Continuous Assessment (Lab) (CAL)	30	
End Semester		35

*CA –Can be Quizzes, Assignment, Projects, and Reports.

Letter Grade	**Grade Point**	**Grade Description**
O	10.00	Outstanding
A+	9.50	Excellent
A	9.00	Very Good
B+	8.00	Good
B	7.00	Above Average
C	6.00	Average
P	5.00	Pass
F	0.00	Fail

Grades O to P indicate successful completion of the course

$$CGPA = \frac{\sum (C_i x Gr_i)}{\sum C_i}$$

Where

C_i = Credit for the i^{th} course in any semester

Gr_i= Grade point for the i^{th} course

Cr. = Credits for the Course

Gr. = Grade Obtained

5-yr Integrated M Sc –Mathematics

SYLLABI

(Admission 2019, 2020, 2021)

18ENG101 **Communicative English** **2-0-2-3**

Objectives:

To help students obtain an ability to communicate fluently in English; to enable and enhance the students skills in reading, writing, listening and speaking; to impart an aesthetic sense and enhance creativity

Course Contents:

Unit I

Kinds of sentences, usage of preposition, use of adjectives, adverbs for description, Tenses, Determiners- Agreement (Subject –Verb, Pronoun- Antecedent) collocation, Phrasal Verbs, Modifiers, Linkers/ Discourse Markers, Question Tags

Unit II

Paragraph writing –Cohesion - Development: definition, comparison, classification, contrast, cause and effect - Essay writing: Descriptive and Narrative

Unit III

Letter Writing - Personal (congratulation, invitation, felicitation, gratitude, condolence etc.) Official (Principal / Head of the department/ College authorities, Bank Manager, Editors of newspapers and magazines)

Unit IV

Reading Comprehension –Skimming and scanning- inference and deduction –Reading different kinds of material –Speaking**:** Narration of incidents / stories/ anecdotes- Current News Awareness

Unit V

Prose: John Halt‟s ‟[„Three**Detailed**] Kinds of Discipline Max Beerbohm‟s „The[**Detailed**Golden] Drugget‟

Poems: Ogden Nash- „This is Going to**Detailed**Hurt] Just a Little Bit‟
Robert Kroetsch–„I am Getting Old -Now‟„I,**Detailed**Too‟Langston][Hughes
Wole Soyinka- „Telephone **[Non**Conversation‟**-Detailed**]
Kamala Das- „The Dance of**Non- Detailed**the] Eunuchs‟ [
Short Stories: EdgarCat‟,AllanRuskin Poe‟sBond‟s„The„TheBlack‟**[Non**Time- St **Detailed**]

Course Outcomes

CO1: Demonstrate competency in all the four linguistic skills, viz. listening, speaking, reading and writing

CO2: Apply different styles of communication in professional context
CO3: Participate in different planned & extempore communicative activities
CO4: Interpret and discuss facts and information in a given context
CO5: Develop an appreciation for human values

CORE READING:

1. *Ruskin Bond, Time Stops at Shamli and Other Stories, Penguin Books India Pvt Ltd, 1989*
2. *Syamala, V. Speak English in Four Easy Steps, Improve English Foundation Trivandrum: 2006*
3. *Beerbohm, Max, The Prince of Minor Writers: The Selected Essays of Max Beerbohm (NYRB Classics), Phillip Lopate (Introduction, Editor), The New York Review of Book Publishers.*
4. *Edger Allan Poe. The Selected Works of Edger Allan Poe. A Running Press, 2014.*
5. *Online sources*

References:

1. *Ruskin Bond, Time Stops at Shamli and Other Stories, Penguin Books India Pvt Ltd, 1989*
2. *Martinet, Thomson, A Practical English Grammar, IV Ed. OUP, 1986.*
3. *Murphy, Raymond, Murphy"s English Grammar, CUP*
4. *Online Sources*

18MAT101 CALCULUS 3 1 0 4

Unit 1

Differentiation: The Derivative as a Function –Differentiation Rules –The Derivative as a Rate of Change – Derivatives of Trigonometric Functions – The Chain Rule and Parametric Equations – Implicit Differentiation –Linearization and Differentials.
Chapter 2- Sec: 2.1 to 2.7 and Chapter 3- Sec: 3.1 to 3.6, 3.7, Self Study - Sec: 3.7.

Unit 2

Application of Derivatives: Extreme values of Functions –The Mean Value Theorem –Monotonic Functions and the First Derivative Test –Concavity and Curve Sketching –Intermediate Form Hospital"s– AntiDerivativesRule.
Chapter 4- Sec: 4.1 to 4.4, 4.6 to 4.8, Self Study - Sec: 4.5

Unit 3

The Definite Integral –The Fundamental Theorem of Calculus –Indefinite Integrals and the Substitution Rule –Substitution and Area between Curves.
Chapter 5- Sec: 5.1 to 5.6

Unit 4

Techniques of Integration: Basic Integration Formulas –Integration by Parts –Integration of Rational Functions by Partial Fractions –Trigonometric Integrals –Trigonometric Substitutions – Numerical Integration –Improper Integrals.
Chapter 8: 8.1 to 8.5, 8.7,8.8, Self Study - Sec: 8.6

Unit 5

Application of Definite Integrals: Volumes by Slicing and Rotation about an Axis –Volumes by Cylindrical Shells –Lengths of Plane Curves –Moments and Centre of Mass –Areas of Surface of Revolution and the Theorems of Pappus –Work –Fluid Pressure and Forces.
Chapter 6 –Sec: 6.1 to 6.7

Course Out Comes

CO1: An ability to understand the basic concepts of Derivative.
CO2: An ability to understand the concept of extreme values and apply the derivative test to identify concavity and extreme values.
CO3: Understand the concept of integration and apply them to evaluate the area between curves.
CO4: Apply the different techniques of integration to evaluate the integrals. Also understand the nature of numerical and improper integrals.
CO5: Apply the concept of integration to applications in science and engineering

18MAT103 Discrete Structures 3 1 0 4

Unit-I

Review: Matrices
Linear System of Equations, Gauss Elimination, Consistency of a linear system of equations, Vectors, Linear independence and dependence of vectors, Rank of a Matrix. Text Book: 1

Unit-II

Eigen values, Eigen vectors, Properties of eiven values and eigen vectors, Cayley-Hamilton theorem, Some Applications of Eigen value Problems, Similarity of Matrices, Diagonalization of a matrix, Power of a matrix, Diagonalization by orthogonal transformation, Quadratic forms, Canonical form of a quadratic form, Nature of quadratic forms. Text Book: 1

Unit-III

Propositional Logic, Equivalences, Predicates and Quantifiers, Sets, Functions and growth of functions. Text Book: 2

Unit-IV

Advanced Counting Techniques: Recurrence relations, Solving Linear Recurrence relations. Generating Functions. Text Book: 2

Unit –V

Relations and their properties, n-ary relations, Equivalence relations, partial order relations. Text Book: 2

Course Outcomes

CO-1: Understand the basic concepts of linear system of equations and their solutions.

CO-2: Understand the concepts of Eigen values and Eigen vectos and apply to quadratic and canonical forms.

CO-3: Understand the basic concepts of Mathematical reasoning, set and functions

CO-4: Apply the concepts of generating functions to solve the recurrence relations.

CO-5: Understand the concepts of various types of relations, partial ordering and equivalence relations.

18CSA100 PROBLEM SOLVING AND COMPUTER PROGRAMMING 3 0 0 3

Introduction to problem solving: algorithm development and flowchart. Introduction to Computer terminologies and computer languages. C Fundamentals: structure of C program: directives, functions, statements, printing strings, comments; compilation and execution, Programming errors and debugging. Variables and assignment, reading input; data types, constants, identifiers, keywords, operators - arithmetic, logical, relational, assignment; expressions - precedence and associativity, type cast-implicit and explicit; selection statements:- if, if else, nested if, if else ladder, switch. Case.

Iterative structures: entry controlled and exit controlled loop, exiting from a loop: break, continue, goto; nested loops. Functions: library functions, user defined functions: defining and calling functions, function declaration, passing arguments to a function, returning values from function. Storage classes - auto, extern, static, register variables, scope of a variable. Recursion. Number systems: binary, octal and

hexadecimal. Bitwise operators and enumeration.

Arrays: one dimensional numeric arrays, initialization, accessing and usage, two dimensional numeric arrays, initialization, accessing and usage. Introduction to multidimensional arrays. Strings: literal, variables: initialization, reading, writing and accessing. String handling functions. Array of strings. Passing arrays and strings to functions.

Course Outcomes

CO1: Understand the structured programming constructs: Data types, Control, selection, recursion thereby to understand a given program.

CO2: Understand and analyze a given program by tracing, identify coding errors and debug them.

CO3: Apply structured programming constructs and modularity appropriately for given problem Scenarios.

CO4: Develop Computer programs that implement suitable algorithms for problem scenarios and application performance.

CO5: Understand the efficient way of storing and retrieving data.

TEXTBOOK:

Jeri Hanly and Elliot Koffman, "Problem solving a Wesley (Pearson), 2007.

18PHY101 PHYSICS 3 0 0 3

OBJECTIVES: This course would empower the student to acquire skills and practical knowledge, which help the students in their everyday life. The properties of solids especially knowledge of elasticity help the students to identify the materials suitable for the construction of buildings, houses etc. Properties of fluids especially knowledge of viscosity and surface tension help the students in their daily life and agriculture. This course will provide a theoretical basis for doing experiments in related areas.

COURSE OUTCOMES

At the end of the course the students will be able

CO1. To describe the concepts of mechanics, properties of matter, heat and thermodynamics

CO2. Acquire the problem solving skills in mechanics, properties of matter, heat and thermodynamics

CO3. To understand the engineering applications of mechanics, properties of matter, heat and thermodynamics

CO-PO Mapping

CO 1		3														

CO 2				3												

CO 3					3											

UNIT 1

Units and measurements, Vectors: fundamentals, Motion in One Dimension: Displacement, Velocity, and Speed, instantaneous, velocity and speeds ,acceleration, motion diagrams, constant acceleration, varying acceleration, freely falling body, kinematic equations.

Motion in 2D and 3D: The displacement, Velocity and acceleration vectors,Relative velocity and Relative acceleration Two dimensional motion with constant acceleration, Projectile motion ,horizontal range and maximum height.

UNIT 2

Newton‟s laws of motion,on‟s lawinertia,ofuniversaltoque, gravitaNewt diagrams, work and Kinetic energy, potential energy and conservation of energy momentum & collisions.

Circular motion, uniform circular motion, Non-uniform Circular motion tangential and radial acceleration Rotational of rigid body inertia, torque, Angular momentum.

UNIT 3

Kinematics of moving fluids, equation of continu surface tension and surface energy, capillarity.

UNIT 4

Zeroth law of thermodynamics: Concept of temperature & its measurement, Triple point of water, Thermometers: constant volume, Constant pressure, Platinum resistance thermometry, Thermal expansion,

First law of thermodynamics: Internal energy and work, Heat and Enthalpy, Heat Capacity and its measurement, Heat transfer mechanisms - Conduction, Convection, Radiation, kinetic Theory of gases, Avogadro number, Work done by an ideal gas, Molecular Speed distribution, Molar specific heat, Adiabatic, Isothermal, Constant volume Constant Pressure process for an ideal gas.

UNIT 5

Second law of thermodynamics: Kelvin Planck statements, Entropy and its variation external and internal combustion engines - Carnot engine: Steam engine, Stirling engine, Clausius statement of second law, Refrigerator, Equivalence of Kelvin-Planck and Clausius statement. Reversibility and irreversibility, Conditions for irreversibility. Irreversibility of second law of thermodynamics

18COM104 INTRODUCTION TO MANAGEMENT AND FINANCE 3 0 0 3

Objective: To give the students an understanding on the concept of management and on the various aspects of financial management.

Unit I

Management, definition, nature, scope and objectives, importance of management, role of manager, levels of management, management and administration, functions of management. Scientific

Management Principles –Fayol‟s General Principles-Managementof Change,of Manage Resistance to Change

Unit II

Motivation and Leadership –Leadership Styles –Theories of Motivation –Maslow –McGregor. Communication, meaning, definition and characteristics of communication, elements of communication, importance, process of communication, channels of communication.

Unit III

Financial Management, meaning, definition and scope, importance, Finance Function, objectives of financial management, finance manager, functions and role of a finance manager.

Unit IV

Banks and Banking, meaning and definition, types of banks, commercial banking, functions of commercial banks, central banking, Reserve Bank of India, Nationalisation of Commercial Banks, Retail Banking, Recent trends in banking –EMI –ECS –EFT –NEFT –RTGS –CTS –CORE Banking

Unit V

Introduction to various fundamental concepts and definitions of income tax, Finance Bill, Finance Act, person, assessment year, previous year, agricultural income, total income, gross total income, assessee,

taxation of previous year‟s income in thefrom same ye total income, various heads of income, deductions available for individuals.

Course Outcomes

18CSA180 PROBLEM SOLVING AND COMPUTER PROGRAMMING LAB 0 02 1

Basic Linux commands, programs using input/output statements, operators, control structures and loops. Programs using functions and recursions. Programs using numeric one-dimensional array, two-dimensional array. Programs using strings, string handling functions and string arrays. Programs using passing arrays and strings to functions.

Course Outcomes

CO	Description
CO1	To understand the operating System Environment.
CO2	Develop computer programs for a given problem Scenario using imperative constructs.
CO3	Develop computer programs handling different data types.
CO4	Develop Modular Solutions for a given Scenario.

18PHY181 PHYSICS LAB. I 0 0 2 1

The objective of this lab course is to make students to understand the application of basic physical concepts like center of mass, rigid body dynamics, modulus of elasticity, waves and oscillations and fluid dynamics to determine the mechanical and optical properties of matter.

Course outcomes

CO1: Apply knowledge of first principle of basic sciences to do careful measurements of material properties.

CO2: Able to estimate uncertainties and draw appropriate conclusions of material properties based on experimental data

CO3: Interpret the experimental information in diagrams, graphs and tables to draw conclusions.

CO4: Acquire analytical skills, precise thinking and clarity of thought to apply knowledge of physical

concepts to practical situations.

Skill: Acquire scientific knowledge of verifying the first principle of basic sciences through experiment. The students will be able to interpret the experimental data to determine the material properties by using appropriate formula and present the result of analysis in the form of graphs and tables which improves their presentation skill. Acquire analytical skills, precise thinking and clarity of thought to apply knowledge of physical concepts for practical situations.

List of experiments:

1. Surface Tension –Capillary Rise Method.

2. Coefficient of Viscosity - Stoke‟s Method.

3. The Torsion Pendulum.

a. Moment of Inertia of the Disc.

b. The Rigidity Modules of the Material of Wire.

4. Young‟s–UniformModulusBending.

5. Spectrometer –Dispersive Power.

6. Liquid Lens –Refractive index of liquid.

7. Laser - Wave length of Laser beam.

8. Laser - Slit Width of the given slit.

9. Magnetometer –Measurement of magnetic flux.

18CSA186 PC SOFTWARE LAB. 0 0 2 1

Unit 1 Word Processing Application –MS Word

1. Open a new document and set page size to A4, margins to left (2 cm), right (2cm), top

(2.5m), bottom (2.5cm)

a. Type the following text:

Through Her extra ordinary acts of love and self sacrifice, Amma has endeared Herself to millions. Tenderly caressing everyone who comes to Her, holding them close to Her heart in a loving embrace, Amma shares Her boundless love with all. Be they young or old, sick or poor everyone who comes to Her receives the same unconditional love. Amma‟s compassion has g activities, which is drawing attention throughout th teaching that the divine exists in everything in every person, plant and animal. Perceiving this unity is the

essence of spirituality and the means by which to end all suffering. It is through this simple, yet powerful message that Amma is transforming our world, one embrace at a time.

b. Make the document error free using Spelling Thesaurus utility. d. Practice Cut, Copy and Paste.

e. Apply Page Borders, Paragraph Borders and shade the paragraphs.

f . Give appropriate heading in the Header and Page number, date in the Footer.

g. Apply paragraph settings to the document.

h. Format the text and apply bullets and numbering using menu.

i. Insert a picture in the document (use OLE feature)

j. Change one paragraph of the document into newspaper layout.

k. Practice tab settings.

2. Insert a table containing 6 rows and 7 columns: Headings –Student No, name, Mark1, Mark2, Mark3, Total, and Average.

a. Enter the details of 5 students.
b. Calculate Total & Average using „Formula" opt
c. Sort the details of students in the order of Average..
3. Generate 10 copies of interview letters to candidates from different states informing the place and time of interview. (Mail Merge)

Unit 2 Spread Sheet Application –MS Excel

1. Open a new work book and enter the details: Employee No Name Basic Pay DA HRA PF Net Pay E001 Anu 6000
E002 Anju 8000

E003 Pavan 4500

E004 Jyothy 7600

E005 Manu 6500

Calculate DA as 7.5% of Basic Pay, HRA as 5% of Basic Pay PF as 6% of Basic Pay And Net Pay = Basic Pay + DA + HRA - PF .

2. Create a series using AutoFill handle.

3. Save the workbook & give suitable title in the Header and date in the Footer, Preview the file.
4. Create a name for a range of cells in the work sheet.
5. Practice Rows, columns, Cells and work sheet format options.
6. Clear the formats of 5 the row.
7. Delete the last sheet of the workbook
8. Make a copy of the first sheet and rename it.
9. Practice paste special options.

Unit 3 Spread Sheet Application –MS Excel

1. Find the Sum of Net Pay using function.

2. Write a function to find the count of employees in G20 cell.
3. Insert comments in different cells and practice hyperlinks.
4. Create your own style for worksheets.

5. Create a database having the headings Roll No, Name, Mark1, Mark2, Mark3 and Total. Before entering data give validation rules:

a. For roll no –Enter numbers between 1 and 50
b. For name –Enter names that have text length between 3 and 15.
c. For marks –Enter marks between 0 and 99
6. Insert records and Sort the records.
7. Create a chart for the above details.
8. Create a pie chart for the student with highest mark.
9. Practice Auto Filter and advanced Filter.

Unit 4 Presentations using PowerPoint –2000

1. Open a new Presentation and insert a new slide.

2. Apply appropriate slide transition to it.
3. Insert a number 4 more slides and set up the show for all.
4. Text and Word art into slides and apply custom animations.
5. Format the text and word art in the slides and apply design templates to slides.
6. Hyper link the slides (use text for link).
7. Use action buttons for hyperlink.
8. Create a PowerPoint presentation that contains News Headlines for a TV channel.
9. Create a presentation with minimum 5 slides regarding the programmes on Annual Day celebrations.
10. Create a presentation with minimum 5 slides regarding various products offered by a particular company.

Unit 5

Simple business case studies using the software tools.

Course Outcomes

TEXTBOOK:

Alexis Leon & Mathews Leon: Fundamentals of Information Technology, Vikas Publishing

REFERENCE BOOKS:

1. Microsoft Office 2000 Complete, BPB publications

2. Dennis P.Curtin, Kim Foley, Kunal Sen, Cathleen Morin : Information Technology The Breaking Wave, TATA McGraw-Hill Edition

18CUL101 CULTURAL EDUCATION I 2 0 0 2

Unit 1

Introduction to Indian Culture - Introduction to Amma‟s-Symbols life and Teac of Indian Culture.

Unit 2

Science and Technology in Ancient India - Education in Ancient India - Goals of Life –Purusharthas - Introduction to Vedanta and Bhagavad Gita.

Unit 3

Introduction to Yoga - Nature and Indian Culture - Values from Indian History - Life and work of Great Seers of India.

Course Outcomes

CO1: Gain a positive appreciation of Indian culture, traditions, customs and practices

CO2: Understand the foundational concepts of Indian civilization like purusharthas, law of karma, etc, which contributes towards personality growth.

CO3: Understand the cultural ethos of Amrita Vishw holistic education

CO4: Imbibe spirit of living in harmony with nature

CO5: Get guidelines for healthy and happy living from the great spiritual masters

TEXTBOOKS:

1. The Glory of India (in-house publication)

2. The Mother of Sweet&Teachings)Bliss, (Amma"s Life

18ENG121 Professional Communication 1- 0-2-2

Objectives:

To convey and document information in a formal environment; to acquire the skill of self projection in professional circles; to inculcate critical and analytical thinking.

Unit I

Vocabulary Building: Prefixes and Suffixes; One word substitutes, Modal auxiliaries,Error Analysis: Position of Adverbs, Redundancy, misplaced modifiers**,** Dangling modifiers –Reported Speech

Unit II

Instruction, Suggestion & Recommendation - Sounds of English: Stress, Intonation

- Essay writing: Analytical and Argumentative

Unit III

Circulars, Memos –Business Letters - e - mails

Unit IV

Reports: Trip report, incident report, event report - Situational Dialogue - Group Discussion

Unit V

Listening and Reading Practice - Book Review

Course Outcomes

CO1: Demonstrate competency in oral and written communication

CO2: Apply different styles of communication in professional context

CO3: Participate in different planned & extempore communicative activities

CO4: Interpret and discuss facts and information in a given context

CO5: Develop critical and analytical thinking

18MAT122 Real Analysis 3-1-0-4

Unit 1:

Sets and Functions –Mathematical Induction –Finite and Infinite Sets –The Algebraic and Order Properties of $\mathbb{R}$ –AbsoluteValue and Real Line –The Completeness Property of $\mathbb{R}$ –Applications of the Supremum Property –Applications of the Supremum Property, Intervals. (Text Book: Chapter 1, 2- Sec: 1.1 to 1.3 and 2.1 to 2.5)

Unit 2:

Sequence and Series: Sequences and their Limits –Limits Theorems –Monotone sequences –Subsequences and Balzano –Weierstrass Theorem. The Cauchy criterion –Properly divergence sequences –Introduction to series –Absolute Convergence –Tests for Absolute Convergence –Tests for Non absolute Convergence. (Text Book : Chapter 3, 9- Sec: 3.1 to 3.7 and Sec: 9.1 to 9.3).

Unit 3:

Limits of Functions –Limit Theorem –Some Extensions of the Limit Concept –Continuous Functions –Combinations of Continuous Functions –Continuous Functions on Intervals –Uniform Continuity –Continuity and Gauges –Monotone and Inverse Functions (Text Book : Chapter 4, 5- Sec: 4.1 to 4.3 and

Sec: 5.1 to 5.6).

Unit 4:

The Derivative –The Mean Value Theorem –L'Hospital Rules–Taylor's Theorem (Text Book : Chapter 6- Sec: 6.1 to 6.4).

Unit 5:

The Riemann Integral –Riemann Integrable Functions –The Fundamental Theorem –Approximate Integration (Text Book : Chapter 7- Sec: 7.1 to 7.4).

Course Outcomes

CO1: Understanding the set theoretic statements and the completeness property of R.

CO2: Understanding the concepts of sequences, series and Limits. Apply the tests for convergence, absolute convergence and analysing the convergence criteria.

CO3: Defining Limits, continuity and monotonicity of a function and understanding the theorems related to them.

CO4: Understanding the concepts of extreme valu for approximating functions.

CO5: Understanding Riemann Sum and apply it to approximate integrations.

18MAT111 Groups and Rings 3 1 0 4

Unit 1

Sets-Operations on Sets and their properties, equivalence relation, Mappings-injective and surjective mapping, composition of mappings and its properties, the Integers–Euclidean Algorithm, Unique factorization theorem and congruence modulo of a given integer. **(Sec. 1.1 to 1.3)**

Unit 2

Definition of Groups, Basic Examples of Groups including Symmetric Groups, Matrix Groups, Groups of Rigid Motions of a Plane, Finite Groups of Motions, Subgroups, Cyclic Group and Factor Groups, Lagrange‟s. **(Sec**Theorem**.2.1to2.5)**

Unit 3

Normal Subgroups. Quotients of Groups, Homomorphisms, Kernal of a homomorphism, Automorphisms, Cauchy‟s Theorem and Sylow‟sCayley‟sTheoremTheorefor

Permutation Groups. **(Sec. 2.6 to 2.10)**

Unit 4

Definition of Rings, Examples including Polynomial Rings, Formal Power Series Rings, Matrix Rings and Group Rings. Commutative Rings, Integral Domain, Division Ring, Characteristics of an Integral domain, Fields. **(Sec. 3.1 to 3.2)**

Unit 5

Homomorphisms, kernel, Isomorphism, Ideals, Quotient Rings. **(Sec. 3.3 to 3.4)**

Course Outcomes

CO-1: To understand sets, functions, types of functions and operations on functions; To familiarize the fundamental properties of integers.

CO-2: To understand the axioms in the definition of a group through examples; to understand Subgroups/ Cyclic Groups / Factor Groups and identify them; to understand and apply Lagrange‟s Theorem.

CO-3: To familiarize normal subgroup and its properties; to understand the proofs of Cauchy / Cayley‟s Theorems and their relevance.

CO-4: To understand the axioms in the definition of a ring/ integral domain / division ring through examples.

CO-5: To familiarize the concept of mapping between rings; to understand ideals and quotient rings and their relevance.

18CSA116 ADVANCED COMPUTER PROGRAMMING 3 0 0 3

Unit 1

Structures: structures variables - declaration, bit fields, initialization and operation on structures, typedef, nested arrays and structures: arrays in structures, nested structures, arrays of structures.

Unit2

Pointers–Declarations, Passing arguments by call by reference, Functions returning pointer, Pointer Arithmetic. Pointer to pointer, Pointers and Arrays –pointer to array, array of pointers, Dynamic memory allocation – malloc(), calloc(), deallocation: free(), dangling pointers.

Unit 3

Pointers and structures, structures and functions: passing structure as argument and returning structure from

functions, self-referential structure, unions.

Unit 4

Files - file pointers, standard streams and redirection, text files, binary files, file operations: open, mode, close; Input and output - character I/O, line I/O, formatted I/O. Random file access, Command line arguments.

Unit 5

Preprocessor –Macros. User defined libraries and headers, introduction to the graphics library.

Course Outcomes

CO	Description
CO1	Understand the way of representing, retrieving and processing Heterogeneous data using structures.
CO2	Understand the memory representations of the given data and its manipulation.
CO3	Understand the methods of storing data using files.
CO4	Develop programs using predefined and user defined libraries..

18CHY113 CHEMISTRY 3 0 0 3

Unit 1 Chemical Bonding

Review of orbital concept and electronic configuration, electrovalency and ionic bond formation, ionic compounds and their properties, lattice energy, solvation enthalpy and solubility of ionic compounds, covalent bond, covalency, orbital theory of covalency –sigma and pi bonds - formation of covalent compounds and their properties Hybridization and geometry of covalent molecules - VSEPR theory - polar and non-polar covalent bonds, polarization of covalent bond - polarizing power, polarisability of ions and Fajan‟s rule, dipole moment, percentage ionic ch of molecules - co-ordinate covalent compounds and their characteristics, molecular orbital theory for H2,
N2, O2 and CO, metallic bond - free electron, valence bond and band theories, weak chemical bonds –inter and intra molecular hydrogen bond - van der Waals forces.

Unit 2 Thermodynamic Parameters

Stoichiometry - mole concept, significance of balanced chemical equation –simple calculations - Conditions for occurrence of chemical reactions - enthapy, entropy and free changes –spontaneity –Thermochemistry - heats of reactions - (formation, combustion, neutralization) - specific heats - variation of enthalpy change with temperature - Kirchhoff‟ relation-bondenthalpy(integratedandbondorder-Problemsform)basedon the above.

Review of molecularity and order of a reaction, rate law expression and rate constant - first, second, third and zero order reactions, pseudo-first order reactions (pseudo-unimolecular reactions) - complex reactions - equilibrium and steady state approximations - mechanism of these reactions - effect of temperature on reaction rates - Arrhenius equation and its significance, Michaelis Menden kinetics - enzyme catalysis.

Unit 4 Electrochemistry

Electrolytes - strong and weak, dilution law, Debye-Huckel theory, faraday‟stial,single law electrode potential, electrochemical series, electrochemical cells, Nernst equation and its application,
reference electrodes - SHE, Ag/AgCl, Calomel.

Unit 5 Photochemistry

Photochemistry, laws of photochemistry - Stark-Eistein law, Beer-Lamberts law, quantum efficiency-determination, photochemical processes - Jablonsky diagram, internal conversion, inter-system crossing, fluorescence, phosphorescence, chemiluminescence and photo sensitization, photopolymerization**.**

18COM116 BASICS OF ACCOUNTING 3 0 0 3

Objective: *To provide a basic knowledge on the important terms and basic concepts of financial accounting.*

Unit 1

Business –Scope –Business Transactions –Book Keeping –meaning, objectives and functions –Accounting –meaning, functions and importance, distinction between book keeping and accounting –objectives of accounting –users of accounting –branches of accounting –advantages and limitations of accounting – accounting terminologies –Accounting Concepts and Conventions –Accounting Standards in India.

Unit 2

Accounting Systems –Double Entry System and Single Entry System –Account –types of accounts –Rules for Debit and Credit –Accounting Equation –Journal –Journal entries –journalizing –compound entries – Banking transactions.

Unit 3

Sub-Divisions of Journal or Subsidiary Books: Advantages of Subsidiary Books and limitations of journal – Purchase Day Book –Purchase Returns Book –Sales Book –Sales Returns Book –Cash Book –Petty Cash Book –Imprest System

[Overview Only]

Unit 4

Ledger: Meaning and importance –preparation of ledger accounts or posting –balancing an account – account balance –Trial Balance –objectives and functions of trial balance.

Unit 5

Preparation of Final Accounts –simple adjustments like outstanding expenses, prepaid adjustments like outstanding expenses, prepaid expenses, bad debts, accrued income, unearned income. Depreciation: Meaning and for definition –causes of depreciation –need depreciation –Fixed Installment Method and Diminishing Balance Method

TEXTBOOKS:

18CSA181 ADVANCED COMPUTER PROGRAMMING LAB 002 1

Programs to demonstrate functions call by reference and returning values by reference. Programs using pointer arithmetic operations and handling pointers. Programs to demonstrate dynamic memory allocation and de-allocation. Programs to show structure and union operations. Programs using files, command line arguments and macros. Programs using user defined libraries and graphics library.

Course Outcomes

CO	Description
CO1	Develop programs using efficient methods for storing and handling heterogeneous data.
CO2	Develop programs by handling heterogeneous data using modularity.
CO3	Develop Computer programs using advanced programming constructs like pointers and dynamic memory allocations.
CO4	Develop program using macros and user defined libraries.

18CHY181 CHEMISTRY LAB 0 0 2 1

1. Acid base titration (double titration)
2. Complexometric titration (double titration)
3. Redox (permanganimetry) titration (double titration)
4. Conductometric titration
5. Potentiometric titration
6. Colourimetric titration

18COM181 ACCOUNTING LAB. 0 0 2 1

Objective: *To give an understanding on the application of Tally Software.*

Unit 1

Getting started with Tally –Company information –Features and configuration.

Unit 2

Tally accounting - Chart of accounts –Ledgers and Groups.

Unit 3

Vouchers –Financial and Trading vouchers - advanced voucher entry.

Unit 4

Display and reporting –reporting and printing.

Unit 5

Budgeting –Interest Calculations –Banking.

Course Outcomes

REFERENCE TEXTS:

1. *Tally complete reference material*
2. *Tally for everyone –Roopa, Add to Cart Publishing*
3. *Nadhani –Tally ERP 9 Training Guide –BPB Publication*

18CUL111 CULTURAL EDUCATION II 2 0 0 2

Unit 1

1. Relevance of Sri Rama and Sri Krishna in this Scientific Age
2. Lessons from the Epics of India
3. Ramayana & Mahabharata

Unit 2

4. Who is a Wise Man?
5. A Ruler‟s Dharma

6. The Story of King Shibi

Unit 3

7. Introduction to the Bhagavad Gita
8. Bhagavad Gita –Action without Desire

Unit 4

9. Role and Position of Women in India
10. The Awakening of Universal Motherhood

Unit 5

11. Patanjali‟sAstanga-YogaSystemforPersonalityRefinement
12. Examples of Heroism and Patriotism in Modern India

Course Outcomes

CO1: Get an overview of India and her contribution to the world in the field of science and literature

CO2: Understand the foundational concepts of ancient Indian education system and practices associated with them

CO3: Learn the important concepts of Vedas, Bhagavad-Gita and Yogasutras and their relevance to daily life

CO4: Familiarize themselves with the inspirational characters and anecdotes from the epics and Indian history

CO5: Gain a rational understanding of the underlying principles of Indian spirituality

TEXTBOOKS:

1. *Common Resource Material II (in-house publication)*
2. *Sanatana Dharma - The Eternal Truth (A compilation of Am*

18MAT203 Rings, Vector Spaces and Fields 3 1 0 4

Unit 1

Maximal Ideals, the Field of Quotients of an Integral Domain, Euclidean Rings, Principal Ideal, Unit Element, Greatest Common Divisor, Prime Elements, Unique Factorization Theorem. **(Sec. 3.5 to 3.7)**

Unit 2

The ring of Gaussian integers, –Fermat‟sF[x],Degreeof a Theor
Polynomial, The Division Algorithm, Principal Ideal Ring, Irreducible Polynomial a principal ideal ring,

Irreducible polynomial. **(Sec. 3.8 to 3.9)**

Unit 3

Definition of vector spaces and Examples, Subspace, Homomorphism, Isomorphism, Quotient Space, Internal and External Direct Sum, Linear Independence and Bases, Dimension of a Vector Space, Dual Spaces. **(Sec. 4.1 to 4.3)**

Unit 4

Sub Fields, Field Extensions, Finite Extensions, Algebraic Extensions and Their Properties. The Transcendence of „e". (Sec. 5.1 to 5.2)

Unit 5

Roots of Polynomials, Remainder Theorem, Splitting Field and its Uniqueness, The concept of constructible numbers and its Applications, Distinct and Multiple Roots, Simple Extension of a Field. **(Sec. 5.3, 5.4, 5.5).**

Course Outcomes

CO-1: To understand the construction of field from integral domain; familiarize the concept of Euclidean domain through standard examples, and derive results in number theory.
CO-2: To familiarize the concept of polynomial rings and its properties.

CO-3: To understand the axioms in the definition of a vector space through examples; to understand Subspaces / Quotient Space / mappings and identify them; To familiarize the concept of basis and its relevance.
CO-4: To understand the field extensions and in particular finite extensions/algebraic extensions and their properties/applications.
CO-5: To construct the splitting fields of polynomials.

Note: The Problems are to be referred from Reference Book 1.

18MAT204 Real Analysis in Higher Dimension 3-1-0-4

Unit 1

Elements of Point Set Topology: Introduction –Euclidean Space $\mathbb{R}^n$ - Open balls and open sets in $\mathbb{R}^n$ - The

structure of open sets in R^1 - Closed sets –Adherent points, Accumulation points –Closed sets and adherent points –The Bolzano-Weierstrass theorem –The Cantor intersection theorem –Lindel of covering theorem –Heine-Borel covering theorem –Compactness in R^n –Metric Spaces –Point set topology in metric spaces –Compact subsets of a metric space –Boundary of a set.

Chapter 3: Sections 3.1 to 3.16

Unit 2

Limits and Continuity: Introduction –Convergent sequences in a metric space –Cauchy sequences – Complete metric Spaces –Limit of a function –Limits of vector –valued functions - Continuous functions – Continuity of composite functions –Continuous vector-valued functions.
Chapter 4: Sections 4.1 to 4.5, 4.7 to 4.10.

Unit 3

Limits and Continuity: Examples of continuous functions –Continuity and inverse images of open or closed sets –Functions continuous on compact sets –Topological mappings (homeomorphisms) - Bolzano‟s theorem – Connectedness –Components of a metric space –Arcwise connectedness –Uniform continuity –
Uniform continuity and compact sets –Fixed-point theorem for contractions –Discontinuities of real-valued functions –Monotonic functions.
Chapter 4: Sections 4.11 to 4.23

Unit 4

Derivatives: Introduction –Definition of derivative –Derivatives and continuity –Algebra of derivatives – The chain rule –One-sided derivatives and infinite derivatives –Functions with nonzero derivative –Zero derivatives and local extrema –Rolle‟s–ThetheoremMean-valuetheorem for derivatives –Intermediate-value theorem for derivatives.
Chapter 5: Sections 5.1 to 5.11

Unit 5

Functions of Bounded Variation: Introduction, Properties of monotonic functions, Functions of bounded variation, Total Variation, Additive property of total variation, Total variation on $[a, x]$ as a function of x. Functions of bounded variation expressed as the difference of increasing functions, Continuous functions of bounded variation.
(Chapter 6: 6.1-6.8)

Course Outcomes

CO1- Understanding the point set Topology in Metric space and related theorems.
CO2- Analyzing and Understanding the Limits and Continuity of a scalar and vector valued functions in Metric space.
CO3- Understanding topological mappings, uniform continuity and fixed point theorem.
CO4- Applying the concept of derivatives for identifying extreme values of a real valued function and understanding the related theorems.
CO5- Understanding total variation and bounded variation.

18MAT115 VECTOR CALCULUS 3 1 0 4

Unit-1

Calculus of vector-valued functions: Vector-valued functions of a real variable-Algebraic operations. Components- Limits, derivatives and integrals-Applications to curves. Tangency- Applications to curvilinear motion-Velocity, speed and acceleration-The unit tangent, the principal normal -The definition of arc length. Vol.1, Chapter 14- Sec. 14.1 to 14.10.

Unit-2

Differential calculus of scalar and vector fields: Functions of R^n toR^m.Scalar and vector fields-Open balls and open sets-Limits and continuity-The derivative of a scalar field with respect to a vector-Directional derivatives and partial derivatives-Partial derivatives of higher order-Directional derivatives and continuity-The total derivative-The gradient of a scalar field-A chain rule for derivatives of scalar fields- Applications to geometry. Level sets. Tangent planes
Vol.2, Chapter-8-Sec. 8.1 to 8.17.

Unit-3

Line Integrals: Introduction-Paths and line integrals-Other notations for line integrals-Basic properties of line integral-Open connected sets. Independence of paths-The second fundamental theorem of calculus for line integrals-The first fundamental theorem of calculus for line integrals-Necessary and sufficient conditions for a vector field to be gradient-Necessary conditions for a vector field to be gradient-Special methods for constructing potential functions.
Vol.2, Chapter-10-Sec 10.1 to 10.5, 10.10 and 10.11, 10.14 to10.18.

Unit-4

Multiple Integrals: Introduction-Green"s theorem-Someinapplicationstheplane-A of G necessary and sufficient condition for a two-dimensional vector field to be a gradient-Change of variables in

double integral-Special cases of transformation formula.
Vol.2, Chapter-11-Sec. 11.19 to 11.22, 11.26 to 11.28.

Unit-5

Surface Integrals: Parametric representation of a surface-The fundamental vector product- The fundamental vector product as a normal to the surface-Surface integrals-Other notations for surface integrals-The theorem of Stokes-The curl and divergence of a vector field- Further properties of the curl and divergence-

The divergence theorem (Gauss‟ theorem)
Vol.2, Chapter-12-Sec. 12.1 to 12.4, 12.7,12.9 to12.15, 12.19 and 12.21.

Course Outcomes

CO-1: Understand the basic concepts of vector valued functions, their limits, derivatives and integrals and its geometrical and physical interpretations.

CO-2: Understand the concepts of scalar and vector fields, their limits, derivatives and their applications.

CO-3: Understand the concepts of line integrals and its path independence.

CO-4: Understand and apply the concepts of double integrals to var theorem for plane..

CO-5: Understand the concepts of surface integrals

18MAT201 DIFFERENTIAL EQUATIONS 3 1 0 4

Unit 1

Review of differential equations (order, degree, linear, nonlinear, implicit and explicit form of solution, general solutions, particular solution, singular solution). Exactness, nonexact equations reduce to exact form. Part I: 1.1-1.9, 2.12-2.22 (5 hours)

Equations solvable for $\frac{dy}{dx}$, y, x, equations in Clairaut‟s form, eq
Part I: 4.1-4.11 (4 hours)

Unit 2

Linear homogeneous differential equations with constant coefficients, Euler- Cauchy equation, Linear Nonhomogeneous Differential Equations: Wronskian, linear independence, Method of undetermined coefficients. Method of variation of parameters.
Part I: 5.1-5.5, 6.1-6.3, 1.12,1.13, 5.26-5.27, 7.1-7.5 (9 hours)
Unit 3

Conversion of nth order differential equation to n first order differential equations, homogeneous linear system with constant coefficients, fundamental matrices, complex eigen values, repeated eigenvalues. simultaneous linear differential equations with constant coefficients, simultaneous linear differential equations with variable coefficients,
PART I: 8.1-8.3, 2.1- 2.7(8 hours)
Review of partial differential equations (order, degree, linear, nonlinear).

Unit 4

Formation of equations by eliminating arbitrary constants and arbitrary functions.
General, particular and complete integrals.Lagran the first order partial differential equations of the forms f(p,q) = 0, f(z,p,q) = 0, $f_1(x,p) = f_2(y,q)$ and Cla

form z = px + qy + f(p,q) where $p = \frac{\partial z}{\partial x}$ and $q = \frac{\partial z}{\partial y}$.
Part III: 1.1 –1.5, 2.3-2.12, 3.1-3.2, 3.7-3.8, 3.10-3.18 (13 hours)

Unit 5

Homogeneous linear partial differential equations with constant coefficient of higher order. Non-homogeneous linear partial differential equations of higher order, method of separation of variables.
Part III: 4.1-4.12 (13 hours)

Course Outcomes

CO-1: Understand the basic concepts of differential equations and solve the various forms of differential equations.

CO-2: Understand the concepts and solve the linear homogeneous/non homogeneous differential equations with constants and variable coefficients.

CO-3: Understand the concepts and solve the nth order differential equation and simultaneous linear differential equations with constant and variable coefficients.

CO-4: Understand the concepts of partial differential equations and solve the first order PDE.

CO-5: Understand the concepts and solve the linear homogeneous/non homogeneous parital differential equations with constants coefficients.

TEXT BOOK:

18MAT206 STATICS 2 1 0 3

Unit 1

Forces –Resultants - Law of parallelogram of forces –Triangle of Forces –Polygon of Forces –Lami‟s theorem – Resolution of forces –Any number of forces acting on a point –Conditions of Equilibrium.

Unit 2

Like Parallel forces –Unlike Parallel forces –Moments –Varignon‟s theorem–Generalizedof Mo theorem of Moments – Couples –Definition –Equilibrium of couples –resultant of coplanar couples.

Unit 3

Equilibrium of three forces acting on a rigid body –three coplanar forces –conditions of equilibrium – Coplanar forces –Reduction of coplanar forces –Equation to the line of action of the resultant.

Unit 4

Forces of friction –Laws of Friction –Limiting Friction –Limiting equilibrium –Cone of Friction –Angle of Friction –Centre of Gravity –Centre of Gravity of a thin uniform rod –Centre of Gravity of a thin plate or Lamina in the form of a parallelogram –Centre of Gravity of a uniform triangular Lamina –Centre of Gravity of three rods forming a triangle –General formulae for determination of the Centre of Gravity – Centre of Gravity by Integration.

Unit 5

Equation to Common Catenary –Tension at any point –Geometrical properties of Common Catenary.

Course Outcomes

CO1: Understand the basic concepts and theorems of forces, resultants and equilibrium.
CO2: Understand the concepts and related theorems on moments and couples of forces.
CO3: Implementing the concepts of forces to study the coplanar behaviour of forces.
CO4: Understand the forces of friction and centre of gravity.
CO5: Understand the equation for common catenary and its geometrical properties.

18ENV300 ENVIRONMENTAL SCIENCE AND SUSTAINABILITY 3 0 0 3

Unit 1

State of Environment and Unsustainability, Need for Sustainable Development, Traditional conservation systems in India, People in Environment, Need for an attitudinal change and ethics, Need for Environmental Education, Overview of International Treaties and Conventions, Overview of Legal and Regulatory Frameworks.

Environment: Abiotic and biotic factors, Segments of the Environment, Biogeochemical Cycles, Ecosystems (associations, community adaptations, ecological succession, Food webs, Food chain, ecological pyramids), Types of Ecosystems –Terrestrial ecosystems, Ecosystem Services, Economic value of ecosystem services, Threats to ecosystems and conservation strategies.

Biodiversity: Species, Genetic & Ecosystem Diversity, Origin of life and significance of biodiversity, Value of Biodiversity, Biodiversity at Global, National and Local Levels, India as a Mega-Diversity Nation (Hotspots) & Protected Area Network, Community Biodiversity Registers. Threats to Biodiversity, Red Data book, Rare, Endangered and Endemic Species of Ind

Impacts, causes, effects, control measures, international, legal and regulatory frameworks of: Climate Change, Ozone depletion, Air pollution, Water pollution, Noise pollution, Soil/ land degradation/ pollution

Unit 2

Linear vs. cyclical resource management systems, need for systems thinking and design of cyclical systems, circular economy, industrial ecology, green technology.

Specifically apply these concepts to: Water Resources, Energy Resources, Food Resources, Land & Forests, Waste management.

Discuss the interrelation of environmental issues with social issues such as: Population, Illiteracy, Poverty, Gender equality, Class discrimination, Social impacts of development on the poor and tribal communities,

Conservation movements: people‟s movementssystemsandtraditionsand ac of conservation.

Unit 3

Common goods and public goods, natural capital/ tragedy of commons, Cost benefit analysis of development projects, Environment Impact Assessment (EIA), Environment Management Plan (EMP), Green business, Eco-labeling, Problems and solutions with case studies.

Global and national state of housing and shelter, Urbanization, Effects of unplanned development case studies, Impacts of the building and road construction industry on the environment, Eco-homes/ Green buildings, Sustainable communities, Sustainable Cities.

Ethical issues related to resource consumption, Intergenerational ethics, Need for investigation and resolution of the root cause of unsustainability, Traditional value systems of India, Significance of holistic

value-based education for true sustainability.

Course Outcomes

CO1: Integrate facts and concepts from ecological, physical and social sciences to characterize some common socio-environmental problems.

CO2: Develop simple integrated systems and frameworks for solving common interconnected socio-environmental problems.

CO3: Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

CO4: Identify the ethical underpinnings of socio-environmental issues in general.

18SSK201 LIFE SKILLS I 1 0 2 2

Soft skills and its importance: Pleasure and pains of transition from an academic environment to work-environment. Need for change. Fears, stress and competition in the professional world. Importance of positive attitude, self-motivation and continuous knowledge upgradation.

Self Confidence: Characteristics of the person perceived, characteristics of the situation, Characteristics of the Perceiver. Attitude, Values, Motivation, Emotion Management, Steps to like yourself, Positive Mental Attitude, Assertiveness.

Presentations: Preparations, Outlining, Hints for efficient practice, Last minute tasks, means of effective presentation, language, Gestures, Posture, Facial expressions, Professional attire.

Vocabulary building: A brief introduction into the methods and practices of learning vocabulary. Learning how to face questions on antonyms, synonyms, spelling error, analogy etc. Faulty comparison, wrong form of words and confused words like understanding the nuances of spelling changes and wrong use of words.

Listening Skills: The importance of listening in communication and how to listen actively.

Prepositions and Articles: A experiential method of learning the uses of articles and prepositions in sentences is provided.

Problem solving; Number System; LCM &HCF; Divisibility Test; Surds and Indices; Logarithms; Ratio, Proportions and Variations; Partnership; Time speed and distance; work time problems;

Data Interpretation: Numerical Data Tables; Line Graphs; Bar Charts and Pie charts; Caselet Forms; Mix Diagrams; Geometrical Diagrams and other forms of Data Representation.

Logical Reasoning: Family Tree; Linear Arrangements; Circular and Complex Arrangement; Conditionalities and Grouping; Sequencing and Scheduling; Selections; Networks; Codes; Cubes; Venn Diagram in Logical Reasoning.

18AVP201 / Amrita Values Programme I / 1 0 0 1

18AVP211 Amrita Values Programme II 1 0 0 1

Amrita University's Amrita Values Programme (AVP) is a new initiative to give exposure to students about richness and beauty of Indian way of life. India is a country where history, culture, art, aesthetics, cuisine and nature exhibit more diversity than nearly anywhere else in the world.

Amrita Values Programmes emphasize on making students familiar with the rich tapestry of Indian life, culture, arts, science and heritage which has historically drawn people from all over the world.

Students shall have to register for any two of the following courses, one each in the third and the fourth semesters, which may be offered by the respective school during the concerned semester.

Courses offered under the framework of Amrita Values Programmes I and II

Message from Amma's Life for the Modern World

Amma‟s messages can be put to action in t processourin life a positive and creative manner. Every single word Amma speaks and the guidance received in on matters

which we consider as trivial are rich in content and touches the very inner being of our personality. Life gets

enriched by Amma‟sndSheteachesguidanceustheartofexemplaryalife skills where we become witness to all the happenings around us still keeping the balance of the mind.

Lessons from the Ramayana

Introduction to Ramayana, the first Epic in the world –Influence of Ramayana on Indian values and culture –Storyline of Ramayana –Study of leading characters in Ramayana –Influence of Ramayana outside India –Relevance of Ramayana for modern times.

Lessons from the Mahabharata

Introduction to Mahabharata, the largest Epic in the world –Influence of Mahabharata on Indian values and culture –Storyline of Mahabharata –Study of leading characters in Mahabharata –Kurukshetra War and its significance - Relevance of Mahabharata for modern times.

Lessons from the Upanishads

Introduction to the Upanishads: Sruti versus Smrti - Overview of the four Vedas and the ten Principal Upanishads - The central problems of the Upanishads –The Upanishads and Indian Culture –Relevance of Upanishads for modern times –A few Upanishad Personalities: Nachiketas, SatyakamaJabala, Aruni, Shvetaketu.

Message of the Bhagavad Gita

Introduction to Bhagavad Gita –Brief storyline of Mahabharata - Context of Kurukshetra War –The anguish of Arjuna –Counsel by Sri. Krishna –Key teachings of the Bhagavad Gita –Karma Yoga, Jnana Yoga and Bhakti Yoga - Theory of Karma and Reincarnation –Concept of Dharma –Concept of Avatar - Relevance of Mahabharata for modern times.

Life and Message of Swami Vivekananda

Brief Sketch of Swami–Meeting Vivekananda‟swithGuru–DiscipliningofNarendraLife-Travel across India - Inspiring Life incidents –Address at the Parliament of Religions –Travel in United States and Europe – Return and reception India –Message from Swamiji‟s life.

Life and Teachings of Spiritual Masters India

Sri Rama, Sri Krishna, Sri Buddha, Adi Shankaracharya, Sri Ramakrishna Paramahamsa, Swami Vivekananda, Sri Ramana Maharshi, Mata Amritanandamayi Devi.

Insights into Indian Arts and Literature

The aim of this course is to present the rich literature and culture of Ancient India and help students appreciate their deep influence on Indian Life - Vedic culture, primary source of Indian Culture –Brief introduction and appreciation of a few of the art forms of India - Arts, Music, Dance, Theatre.

Yoga and Meditation

The objective of the course is to provide practical training in YOGA ASANAS with a sound theoretical base and theory classes on selected verses of Patanja includes the effect of yoga on integrated personality development.

Kerala Mural Art and Painting

Mural painting is an offshoot of the devotional tradition of Kerala. A mural is any piece of artwork painted

or applied directly on a wall, ceiling or other large permanent surface. In the contemporary scenario Mural painting is not restricted to the permanent structures and are being done even on canvas. Kerala mural paintings are the frescos depicting mythology and legends, which are drawn on the walls of temples and churches in South India, principally in Kerala. Ancient temples, churches and places in Kerala, South India, display an abounding tradition of mural paintings mostly dating back between the 9th to 12th centuries when

this form of art enjoyed Royal patronage. Learning Mural painting through the theory and practice workshop is the objective of this course.

Course on Organic Farming and Sustainability

Organic farming is emerging as an important segment of human sustainability and healthy life. Haritamritam‟ is an attemptwithbasicskills intotraditionempoweroforganicfarmingtheand to youth revive the culture of growing vegetables that one consumes, without using chemicals and pesticides. Growth

of Agriculture through such positive initiatives will go a long way in nation development. In Amma‟s wor “it is a big step in restoring the lost harmony o

Benefits of Indian Medicinal Systems

Indian medicinal systems are one of the most ancient in the world. Even today society continues to derive enormous benefits from the wealth of knowledge in Ayurveda of which is recognised as a viable and sustainable medicinal tradition. This course will expose students to the fundamental principles and philosophy of Ayurveda and other Indian medicinal traditions.

Traditional Fine Arts of India

India is home to one of the most diverse Art forms world over. The underlying philosophy of Indian life is

„Únity in Diversity” and it has led to the most d are an expression of devotion by the devotee towards the Lord and its influence in Indian life is very

pervasive. This course will introduce students to the deeper philosophical basis of Indian Art forms and attempt to provide a practical demonstration of the continuing relevance of the Art.

Science of Worship in India

Indian mode of worship is unique among the world civilisations. Nowhere in the world has the philosophical idea of reverence and worshipfulness for everything in this universe found universal acceptance as it in India. Indian religious life even today is a practical demonstration of the potential for realisation of this profound truth. To see the all-pervading consciousness in everything, including animate and inanimate, and constituting society to realise this truth can be seen as the epitome of civilizational excellence. This course will discuss the principles and rationale behind different modes of worship prevalent in India.

Temple Mural Arts in Kerala

The traditional percussion ensembles in the Temples of Kerala have enthralled millions over the years. The splendor of our temples makes art enthusiast spellbound, warmth and grandeur of color combination sumptuousness of the outline, crowding of space by divine or heroic figures often with in vigorous movement are the characteristics of murals.

The mural painting specially area visual counterpart of myth, legend, gods, dirties, and demons of the

theatrical world, Identical myths are popular the birth of Rama, the story of Bhīma and Hanum Kirata, and the Jealousy of Uma and ganga the mural painting in Kerala appear to be closely related to, and

influenced by this theatrical activity the art historians on temple planes, wood carving and painting the architectural plane of the Kerala temples are built largely on the pan-Indians almost universal model of the Vasthupurusha.

Organic Farming in Practice

Organic agriculture is the application of a set of cultural, biological, and mechanical practices that support the cycling of farm resources, promote ecological balance, and conserve biodiversity. These include maintaining and enhancing soil and water quality; conserving wetlands, woodlands, and wildlife; and

avoiding use of synthetic fertilizers, sewage sludge, irradiation, and genetic engineering. This factsheet provides an overview of some common farming practices that ensure organic integrity and operation sustainability.

Ayurveda for Lifestyle Modification:

Ayurveda aims to integrate and balance the body, mind, and spirit which will ultimately leads to human happiness and health. Ayurveda offers methods for finding out early stages of diseases that are still undetectable by modern medical investigation. Ayurveda understands that health is a reflection of when a person is living in harmony with nature and disease arises when a person is out of harmony with the cycles of nature. All things in the universe (both living and nonliving) are joined together in Ayurveda. This leaflet endow with some practical knowledge to rediscover our pre- industrial herbal heritage.

Life Style and Therapy using Yoga

Yoga therapy is the adaptation of yogic principles, methods, and techniques to specific human ailments. In its ideal application, Yoga therapy is preventive in nature, as is Yoga itself, but it is also restorative in many instances, palliative in others, and curative in many others. The therapeutic effect comes to force when we practice daily and the body starts removing toxins and the rest is done by nature.

Insights into Indian Classical Music

The course introduces the students into the various terminologies used in Indian musicology and their explanations, like Nadam, Sruti, Svaram – svara nomenclature, Stayi, Graha, Nyasa, Amsa, Thala,-Saptatalas and their angas, Shadangas, Vadi, Samavadi, Anuvadi. The course takes the students through Carnatic as well as Hindustani classical styles.

Insights into Traditional Indian Painting

The course introduces traditional Indian paintings in the light of ancient Indian wisdom in the fields of aesthetics, the Shadanga (Sixs limbs of Indian paintings) and the contextual stories from ancient texts from where the paintings originated. The course introduces the painting styles such as Madhubani, Kerala Mural, Pahari, Cheriyal, Rajput, Tanjore etc.

Insights into Indian Classical Dance

The course takes the students through the ancient Indian text on aesthetics the Natyasastra and its commentary the AbhinavaBharati. The course introduces various styles of Indian classical dance such as Bharatanatyan, Mohiniyatton, Kuchipudi, Odissy, Katak etc. The course takes the students through both contextual theory as well as practice time.

Indian Martial Arts and Self Defense

The course introduces the students to the ancient Indian system of self-defense and the combat through various martial art forms and focuses more on tr introduces the various exercise technique to make the body supple and flexible before going into the steps
and techniques of the martial art. The advanced level of this course introduces the technique of weaponry.

Social Awareness Campaign

The course introduces the students into the concept of public social awareness and how to transmit the messages of social awareness through various media, both traditional and modern. The course goes through the theoretical aspects of campaign planning and execution.

Temple Mural Arts in Kerala

The traditional percussion ensembles in the Temples of Kerala have enthralled millions over the years. The splendor of our temples makes art enthusiast spellbound, warmth and grandeur of color combination sumptuousness of the outline, crowding of space by divine or heroic figures often with in vigorous movement are the characteristics of murals.

The mural painting specially area visual counterpart of myth, legend, gods, dirties, and demons of the theatrical world, Identical myths are popular the

Kirata, and the Jealousy of Uma and ganga the mural painting in Kerala appear to be closely related to, and influenced by this theatrical activity the art historians on temple planes, wood carving and painting the architectural plane of the Kerala temples are built largely on the pan-Indians almost universal model of the vasthupurusha.

Organic Farming in Practice

Organic agriculture is the application of a set of cultural, biological, and mechanical practices that support the cycling of farm resources, promote ecological balance, and conserve biodiversity. These include maintaining and enhancing soil and water quality; conserving wetlands, woodlands, and wildlife; and avoiding use of synthetic fertilizers, sewage sludge, irradiation, and genetic engineering. This factsheet provides an overview of some common farming practices that ensure organic integrity and operation sustainability.

Ayurveda for Lifestyle Modification:

Ayurveda aims to integrate and balance the body, mind, and spirit which will ultimately leads to human happiness and health. Ayurveda offers methods for finding out early stages of diseases that are still undetectable by modern medical investigation. Ayurveda understands that health is a reflection of when a person is living in harmony with nature and disease arises when a person is out of harmony with the cycles of nature. Life Style and Therapy using Yoga

Yoga therapy is the adaptation of yogic principles, methods, and techniques to specific human ailments. In its ideal application, Yoga therapy is preventive in nature, as is Yoga itself, but it is also restorative in many instances, palliative in others, and curative in many others. The therapeutic effect comes to force when we practice daily and the body starts removing toxins and the rest is done by nature.

Course Outcomes

CO1: Understanding the impact of itihasas on Indian civilization with reference to Mahabharata

CO2: Enabling students to appreciate the relevance of Mahabharata and Bhagavad-Gita in the modern world.

CO3: Understanding the four goals of life (Purusharthas) as presented in the Mahabharata

CO4: Assimilating the positive qualities of the characters depicted in the itihasa.

CO5: Analysis of the critical events and turning points in the Mahabharata with emphasis on the underlying values and principles.

18MAT212 Linear Algebra 3 1 0 4

Unit 1

Review: Vector Spaces.

Inner Products, Angle and Orthogonality in Inner Product Spaces, Length of a Vector, Schwarz Inequality, Orthogonal Vectors, Orthogonal Complement, Orthogonal Bases: Gram-Schmidt Process. **(Sec. 4.4)**

Unit 2

The Algebra of Linear Transformations, Characteristic Roots, Invertible Linear transformations, Characteristic Roots, Characteristic Vector, Minimal Polynomial, Matrices, Matrix of a Linear Transformation. **(Sec. 6.1 to 6.3).**

Unit 3

Canonical Forms: Triangular, Nilpotent Transformations, Jordan and Rational Canonical Form, invariant subspaces, cyclic subspaces, Invariants of a nilpotent Linear Transformation **(Sec. 6.4 to 6.7).**

Unit 4

Trace and Transpose, Determinants, Symmetric and Skew Symmetric Matrices, Adjoint and Hermitian Adjoint of a Matrix, Hermitian, Unitary and Normal Transformations, Self Adjoint and Normal Transformations, Real Quadratic Forms. **(Sec. 6.8 to 6.11)**

Unit 5

Problems in Eigen Values and Eigen Vectors, Diagonalization, Orthogonal Diagonalization, Quadratic Forms, Diagonalizing Quadratic Forms, Conic Sections. **(Sec. 7.1 to 7.3 and 9.5 to 9.6 from Reference Book 2)**

The Jordan Form, the generalized eigen vectors **(Appendix B from Reference Book 1)**

Course Outcomes

CO-1: To understand inner products and compute the angle/length of a vector. To construct the orthonormal basis.

CO-2: To familiarize the concept of characteristic roots/ vectors and related properties. To understand a link between linear transformation and matrix.

CO-3: To understand the construction of matrices for a linear transformation in the triangular/Jordan form.

CO-4: To familiarize the types of matrices, understand their properties and apply them in the real quadratic forms.

CO-5: To understand the process of diagonalizing and identify Conic Sections using diagonalization.

18MAT202 Probability and Statistics 3 1 0 4

Unit –I

Sample Space and Events, Interpretations and Axioms of Probability, Addition rules, Conditional Probability, Multiplication and Total Probability rules, Independence, Bayes theorem.
Book 1 : Sections : 2.1-2.8

Unit –II

Discrete Random variables, Probability Distributions and Probability mass functions, Cumulative Distribution functions, mathematical expectation, moment generating function and characteristic function, Standard distributions- discrete distributions- binomial, Poisson and geometric distributions- continuous distributions- uniform, exponential, Gamma, Normal distributions - Chebyshev‟s theorem. Book 1 : Sections : 3.1-3.7.1,4.1-4.8, Book 2 : Section : 4.4

Unit –III

Joint, marginal and conditional probability distributions for discrete and continuous cases, independence, expectation of two dimensional random variables, conditional mean and variance, transformation of one and two random variables.
Book 1 : Section : 5.1, Book 2 : Sections : 7.1-7.2

Unit –IV

Simple linear Regression, Properties of least square estimators, least squares method for estimation of regression coefficients, Correlation, properties of correlation coefficient, rank correlation coefficient.
Book 1 : Sections: 11.2-11.3,11.8

Unit –V

Point Estimation, Sampling Distributions and Central limit theorem, Methods of point estimation: Method of Moments and Method of Maximum likelihood Estimation, - Confidence Interval on the mean of a Normal Distribution with Variance known and unknown, -Confidence interval on the variance and ratio of variances. Confidence interval for Population Proportion.
Book 1 : Sections: 7.1,7.2,7.4,8.1- 8.4

Course Outcomes:

CO1 Understand the basic concepts of probability and probability modeling.
CO2 Gain in-depth knowledge about statistical distributions and their properties
CO3 To apply one and two dimensional statistical distributions to the real time examples.
CO4 To study and apply statistical methods such as correlation and regression to real time problems
CO5 To understand and apply statistical inference problems for point and interval estimation.

18MAT221 NUMERICAL METHODS 2 1 0 3

Unit I:

Roots of Transcendental and Polynomial Equations: Bisection method, Iteration methods based on first degree equation, Rate of convergence, system of nonlinear equations.
Solution of System of Linear Algebraic Equations: Iteration methods
Eigenvalues and Eigenvectros: Jacobi Method for symmetric matrices, Power method for arbitrary matrices. Sections : 2.2, 2.3, 2.5, 2.7, 3.4, 3.5, 3.6

Unit II:

Interpolation and Approximation: Lagrange and Newton interpolation for unequal intervals, Finite difference operators, Interpolating polynomials using finite differences.
Sections: 4.2, 4.3, 4.4.

Unit III:

Differentiation and Integration: Numerical differentiation, Methods based on interpolation, Numerical integration, Methods based on undetermined coefficients.
Sections: 5.2, 5.6, 5.7, 5.8

Unit IV:

Solutions of Ordinary Differential Equations: Initial Value problems, single step methods, Taylor series method, Second, Third and Fourth order Runge-Kutta methods.
Sections: 6.1, 6.3, 6.4

Unit V:

Solutions of Partial Differential equations: Elliptic partial Differential equations, Parabolic partial differential equations, Hyperbolic partial differential equations.
Sections: 12.1, 12.2, 12.3

Course Outcomes

CO-1: Understand the basic concepts of root finding methods, system of equations and their solutions. CO-2: Understand the concepts of interpolation and construction of polynomials.

CO-3: Application of numerical methods to understand the concept of Calculus (Differentiation and Integration).

CO-4: Application of numerical concepts to solve ODEs and PDEs. CO-5: Usage of software tools to solve various problems numerically.

18MAT214 FOURIER SERIES AND INTEGRAL TRANSFORMS 3 1 0 4

Unit 1

Fourier series, Complex Form of Fourier Series, theorem. Gibbs Phenomenon (Example 2), Sine and Cosine Integrals.

Sections: 11.1, 11.2, 11.7

Unit 2

Infinite Complex Fourier Transforms, Sine and Cosine Transforms, Properties, Convolution theorem and Parseval"s**.** theorem
Sections: 11.8, 11.9

Unit 3

Modeling: Vibrating String, Solution by Separation of Variables, Solution of one Dimensional Wave Equation. Solution of one Dimensional Heat Equation.
Sections: 12.1, 12.2, 12.3, 12.4, 12.5

Unit 4

Laplace Transforms, Inverse Transforms, Properties, Transforms of Derivatives and Integrals, Second Shifting Theorem, Unit Step Function and Dirac-Delta Function, Differentiation and Integration of Transforms.
Sections: 6.1, 6.2, 6.3, 6.4

Unit 5

Convolution, Initial and Final Value Theorems, Periodic Functions, Solving Linear Ordinary Differential Equations with Constant Coefficients, System of Differential Equations and Integral Equations.
Sections: 6.5, 6.6, 6.7, 6.8

18MAT215 DYNAMICS 2 1 0 3

Unit 1

Kinematics –Velocity –Relative Velocity –Angular Velocity –Acceleration –Acceleration of falling bodies –Motion of a particle down a smooth inclined plane –the laws of motion –Newton‟s Laws of Mo

Unit 2

Projectile –Path of a projectile –Motion of a projectile - Horizontal range–Velocity of a projectile –Range of an inclined plane.

Unit 3

Fundamental laws of impact –Impact of a smooth sphere on a fixed smooth plane –Direct impact of smooth spheres –oblique impact of smooth elastic spheres.

Unit 4

Simple Harmonic Motion –Composition of Simple Harmonic Motion of the same period and in the same line –Composition of Simple Harmonic Motion of the same period and in two perpendicular directions – Moment of inertia –Theorem of parallel axes –Theorem of perpendicular axes –Moment of Inertia in some particular cases.

Unit 5

Radial and transverse components of velocity and acceleration –Differential equation of a central orbit – Given the orbit to find the law of force –Given the law of force to find the orbit.

Course Outcomes

CO1: Understand the basic concepts and laws of velocity and motion of a particle. CO2: Understand the definition and properties of projectile.

CO3: Understand the fundamental laws of impact and apply on the impact of smooth spheres.
CO4: Understand the simple harmonic motion and moment of inertia.

CO5: Understand the radial and transverse components of velocity and acceleration and implement the differential equation of a central orbit.

18MAT281 MATHEMATICAL SOFTWARE –MATLAB 0 0 2 1

Unit-I :

Preliminaries of MATLAB

Matrices, operations, and basic MATLAB functions; M-files, logical-relational operators and IF statements; Functions in MATLAB; FOR and WHILE loops in MATLAB; Graphics in MATLAB; Efficiency of algorithms in MATLAB; Useful functions and commands in MATLAB.

Unit-II

Linear Algebra

Roots of the function: Bisection method, fixed point iteration method, secant method, Regula-falsi method, Newton-Raphson method;
Interpolation: Lagrange‟s method, divided difference, fi
System of equations: Gauss elimination, Gauss Jordan elimination, Gauss Jacobi method, Gauss Seidel method, Newton‟s method for nonlinear systems of
Least squares and eigenvalue problems.

Unit-III

Ordinary Differential Equations

Euler's method, Modified-KuttafourthEuler‟sordermethod,syste**m**ethod,ofordinarydifferentialRunge equations.

Partial Differential Equations

Classification of Partial differential Equations, Elliptic, Parabolic, Hyperbolic PDEs.

Course Outcomes

CO-1: Understand the basics of MATLAB.
CO-2: Application of MATLAB software for basic matrix computation problems through loops.
CO-3:Application of MATLAB software to solve various Linear algebra problems numerically.
CO-4: Understand the concepts of ODE and PDE using MATLAB.

TEXT / REFERENCE BOOKS*:*

2. *Stephen J Chapman, MATLAB Programming for Engineers, Thomson Learning, 4rd Edition, 2007.*
3. *Sukanta Nayak and Snehashish Chakraverty, Interval Finite Element Method with MATLAB, Academic Press, 1st edition, 2018.*

18SSK211 LIFE SKILLS II 1 0 2 2

Professional Grooming and Practices: Basics of Corporate culture, Key pillars of Business Etiquette. Basics of Etiquette: Etiquette –Socially acceptable ways of behaviour, Personal hygiene, Professional attire, Cultural Adaptability. Introductions and Greetings: Rules of the handshake, Earning respect, Business manners. Telephone Etiquette: activities during the conversation, Conclude the call, To take a message. Body Language: Components, Undesirable body language, Desirable body language. Adapting to Corporate life: Dealing with people.

Group Discussions: Advantages of Group Discussions, Structured GD –Roles, Negative roles to be avoided, Personality traits to do well in a GD, Initiation techniques, How to perform in a group discussion, Summarization techniques.

Listening Comprehension advanced: Exercise on improving listening skills, Grammar basics: Topics like clauses, punctuation, capitalization, number agreement, pronouns, tenses etc.

Reading Comprehension advanced: A course on how to approach middle level reading comprehension passages.

Problem solving –Money Related problems; Mixtures; Symbol Based problems; Clocks and Calendars; Simple, Linear, Quadratic and Polynomial Equations; Special Equations; Inequalities; Functions and Graphs; Sequence and Series; Set Theory; Permutations and Combinations; Probability; Statistics.

Data Sufficiency: Concepts and Problem Solving.

Non-Verbal Reasoning and Simple Engineering Aptitude: Mirror Image; Water Image; Paper Folding; Paper Cutting; Grouping Of Figures; Figure Formation and Analysis; Completion of Incomplete Pattern; Figure Matrix; Miscellaneous.

Special Aptitude: Cloth, Leather, 2D and 3D Objects, Coin, Match Sticks, Stubs, Chalk, Chess Board, Land and geodesic problems etc., Related Problems

Course Outcomes:

CO1: Soft Skills: At the end of the course, the students will have the ability to communicate convincingly and negotiate diplomatically while working in a team to arrive at a win-win situation. They would further develop their inter-personal and leadership skills.

CO2: Soft Skills: At the end of the course, the students shall learn to examine the context of a Group Discussion topic and develop new perspectives and ideas through brainstorming and arrive at a consensus.

CO3: Aptitude: At the end of the course, students will be able to identify, recall and arrive at appropriate strategies to solve questions on geometry. They will be able to investigate, interpret and select suitable methods to solve questions on arithmetic, probability and combinatorics.

CO4: Verbal: At the end of the course, the students will have the ability to relate, choose, conclude and CO5: Verbal: At the end of the course, the students will have the ability to utilise prior knowledge of grammar to recognise structural instabilities and modify them.

CO6: VerbalAt the end of the course, the students will have the ability to comprehend, interpret, deduce and logically categorise words, phrases and sentences. They will also have the ability to theorise, discuss, elaborate, criticise and defend their ideas.

18MAT302 Basic Graph Theory and Combinatorics 2 1 0 3

Unit I

Graphs and Sub graphs, isomorphism, matrices associated with graphs, degrees, walks, connected graphs, shortest path algorithm. Text Book-1

Unit II

Trees: Trees, cut-edges and cut-vertices, spanning trees, minimum spanning trees, DFS, BFS algorithms. Connectivity: Graph connectivity, k-connected graphs and blocks. Text Book-1

Unit III

Colorings: Vertex colorings, greedy algorithm and its consequences. Edge-colorings, Vizing theorem on edge-colorings. Planar graphs: Euler formula. Text Book-1

Unit IV

Some Essential Problems, Binomial Coefficients, Multinomial Coefficients, Pigeonhole Principle, Principle of Inclusion and Exclusion.

Generating Functions, Double Decks, Counting with Repetition, Fibonacci Numbers, Recurrence Relations. Text Book-2

Unit V

Polya‟sTheory of Counting, Permutation Groups, Burns Formula, deBruijn‟sTextBook -2generalization.

Course Outcomes

CO-1: Understand the basic concepts of graphs.

CO-2: Understand the concepts of Trees and algorithms on trees. CO-3: Understand the concepts of planar graphs and vertex colorings.

CO-4: Understand and apply the concepts of principle of inclusion and exclusions.

CO-5: Understand and apply the conceptsionproblemsof. Polya‟

18MAT303 COMPLEX ANALYSIS 3 1 0 4

Unit 1

Review: Algebra of complex numbers, operations of absolute value and conjugate, standard inequalities for absolute value (Chapter 1)

Limits, Continuity, derivatives and analytic functions, Cauchy-Riemann equations, , Harmonic functions and harmonic conjugates, Power series, Exponential and Logarithmic functions(Chapters 2 and 3).

Unit 2

Contour Integrals - Some Examples -Examples with Branch Cuts -Upper Bounds for Moduli of Contour Integrals –Anti derivatives, Line integrals –Line integrals as functions of arcs, Cauchy-Goursat theorem-

Simply Connected Domains- Multiply Connected Domains,–Cauchy‟s theorem in a disk, An Extension of the Cauchy Integral Formula -Liouville‟sTheoremandthe Fundamental

Theorem of Algebra with proof -Maximum Modulus Principle with proof, Schwarz lemma.(Chapter 4, Sec: 39-51, 53, 54).

Unit 3

Isolated singularities: removable singularities, poles and essential singularities-Examples; Taylors series, Laurent series; Cauchy's residue theorem, Residues at Infinity, evaluation of definite integrals using Cauchy's residue theorem, Argument principle and Rouche's theorem. (Chapter 5, Sec: 57, 58, 60,61, Chapter 6, Sect:68, 69-72).

Unit 4

Evaluation of Improper Integrals -Improper Integrals from Fourier Analysis - Jordan‟s-IndentedLemma Paths - - Definite Integrals Involving Sines and Cosines - Argument Principle (Chapter 7, Sec: 78, 80-82, 85-
87).

Unit 5

Linear Transformations-The Transformation w = 1/z - Mappings by 1/z -Linear Fractional Transformations - An Implicit Form -Mappings of the Upper Half Plane, The transformation w=sinz, Mapping by z^2 and Branches of $z^{1/2}$(Chapter 8, Sec: 90-96, 97).

Course outcomes

CO1: Understand the concepts of the complex numbers analyticity, series expansions and some elementary complex functions

CO2:Understand about complex integrations

CO3:Understand about the singularities and Residues

CO4:Understand the evaluation of different type integrals

CO5:Understand the concept of complex mappings and Linear transformations some basic mappings.

18MAT308 Number Theory 3 1 0 4

Unit 1

Divisibility: Definition, properties, division algorithm, greatest integer function (Sec 1.1)

Primes: Definition, Euclid's Theorem, Prime Number Theorem (statement only), Goldbach and Twin Primes conjectures, Fermat primes, Mersenne primes. The greatest common divisor: Definition, properties, Euclid's algorithm, linear combinations and the GCD - The least common multiple: Definition and properties. The Fundamental Theorem of Arithmetic: Euclid's Lemma, canonical prime factorization, divisibility, gcd, and lcm in terms of prime factorizations. Primes in arithmetic progressions: Dirichlet's Theorem on primes in arithmetic progressions (statement only) (Sec 1.2 to 1.5)

Unit 2

Congruences

Definitions and basic properties, residue classes, complete residue systems, reduced residue systems - Linear congruences in one variable, Euclid's algorithm - Simultaneous linear congruences, Chinese Remainder Theorem - Wilson's Theorem - Fermat's Theorem, pseudoprimes and Carmichael numbers - Euler's Theorem (Sec 2.1 to 2.6).

Unit 3

Arithmetic functions

Arithmetic function, multiplicative functions: definitions and basic examples - The Moebius function, Moebius inversion formula - The Euler phi function, Carmichael conjecture - The number-of-divisors and sum-of-divisors functions - Perfect numbers, characterization of even perfect numbers (Sec 3.1 to 3.6).

Unit 4

Quadratic residues

Quadratic residues and nonresidues - The Legendre symbol: Definition and basic properties, Euler's Criterion, Gauss' Lemma - The law of quadratic reciprocity (Sec 4.1 to 4.3).

Unit 5

Primitive roots:

The order of an integer - Primitive roots: Definition and properties - The Primitive Root Theorem: Characterization of integers for which a primitive root exists (Sec 5.1 to 5.3).

Diophantine Equations

Linear Diophantine Equations - Pythagorean triples –Representation of an integer as a Sum of squares (Sec 6.1, 6.3, 6.5).

Course outcomes

Co.1: Understand integers with divisibility properties and realize the group structure in integers using modular operations.

Co.2: Apply division algorithm and factorization techniques in Cryptography.

Co.3: Study arithmetic functions and its applications in Number Theory

Co.4: Understand quadratic residue, primitive roots and solve Diophantine equations.

4. Burton, David M. Elementary Number Theory. *Allyn and Bacon, 1976.*

18MAT381 Statistics Lab 0 0 2 1

1. Various charts, like, BAR chart, Pi-chart..,
2. Find the central measures for given data.
3. Correlations and regressions
4. Test of Hypothesis
5. ANOVA
6. Control charts

Course outcomes

CO1 To gain knowledge about various statistical software and their implementations.

CO2 To apply statistical techniques using various software.

18MAT390 LIVE-IN-LAB. 3 cr

This initiative is to provide opportunities for students to get involved in coming up with solutions for societal problems. The students shall visit villages or rural sites during the vacations (after second semester or fourth semester) and if they identify a worthwhile project, they shall register for a 3-credit Live-in-Lab project, in the fifth semester. The objectives and projected outcome of the project should be reviewed and approved by the Dept. Chairperson and a faculty assigned as the project guide. On completion of the project, the student shall submit a detailed project report. The report shall be evaluated and the students shall appear for a viva-voce test on the project.

18SSK301 LIFE SKILLS III 1 0 2 2

Team Work: Value of Team work in organisations, Definition of a Team, Why Team, Elements of leadership, Disadvantages of a team, Stages of Team formation. Group Development Activities: Orientation, Internal Problem Solving, Growth and Productivity, Evaluation and Control. Effective Team Building: Basics of Team Building, Teamwork Parameters, Roles, Empowerment, Communication, Effective Team working, Team Effectiveness Criteria, Common characteristics of Effective Teams, Factors affecting Team Effectiveness, Personal characteristics of members, Team Structure, Team Process, Team Outcomes.

Facing an Interview: Foundation in core subject, Industry Orientation/ Knowledge about the company, Professional Personality, Communication Skills, activities before interview, upon entering interview room, during the interview and at the end. Mock interviews.

Advanced Grammar: Topics like parallel construction, dangling modifiers, active and passive voices, etc.

Syllogisms, Critical reasoning: A course on verbal reasoning. Listening Comprehension advanced: An exercise on improving listening skills.

Reading Comprehension advanced: A course on how to approach advanced level of reading, comprehension passages. Exercises on competitive exam questions.

Specific Training: Solving campus recruitment papers, National level and state level competitive examination papers; Speed mathematics; Tackling aptitude problems asked in interview; Techniques to remember (In Mathematics). Lateral Thinking problems. Quick checking of answers techniques; Techniques on elimination of options, Estimating and predicting correct answer; Time management in aptitude tests; Test taking strategies.

Course Outcomes:

CO1: Soft Skills: At the end of the course, the students will have the ability to prepare a suitable resume (including video resume). They would also have acquired the necessary skills, abilities and knowledge to present themselves confidently. They would be sure-footed in introducing themselves and facing interviews.

CO2: -Soft Skills: At the end of the course, the students will have the ability to analyse every question asked by the interviewer, compose correct responses and respond in the right manner to justify and

convince the interviewer h displayingofone‟setiquette, positiverightattitude candi and courteous communication.

CO3: Aptitude: At the end of the course, students will be able to interpret, critically analyze and solve logical reasoning questions. They will have acquired the skills to manage time while applying methods to solve questions on arithmetic, algebra, logical reasoning, and statistics and data analysis and arrive at appropriate conclusions.

CO4: Verbal: At the end of the course, the students will have the ability to understand and use words, idioms and phrases, interpret the meaning of standard expressions and compose sentences using the same.

CO5: Verbal: At the end of the course, the students will have the ability to decide, conclude, identify and choose the right grammatical construction.

CO6: Verbal: At the end of the course, the students will have the ability to examine, interpret and investigate arguments, use inductive and deductive reasoning to support, defend, prove or disprove them. They will also have the ability to create, generate and relate facts / ideas / opinions and share / express the same convincingly to the audience / recipient using their communication skills in English.

18MAT311 Optimization Theory 3-1-0-4

Unit-I

Introduction, Conditions for local minimization. One dimensional Search methods: Golden search method, Fibonacci method, Newton's Method, Secant Method, Remarks on Line Search Sections 7.1 -7.5

Unit II

Gradient-based methods- introduction, the method of steepest descent, analysis of Gradient Methods, Convergence, Convergence Rate. Analysis of Newton's Method, Levenberg-Marquardt Modification, Newton's Method for Nonlinear Least-Squares.
Sections 8.1 - 8.3 and 9.1 –9.4

Unit-III

Conjugate direction method, Introduction The Conjugate Direction Algorithm, The Conjugate Gradient Algorithm for Non-Quadratic Quasi Newton method –Approximating the inverse Hessian.
Sections 10.1 - 10.4 and 11.1, 11.2

Unit IV

Nonlinear Equality Constrained Optimization- Introduction, Problems with equality constraints Problem Formulation, Tangent and Normal Spaces, Lagrange Condition, Second-Order Conditions, Minimizing Quadratics Subject to Linear Constraints
Sections 19.1 -19.6

Unit V

Nonlinear Inequality Constrained Optimization -Introduction - Problems with inequality constraints: Kuhn-Tucker conditions, introduction to projections, Projected Gradient methods, Penalty methods.
Sections 20.1, 20.2, 22.1 –22.4

Course Outcomes

CO1. Understand different types of Optimization Techniques in engineering problems. Learn Optimization methods such as Bracketing methods, Region elimination methods,Point estimation methods.

CO2. Learn gradient based Optimizations Techniques in single variables as well as multi-variables (non-linear).

CO3. Understand the Optimality criteria for functions in several variables and learn to apply OT methods like unidirectional search and Direct search methods.

CO4.Learn constrained optimization techniques. Learn to verify Kuhn-Tucker conditions and Lagrangian Method

18MAT312 Topology 3 1 0 4

Unit 1

Infinite sets, Countable and Uncountable sets, the Axiom of Choice - continuum hypothesis, Well-ordered sets, The maximum principle.
Chapter 1: Sec 7 to 11(Text Book 2)

Unit 2

Metric spaces –Definition and examples - open balls and closed ball –Open Sets, Closed Sets and Convergence Sequences –Continuous Mappings between Metric Spaces – Examples –Complete Metric Spaces.
Chapter 9: Sec 9.1 to 9.4 (Text Book 1)

Unit 3

Compact spaces and their properties –Continuous functions on Compact spaces- Characterization of Compact Metric spaces -Separable Metric Spaces.
Chapter 9: Sec 9.5 and 9.6 (Text Book 1)

Unit 4

Three Fundamental Theorems: The Arzela-Ascoli Theorem –The Baire Category Theorem –The Banach Contraction Principle.
Chapter 10: Sec 10.1 to 10.3 (Text Book 1)

Unit 5

Topological spaces - Basis for a topology - The order topology - The product topology on X×Y - The subspace topology-Closed sets and limit points.
Chapter 2: Sec 12 to 17(Text Book 2)

Course Outcomes

CO-1: To understand the basic definitions of infinite sets, countable set, uncountable sets and axiom of choice through examples.

CO-2: To understand the definitions of metric space, convergence, continuity and completeness through examples this leads to the study of more abstract topological spaces.

CO-3: To study the basic properties of compact metric spaces. To understand the concepts of compact metric space and separable metric space through examples.

CO-4: Understand and apply the concepts of completeness and compactness to prove the existence and uniqueness of solutions to certain ordinary differential equations.

CO-5: To understand the basic definitions of topological spaces, limits, closed set, open set and basis for a topology through examples. To construct new topology from given topology such as subspace topology, product topology etc.

TEXT BOOKS:

1. H.L. Royden and P.M. Fitzpatrick - "Real Analysis"-PearsonEducation Asia Limited -2010 - Fourth Edition.
2. J.R. Munkers- "Topology"-PrenticeHall of India -2002- Second Edition.

4.G.F.Simmons-"Introdution to Topology and Modern Analys Education-2004

18MAT313 Special Functions 3-1-0-4

Unit 1

Gamma and Beta Functions and Elliptic Functions.
Part II: 4.1 –4.11

Unit 2

Special functions, power series solution of differential equations, ordinary point; Solution about singular points, Frobenius method. Bessel‟s equation,(x). solu
Part II: 8.5-8.6, 8.8- 8.10, 11.1, 11.2.

Unit 3

Recurrence Formulae, Equations reducible to Bessel‟s equation, or generating function for $J_n(x)$.

Part II: 11.8, 11.10, 11.11.

Unit 4

Legendre‟s equation,(x),Legendre‟spolynomialfunctionP of th solution of Legendre‟s equation, Rodrigue‟s formula,

Legendre‟s polynomial.
Part II: 9.1-9.4.

Unit 5

Orthogonality of Legendre polynomials, Recurrence formulae for $P_n(x)$ Green's function –Green‟s Iden –Generalized
functions. Part
II: 9.8-9.9,
9.22-9.25.

Course Outcomes

CO-1: Understand and apply the concept of gamma and beta and elliptic functions in engineering and sciences.

CO-2: Model various engineering non linear systems as differential equations and solve using the knowledge of series solutions.

CO-3: Understand the concept of recurrence relation and apply to solve engineering problems using the knowledge of Bessel‟s equation.

CO-4: Understand the concept of recurrence relation and apply to solve engineering problems using the knowledge of Legendre Polynomial.

CO-5: Understand and apply the concepts of Legen equations.

18MAT213 Formal Languages and Automata Theory 3 1 0 4

Unit 1

Fundamentals: Strings, Alphabet, Language, Operations, Finite state machine, definitions, finite automaton model, acceptance of strings, and languages, deterministic finite automaton and non deterministic finite automaton, transition diagrams and Language recognizers.
Finite Automata: NFA with Î transitions - Significance, acceptance of languages.

Conversions and Equivalence: Equivalence between NFA with and without Î transitions, NFA to DFA conversion, minimisation of FSM, equivalence-Moore bet and Melay machines.

Unit 2

Regular Languages: Regular sets, regular expressions, identity rules, Constructing finite Automata for a given regular expressions, Conversion of Finite Automata to Regular expressions. Pumping lemma of regular sets, closure properties of regular sets (proofs not required).

Unit 3

Grammar Formalism: Regular grammars - right linear and left linear grammars, equivalence between regular linear grammar and FA, inter conversion, Context free grammar, derivation trees, sentential forms. Right most and leftmost derivation of strings.

Unit 4

Context Free Grammars: Ambiguity in context free grammars. Minimisation of Context Free Grammars. Chomsky normal form, Greiback normal form, Pumping Lemma for Context Free Languages. Enumeration of properties of CFL (proofs omitted).

Push Down Automata: Push down automata, definition, model, acceptance of CFL, Acceptance by final state and acceptance by empty state and its equivalence. Equivalence of CFL and PDA, interconversion. (Proofs not required). Introduction to DCFL and DPDA.

Unit 5

Turing Machine: Turing Machine, definition, model, design of TM, Computable functions, recursively enumerable languages. Church‟s hypothesis, count required).

Course Outcomes

CO-1: Understand the basic concepts of languages and finite state machine.

CO-2: Understand the concepts of regular language and regular expressions.

CO-3: Familiarse the concepts of various types of grammars.

CO-4: Understand the concepts of context free grammar and language

TEXT BOOKS:

1. *Hopcroft, Motwani and Ullman, Introduction to Automata Theory Languages and Computation. Third Edition, 2007, Pearson Education, Addison-Wesley.*

4 Mishra and Chandrashekaran, Theory of Computer Science –Automata Languages and Computation 2nd Edition, PHI.

18MAT314 Calculus of Variations 3 1 0 4

Unit 1

ELEMENTS OF THE THEORY: Functionals. Some Simple Variational Problems, Function Spaces, The Variation of a Functional- A Necessary Condition for an Extremum, The Simplest Variational Problem. Euler's Equation, The Case of Several Variables, A Simple Variable End Point Problem, The Variational Derivative, Invariance of Euler's Equation.

FURTHER GENERALIZATIONS: The Fixed End Point Problem for n Unknown Functions, Variational Problems in Parametric Form, Functionals Depending on Higher-Order Derivatives, Variational Problems with Subsidiary Conditions.

THE GENERAL VARIATION OF A FUNCTIONAL Derivation of the Basic Formula, End Points Lying on Two Given Curves or Surfaces, Broken Extremals, The Weierstrass-Erdmann Conditions.

Unit 2

THE CANONICAL FORM OF THE EULER EQUATIONS AND RELATED TOPICS: The Canonical Form of the Euler Equations, First Integrals of the Euler Equations, The Legendre Transformation,

Canonical Transformations, Noether's Theorem, The Principle of Least Action, Conservation Laws, The Hamilton-Jacobi Equation. Jacobi's Theorem.

Unit 3

THE SECOND VARIATION. SUFFICIENT CONDITIONS FOR A WEAK EXTREMUM: Quadratic Functionals. The Second Variation of a Functional, The Formula for the Second Variation. Legendre's

Condition, Analysis of the Quadratic Functionals $\int_a^b (Ph'^2 + Qh^2)\, dx$, Jacobi's Necessary Condition. More on Conjugate Points, Sufficient Conditions for a Weak Extremum, Generalization to n unknown functions, Connection Between Jacobi's Condition and the Theory of Quadratic Forms. Sufficient conditions for a strong extremum: Consistent Boundary Conditions. General Definition of a Field, The Field of a Functional, Hilbert's Invariant Integral, The Weierstrass E-Function. Sufficient Conditions for a Strong Extremum.

Unit 4

DIRECT METHODS IN THE CALCULUS OF VARIATIONS: Minimizing Sequences, The Ritz Method and the Method of Finite Differences. The Sturm-Liouville Problem.
Integral Equations

Unit 5

Introduction and basic examples, Classification, Conversion of Volterra Equation to ODE, Conversion of IVP and BVP to Integral Equation, Theion,Green‟sSuccessive fu approximation, Successive substitution methods for Fredholm Integral Equations, series solution, successive approximation, successive substitution method for Volterra Integral Equations, Volterra Integral Equation of first kind, Integral Equations with separable Kernel, Fredholm's first, second and third theorem, Integral Equations with symmetric kernel, Eigen function expansion, Hilbert-Schmidt theorem, Fredholm and Volterra Integro - Differential equation, Singular and nonlinear Integral Equation.

Course outcomes

CO1: To understand variational problems and the necessary condition for extremal namely Euler equation. To apply these conditions in evaluations of extremal of functionals for several variables.

CO2: To apply the variational problems in solving physical problems which involves the Principle of Least Action, Conservation Laws, The Hamilton-Jacobi Equation.

CO3: To understand the concept of weak and strong extremum. To apply in the Field of a Functional, Hilbert's Invariant Integral, The Weierstrass E-Function.

CO4: To apply these techniques in solving differential equations by the Ritz Method and the Method of Finite Differences. To solve the Sturm-Liouville Problem using variational method.

CO5: To understand the idea of solving various integral equations and to apply these tools to solve Fredholm and Volterra Integro - Differential equation by the methods of computation, Successive approximation, series solution, successive approximation.

TEXT BOOKS

1. I.M.Gelfand and S. V. Francis. Calculus of Variation, Prentice Hall, 1991. ***(All the chapters except chapter 7 are included)***
2. F. G. Tricomi, Integral equations, Dover, 1985.

18MAT399 PROJECT 6 cr

Students interested in exercising the exit-option at the end of the sixth semester shall decide on it at the end of the fourth semester. Such students should do a six credit project. The proposed project work shall get started at the beginning of the fifth semester and is to be credited during the sixth semester. The project work should be done under the supervision of faculty members. Projects can be learning a chapter in a text book and writing it in detail or it can be survey of

some topics or developing mathematical models for engineering and science problems. At the end of the fifth semester there shall be a review of the ongoing project. Also the student should give a presentation of the project at the end of the sixth semester.

CO-1: To derive the class equation and use it in various counting problems. To derive Cauchy's/ Sylow's theorem for general groups.

CO-2: To understand direct product concept and the application of Sylow's theorem to Classify finite abelian Groups.

CO-3: To study the cyclotomic polynomials and cyclotomic extension fields and their properties

CO-4: To familiarize Galois theory and its use in analysing the solvability by radicals of polynomial equations.

CO-5: To understand group representation theory and the concepts of indecomposable modules, irreducible modules and completely irreducible modules

Review: Groups and Rings

Unit 1
Groups

Conjugate Elements, Normalizer of an Element, Index of Normalizer, Center of a Group, Cauchy's Theorem on Prime Order, the Number of Conjugate Classes $p(n)$ for a Permutation Group, p-Sylow subgroups, Sylow's Theorems. **(Sec. 2.11and 2.12)** **(11 hrs)**

Unit 2
Groups (contd)

Normal Subgroups, Isomorphic Groups, External and Internal Direct Products, Cyclic Groups, Abelian Groups, Invariants of a Group, Fundamental Theorem on Finite Abelian Groups **(Sec. 2.13 and 2.14)** **(11 hrs)**

Unit 3

Cyclotomic Polynomial and Extensions of Fields. (Ref. Book-1, Sec. 13.6) (8 hrs)

Unit 4
Galois Theory

The Elements of Galois Theory, Group of Automorphisms and its fixed field, Galois Group, The Fundamental Theorem of Galois Theory, Solvable Groups, Solvability by Radicals **(Sec. 5.6 to 5.8).** (13 hrs)

Unit 5

Introduction to the Representation Theory. Linear Actions and Modules over group rings. (Reg. Book-1, Sec. 18.1) (10 hrs)

CO5	3	3	3	3	3	3	-	-	-	-	-	2

22MAT502 Advanced Real Analysis 3-1-0-4

Course Outcomes:

CO1- Understanding the sequences and series of functions and uniform convergence.
CO2- Understanding some special functions like exponential, logarithmic and trigonometric functions.
CO3- Understanding special functions and algebraic completeness of the complex field and Fourier series.
CO4- Applying the concept of derivatives in functions of several variables.
CO5- Understanding Contraction principle, The inverse function theorem, The implicit function theorem.

Unit 1

Sequences and Series of Functions: Sequence of functions and its point-wise limit, Discussion of main problems, Uniform convergence, Uniform convergence and continuity, Uniform convergence and Integration, Uniform convergence and Differentiation, Equicontinuous Families of Functions, The Stone-Weierstrass Theorem.

(Chapter 7)

Unit 2

Some Special Functions: Introduction to power series, The Exponential and Logarithmic Functions, The Trigonometric Functions.

(Chapter 8)

Unit 3

Some Special Functions :The Algebraic Completeness of the Complex Field, Fourier series, Gamma function and its properties.

(Chapter 8)

Unit 4

Functions of Several Variables: Linear Transformation, Differentiation, Partial derivatives and problems.

(Chapter 9)

Unit 5

The Contraction principle, The inverse function theorem, The implicit function theorem and problems.

(Chapter 9)

22MAT503 ORDINARY DIFFERENTIAL EQUATIONS 3 0 2 4

Prerequisite: The students must know the basic concepts on ordinary differential equation.

Course Outcomes:

CO-1: Understand the existence - uniqueness conditions of solutions to first order equations and apply various methods to solve the initial value problems.
CO-2: Understand the concepts of the existence and uniqueness theorem, fundamental matrix, homogenous/nonhomogenous linear systems with constant coefficients and solve the problems involving central forces, planetary motion and some special equations.
CO-3: Understand the concepts of a complex n-dimensional space, the systems as vector equations, existence and uniqueness of solutions to systems.
CO-4: Understand the concepts of nonlinear equations, autonomous systems, the phase plane and its phenomena and stability for linear and nonlinear systems.
CO-5: Understand the concepts of periodic and oscillatory behaviours of a differential equation.

Unit 1

Linear differential equations: Introduction, initial value problems, the wronskian and linear independence, reduction of order of a homogeneous equation, non-homogeneous equation.

TB2 (3.1-3.6)(4 hours)

Existence - Uniqueness of Solutions to First Order Equations: Equations with variable separated, Exact equations, the method of successive approximations, Lipschitz condition, Convergence of successive approximations, Non–local existence of solutions, Approximations to, and uniqueness, of solutions.

TB2 (5.2- 5.8)(10hours)

Unit 2

Systems of first order equations, Existence and uniqueness theorem, fundamental matrix, nonhomogenous linear systems, linear systems with constant coefficients. **TB3 (4.2-4.7)(10 hours)**

An example – central forces and planetary motion, Some special equations.
TB2 (6.2- 6.3)(4 hours)

Unit 3

Complex n-dimensional space, Systems as vector equations, Existence and uniqueness of solutions to systems, Existence and Uniqueness of linear systems, Equations of order n.
TB2 (6.4- 6.8) (10 hours)

Unit 4

Nonlinear equations: Autonomous Systems, The Phase plane and its phenomena, Types of critical points. Stability, critical points and stability for linear systems, Stability by Liapunov's Direct method, stability by eigen values, Simple critical points of nonlinear systems.**TB1 (11.58- 11.62) (10 hours)**

Unit 5

Nonlinear mechanics, Conservative systems, Periodic solutions, The Poincaré–Bendixson theorem. Oscillations and the Sturm Separation theorem, The Sturm comparison theorem.
TB1 (11.63- 11.64), (4.24-4.25) (7 hours)

TEXT BOOKS:

1. George F. Simmons and John S Robertson, Differential equations with applications and historical notes, Tata McGraw Hill Education Private Limited, Second Edition, 2003.

CO5	3	3	3	2	3	3	-	-	-	-	1	2

22MAT504 FUNCTIONAL ANALYSIS-I 3 1 0 4

Course Outcomes:

CO1: To understand the basic concepts of normed linear and banach spaces.
CO2: To understand finite dimensional normed spaces and compactness of unit ball.
CO3: To understand uniform boundedness principle, bounded inverse theorem and open mapping theorem.

CO4: To understand bounded linear functionals, dual space of classical spaces, reflexivity of the banach space and Hilbert spaces.
CO5: To understand separable Hilbert space and Riesz Representation Theorem.

Unit 1

Normed linear spaces, Banach spaces, Classical examples: $C[0,1], l_p, C, C_0, C_{00}, L^p[0,1]$, Continuity of Linear Operator and bounded linear operator, Quotient spaces

Unit 2

Finite dimensional normed spaces, Riesz lemma, (non) compactness of unit ball, Hahn Banach theorem and Its consequences.

Unit 3

Uniform Boundedness principle, Closed Graph Theorem, Bounded Inverse Theorem, Open Mapping Theorem, Banach Steinhauss Theorem

Unit 4

Bounded Linear Functionals, Dual space of classical spaces, Reflexivity of the Banach Space, Hilbert spaces, Projection theorem, Orthonormal basis, Bessel inequality, Parseval's equality

Unit 5

Seperable Hilbert spaces and Countable orthonormal basis, example of non seperable spaces, Uncountable orthonormal basis and definition of convergence of Fourier series – Riesz-Fisher's theorem, Riesz representation theorem

22MAT505 Data Structures and Algorithms 3 0 2 4

Course Outcomes:

CO-1: Understand the basic concepts of growth functions and various sortings.
CO-2: Understand and the concept of divide and conquer for various sortings.
CO-3: Understand and apply the greedy method for various problems.
CO-4: Understand various definitions of graphs and apply to some algorithms.
CO-5: Understand the concepts of various computational complexity classes.

Unit 1 Introduction: growth functions – recurrence relation – methods – master method. Sorting: bubble – insertion sort – selection sort.

Unit 2 Divide and conquer: quick sort – merge sort – bucket sort – lower bounds – heap sort – comparisons of sorting.

Unit 3 Greedy algorithm: fractional knapsack problem – task scheduling problem. Dynamic programming: matrix multiplication problem – 0-1 knapsack.

Unit 4 Graph algorithms: graph traversal (DFS, BFS with analysis) – biconnected components – strong connectivity; shortest path algorithms (along with analysis) – Dijkstra – Bellman Ford – Floyd Warshall. All pairs shortest path algorithm – minimum spanning tree (with analysis) – Kruskal – Prim's – Baruvka's.

Unit 5
NP problems: definition, P, NP, NP complete, NP hard & co-NP, examples – P, NP.

22MAT581 Mathematics Lab 0 0 2 1

Course Outcomes:

CO 1 Introduction to a Mathematical software
CO2 Explorations of various applications
CO3 Implementation of Mathematical techniques.

- Introduction to a Mathematical software
- Explorations of various applications
- Implementation of Mathematical techniques.
- Introduction to Latex

CO-PO Mapping:

SEMESTER VIII

22MAT511 ADVANCED COMPLEX ANALYSIS 3 1 0 4

Course Outcomes:

CO1: Understand the concept of the Schwarz Reflection by complex conjugation, and its Applications
CO2:Understand the Riemann Mapping theorem

CO3:Understand the Analytic Continuation
CO4:To understand about the entire function and meromorphic function
CO5:Understand about the Elliptic functions

Unit 1:
Schwarz Reflection: Schwarz Reflection by complex conjugation, Reflection along analytic Arcs, Application of Schwarz Reflection (Chapter 9)

Unit 2
The Riemann Mapping Theorem: Compact sets in Function Spaces, Statement and Proof of the the Riemann Mapping Theorem, Behaviour at the Boundary (Chapter 10).

Unit 3
Analytic Continuation: Analytic Continuation along a curve, Monodromy Theorem, the Dilogrithm, Bloch-Wigner Function, Picard's Theorem and its Application (Chapter 11)

Unit 4
Entire and Meromorphic Functions: Infinite Products, Absolute Convergence, Weierstrass Products, Functions of Finite Order, Canonical product, Minimum Modulus Theorem, Hadamard's Theorem, Mittag-Leffler Theorem (Chapter 13) .

Unit 5
Elliptic Functions: Liouville Theorem, Fundamental Parallelogram, Elliptic Function, Weierstrass Function, Addition Theorem, Sigma and Zeta Functions (Chapter 14)

22MAT512 **Advanced Topology** **3 1 0 4**

Course Outcomes:

CO-1: To understand the basic definitions of metric topology, countability and separation axioms.
CO-2: To understand the normal spaces, Urysohn lemma and Urysohn metrization Theorem.
CO-3:.To understand the cTychnoff theorem and other metrization theorems.
CO-4: To study the complete metric spaces and compactness.
CO-5: Understand and the basic concepts of homotopy of paths and fundamental groups.

Unit – 1: The Metric Topology, The Countability Axioms, The Separation Axioms. (Text Book : 20, 21, 30 & 31)

Unit – 2: Normal Spaces. The Urysohn Lemma, The Urysohn Metrization Theorem, The Tietze Extension Theorem. (Text Book : 32 - 35)

Unit – 3: The Tychonoff Theorem, Local Finiteness, The Nagata-Smirnov Metrization Theorem, Para-compactness, The Smirnov Metrization Theorem. (Text Book : 37 & 39 - 42)

Unit – 4: Complete Metric Spaces, Compactness in Metric Spaces, Pointwise and Compact Convergence, Ascoli's Theorem, Baire Space. (Text Book : 43, 45 - 48)

Unit – 5: Homotopy of Paths, The Fundamental Group, Covering Spaces. (Text Book : 51 - 53)

CO4	3	3	3	3	3	-	-	-	-	-	2	3
CO5	3	3	3	3	3	-	-	-	-	-	2	3

22MAT513 PARTIAL DIFFERENTIAL EQUATIONS 3 0 2 4

Prerequisite: The students must know the basic concepts on Calculus (both differential and integral), Differential Equations (ODE and PDE at UG Level), either metric space or topology to understand the words open set, closed set, compact, connected, region, continuous function, Vector Calculus in which the notion of curves, surfaces, tangent plane, normal, surface integral and volume integral and their evaluation, Fourier series and Fourier transforms.

Course Outcomes:

CO-1: Understand the geometrical interpretation, characteristics and general solutions of a first-order pde, and solve it by various methods.
CO-2: Understand the concepts of a second-order pde, its canonical forms and the procedure for obtaining the general solutions.
CO-3: Understand the concepts of the Cauchy problem, initial & boundary-value problems and homogeneous/ nonhomogeneous wave equations..
CO-4: Understand the various types of boundary-value problems, maximum/minimum principles and uniqueness and continuity theorems.
CO-5: Understand the concepts of the heat equation, its solutions and the initial and boundary value problems with time- dependent and time-independent boundary conditions.

Unit 1

Geometrical interpretation of a first-order pde, method of characteristics and general solutions, Monge cone, Lagrange's equations, canonical forms of first-order linear equations, method of separation of variables.

Tb1:(2.4-2.8)

Unit 2

Second-order equations in two independent variables, canonical forms, equations with constant coefficients, general solutions.

Tb1: (4.1-4.6)

Unit 3

The Cauchy problem, the Cauchy-Kowalewskaya theorem, homogeneous wave equations, the D'Alembert solution of wave equation, initial boundary-value problems, equations with nonhomogeneous boundary conditions, vibration of finite string with fixed ends,.(review) nonhomogeneous wave equations.

Tb1:(5.1-5.7)

Unit 4

Basic concepts, types of boundary-value problems, maximum and minimum principles, uniqueness and continuity theorems. Dirichlet problem for a circle, Dirichlet problem for a circular annulus, Neumann problem for a circle, Dirichlet problem for a rectangle, Dirichlet problem involving the Poisson equation, the Neumann problem for a rectangle

Tb1:(9.1-9.10)

Unit 5

Derivation of the heat equation and solutions of the standard initial and boundary value problems, uniqueness and the maximum principle, time-independent boundary conditions, time-dependent boundary conditions.**TB2: (3.1-3.4) (10 hours)**

TEXTBOOKS:

22MAT514 MEASURE THEORY 4 0 0 4

Course Outcomes:

CO -01: To understand the notion of measure of a set on the real line and to understand the measurable sets and functions
CO-02: To understand and appreciate the notion of Lebesgue Integrals as a generalization of Riemann Integrals
CO-03: To understand abstract measure spaces and integration with respect to a measure
CO-04: To understand and apply various inequalities to establish the completeness of
CO-05: To understand and apply Raydon-Nikodym Theorem

Unit 1 (Sections: 2.1 to 2.5 of [1])
Measure on the Real Line: Lebesgue Outer Measure - Measurable Sets – Regularity - Measurable Functions - Borel and Lebesgue Measurability

Unit 2 (Sections: 3.1 to 3.4 of [1])
Integration of Functions of a Real Variable: Integration of Non-Negative Functions - The General Integral - Integration of Series - Riemann and Lebesgue Integrals.

Unit 3 (Sections: 5.1 to 5.6 of [1])
Abstract Measure Spaces: Measures and Outer Measures - Extension of a Measure -Uniqueness of the Extension - Completion of a Measure - Measure Spaces - Integration with Respect to a Measure.

Unit 4 (Sections: 6.1 to 6.5 of [1])
Inequalities and the L^p Spaces: The L^p Spaces - Convex Functions - Jensen's Inequality - The Inequalities of Holder and Minkowski - Completenessof$L^p(\mu)$.

Unit 5 (Sections: 8.1 to 8.4 of [1])
Signed Measures and their Derivatives: Signed Measures and the Decomposition - The Jordan Decomposition - The Radon-Nikodym Theorem - Some Applications of the Radon-Nikodym Theorem.

CO5	3	3	3	2	3	3	-	-	-	-	1	2

SEMESTER IX

22MAT601 Advanced Graph Theory 3 0 2 4

Course Outcomes:

CO-1: Understand the basic concepts of graphs and trees.
CO-2: Understand the concepts of matchings and coverings.
CO-3: Understand the graph coloring problems.
CO-4: Understand the concepts of planar graphs and dual graphs.
CO-5: Understand the basics of spectral graph theory.

Review of Graphs: Graphs and Sub graphs, isomorphism, matrices associated with graphs, degrees, walks, connected graphs, shortest path algorithm.

Unit 1

Trees: Trees, cut-edges and cut-vertices, spanning trees, minimum spanning trees.

Connectivity: Graph connectivity, k-connected graphs and blocks.

Euler and Hamilton Graphs: Euler graphs, Euler's theorem. Fleury's algorithm for Eulerian trails. Necessary / sufficient conditions for the existence of Hamilton cycles, Chinese-postman problem, approximate solutions of traveling salesman problem.

Unit 2

Matching: Matchings, maximal matchings. Coverings and minimal coverings. Berge's theorem, Hall's theorem, Tutte's perfect matching theorem, Job assignment problem.

Coverings, Independent Sets and Cliques; Basic Relations. Graph dominations and coverings.

Unit 3

Colorings: Vertex colorings, greedy algorithm and its consequences, Brooks' theorem. Chromatic polynomials. Edge-colorings, Vizing theorem on edge-colorings.

Unit 4

Planar graphs: Euler formula. Crossing number Kuratowaski's Characterization, Planarity testing algorithm. Spear Embedding. Dual graphs

Unit 5 Graph Spectrum:

Adjacency matrix of a graph and its eigenvalues, Spectral radius of graphs, Regular graphs and Line graphs, Strongly regular graphs, Cycles and Cuts, Laplacian matrix of a graph, Algebraic connectivity, Laplacian spectral radius of graphs.

CO5	3	3	3	3	3	1	-	-	-	-	2	2

22MAT602 FUNCTIONAL ANALYSIS-II 3 1 0 4

Course Outcomes:

CO1: To understand the concepts of weak and weak*topologies..
CO2: To understand linear and other operators..

CO3: To understand compact operators on banach spaces. .
CO4: To understand invertibility and spectrum, properties of spectrum, Gelfand theorem.
CO5: To understand basis of commutative banach algebra.

Unit-I

Weak topology, weak* topology, weak convergence, weak* convergence, Banach Alaglou Theorem

Unit-2

Linear operators-Examples-Integral operators- Inverse and adjoint operators- Range and null spaces-Adjoint operators in Hilbert spaces- Normal and unitary Operators

Unit-3

Compact operators on Banach spaces- Definition, examples and basic properties- Hilbert Schmidt operators

Unit-4

Banach Algebras, examples, ideals and quotients, invertibility and Spectrum, Properties of Spectrum, Gelfand theorem.

Unit-5

Spectral Radius Formula, Commutative Banach algebra, Gelfand Representation Theorem

22MAT603 Mathematical Foundations of Incompressible Fluid Flow 3 1 0 4

Course Outcomes:

CO1: To understand and the significance of Lagrangean and Eulerian frames of reference, the material derivative, equation of continuity in these two frames and their equivalence and analyze the kinematics of fluid flow

CO2: To understand and analyze the inviscid fluid flow theory by using Euler's Equation,the simplified form of energy equation, Lamb's, Lagrange's and Helmholtz's equations and appreciate the permanence of irrotational motion.

CO3: To understand the significance of Bernoulli's equation and its applications, the stream function, velocity potential and complex potential in two-dimensional flow, the image system of source and doublet and associated conformal transformations.

CO4) To understand the general theory of irrotational motion and associated theorems like Kelvin's theorem on permanence of irrotational motion, Minimum Kinetic Energy Theorem and the basic theorems on acyclic irrotational motion.

CO5) To understand the basic ideas of symmetry of stress and rate of strain tensor, invariant functions of components of these tensors in viscous fluid flow to develop the Navier-Stokes Equation of motion and to model and solve simple flow problems having exact solution.

Unit 1:

Review of gradient, divergence, curl, Laplacian and vector identities in curvilinear orthogonal systems. (Appropriate sections from Chapter – 1)

Kinematics of Fluids in motion – Lagrangian and Eulerian methods – Material Derivative - Equation of continuity in Lagrangian and Eulerian Methods – their equivalnence – Boundary conditions – Kinematic and physical – condition for a moving surface to be a boundary of fluid flow - steam line, path line and streak line – vorticity – angular velocity - rotational and irrotational motion – vortex lines. (Appropriate sections from Chapter – 2)

Unit 2

Euler's Equations of Equation of Motion of inviscid fluid flow – Lamb's hydrodynamical equations –Impulsive Motion – The energy equation – (inviscid flow) - Lagrange's hydrodynamical equations – Cauchy's Integrals – Helmohtz equations – Permancence of irrotational motion. (Chapter 3)

Unit 3

Bernoulli's equation – Bernoulli's Theorem – Applications – Toricelli's Theorem – Trajectory of a free jet – Euler's Momentum Theorem – D'Alembert's paradox - Motion in two-dimensions –

Stream function – Physical significance - irrotational motion in two-dimensions – complex potential – source, sink and doublet – Image of a system – Image of a source, sink and doublet with respect to a line – Conformal transformation & preservation of Kinetic Energy – Transformation of source, sink & doublet – conformal transformation of uniform line source and vortex – Image of a source and a doublet with regard to circle - Milne-Thomson circle theorem – Blasius theorem. (appropriate sections from Chapter 4 & 5)

Unit 4

General theory of irrotational motion – flow and circulation – Stoke's theorem – Kelvin's Circulation theorem – Permanence of irrotational motion – Green's Theorem – Kinetic Energy of Infinite liquid – Acylic and cyclic motion – Some uniqueness theorems related to acyclic irrotational motion - Kelvin's minimum energy theorem – Mean of a potential function over a spherical surface-Maxima and minima of velocity and pressure - Mean value of velocity potential in a region with internal boundaries. (Appropriate sections from Chapter 6)

Unit 5

Newtonian & Non-Newtonian fluids – state of stress at a point – symmetry of stress at a point – transformation of stress components – the three invariant functions – principal stresses – principal directions – Nature of strain – transformation of rate of strain components – the three invariant functions –Relation between stress and rates of strain – Stoke's law of viscosity – Stoke's Hypothesis – The Navier-Stoke's equations of motion of a viscous fluid – vorticity transport equation.

Exact Solutions of Navier Stokes Equations – Steady flows: Plane Couete flow – Generalized Plane Couette Flow – Plane Poiseuille Flow – Hagen-Poiseuille Flow – Unsteady flows: flow over a suddenly accelerated flat plate – flow over an oscillating plate – flow between two parallel plates – flow in a pipe, starting from rest. (Appropriate sections in Chapter 13 and 14)

SEMESTER X

22MAT699 DISSERTATION 10 credits

CO-01: Identify and understand some open problem
CO-02 : Use various mathematical concepts /theorems for research problems
CO - 03: New proofs/methods/algorithms/solutions of the research problems
CO-04:Presentation and documentation of the research findings

CO-PO Mapping:

CO5	3	3	3			1	-	-	-	-	3	1

Electives

22MAT631 ALGEBRAIC GEOMETRY 3 0 0 3

Course Outcomes:

CO 1: To understand the various structures introduced in Algebraic geometry and to prove the standard theorems due to Hilbert/Krull/Noether which give correspondence between algebraic varieties and ideals, rings and fields.
CO 2: To understands properties of morphisms and its applications
CO 3: To familiarize the concept of rational maps
CO 4: To identify nonsingualrity through various criteria and understand the process of desingularisation
CO 5: To familiarize the idea of multiplicity and intersection with examples

Unit 1 AFFINE AND PROJECTIVE VARIETIES

Noetherian rings and modules; Emmy Noether's theorem and Hilbert's Basissatz; Hilbert's Nullstellensatz; Affine and Projective algebraic sets; Krull's Hauptidealsatz; topological irreducibility, Noetherian decomposition; local ring, function field, transcendence degree and dimension theory; Quasi-Compactness and Hausdorffness; Prime and maximal spectra; Example: linear varieties, hypersurfaces, curves.

Unit 2 MORPHISMS

Morphisms in the category of commutative algebras over a commutative ring; behaviour under localization; morphisms of local rings; tensor products; Product varieties; standard embeddings like the segre- and the d-uple embedding.

Unit 3 RATIONAL MAPS

Relevance to function fields and birational classification; Example: Classification of curves; blowing-up.

Unit 4 NONSINGULAR VARIETIES

Nonsingularity; Jacobian Criterion; singular locus; Regular local rings; Normal rings; normal varieties; Normalization; concept of desingularisation and its relevance to Classification Problems; Jacobian Conjecture; relationships between a ring and its completion; nonsingular curves.

Unit 5 INTERSECTIONS IN PROJECTIVE SPACE

Notions of multiplicity and intersection with examples.

CO5	3	3	3	3	3	-	-	-	-	-	1	

22MAT632 ALGEBRAIC TOPOLOGY 3 0 0 3

Course Outcomes:

CO 1: To understand the concept complexes define homology groups
CO 2: To obtain homology groups for various pseudo manifolds
CO 3: To prove Brouwer fixed point theorem and understand its uses
CO 4: To familiarise the concept of homotopy theory and its role in topological spaces
Co 5: To find out the fundamental groups of various spaces and anayse the topological structures.

Unit 1

Geometric Complexes and Polyhedra: Introduction. Examples. Geometric Complexes and Polyhedra; Orientation of geometric complexes.

Simplicial Homology Groups: Chains, cycles, Boundaries and homology groups, Examples of homology groups; The structure of homology groups.

Unit 2

The Euler Poincare's Theorem; Pseudomanifolds and the homology groups of Sn. [Chapter 1 Sections 1.1 to 1.4 & Chapter 2 Sections 2.1 to 2.5 from the text].

Unit 3

Simplicial Approximation: Introduction; Simplicial approximation; Induced homomorphisms on the Homology groups; The Brouwer fixed point theorem and related results;

Unit 4

The Fundamental Group: Introduction; Homotopic Paths and the Fundamental Group; The Covering Homotopy Property for S1;

[Chapter 3 Sectins 3.1 to 3.4; Chapter 4 Sections 4.1 to 4.3]

Unit 5

Examples of Fundamental Groups; The Relation Between H1(K) and p1(iKi); Covering Spaces: The definition and some examples. Basic properties of covering spaces. Classification of covering spaces. Universal covering spaces. Applications.

[Chapter 4: Sections 4.4, 4.5; Chapter 5 Sections 5.1 to 5.5 from the text]

CO5	3	3	3	3	3	-	-	-	-	-	1	

22MAT635 Information and Coding Theory 3 0 0 3

Course Outcomes:

CO-1: To understand the basic concepts of linear/error correcting codes and apply the concepts to encode and decode the information.
CO-2: To understand the concepts of dual /Hamming codes and apply the concept to find the parameters of given codes and their dual codes using standard matrix and polynomial operations .
CO-3: To familiarise the concepts of cyclic/BCH codes with required properties.
CO-4: To understand the concepts of weight enumerators and apply to find the weight information of the code. To familiarise the concept of MDS code.
CO-5: Apply the basic concepts of linear codes to solve problems .

Information Theory: Entropy, Huffman coding, Shannon-Fano coding, entropy of Markov process, channel and mutual information, channel capacity; Error correcting codes: Maximum likelihood decoding, nearest neighbour decoding, linear codes, generator matrix and parity-check matrix, Hamming bound, Gilbert-Varshamov bound, binary Hamming codes, Plotkin bound, nonlinear codes, Reed-Muller codes, Cyclic codes, BCH codes, Reed-Solomon codes, Algebraic codes.

CO5	3	3	3	3	3	-	-	-	-	-	1	

22MAT633 COMMUTATIVE ALGEBRA 3 0 0 3

Course Outcomes:

CO-1: To understand the basic definitions of rings, ideals and modules through examples; To construct new modules by tensor product, Hom, direct sum/product.
CO-2: To understand the fractions of modules and apply the fractions to construct the field from integral domain. To familiarize the decomposition of rings/modules.
CO-3: To familiarize the concept of integral dependence of extension ring and chain conditions of modules. To understand the definitions of valuations / Noetherian / Artin rings through examples.
CO-4: To study the basic properties of Noetherian/Artin rings; use the basic properties to characterize/decompose the Noetherian/Artin rings.
CO-5: To understand the basic definitions of discrete valuation rings and Dedekind domains. To familiarize the concept of dimension theory of rings/modules.

Unit 1 Rings and ideals, modules and operations on them (tensor product, Hom, direct sum and product).

Unit 2 Rings and modules of Fractions, primary decomposition.

Unit 3 Integral dependence and Valuations, Chain Conditions.

Unit 4 Noetherian Rings and Artin Rings.

Unit 5 Discrete valuation Rings and Dedekind Domains, Dimension theory.

22MAT636 LIE ALGEBRA 3 0 0 3

Course Outcomes:

CO 1: To understand the concept of Lie algebra and to know the substructures and operations on them.
CO 2: To familiarize nilpotent and solvable Lie algebras and prove the Engel's theorem
CO 3: To understand theorems on Semi simple Lie algebras and their applications .
CO 4: To derive various decomposition theorems on Lie algebras
Co 5: To understand the classification of Lie algebras through Dynkin diagrams.

Unit 1 Basic Concepts - Definition and Examples, Lie Algebra of Derivations, Adjoint Representation, Structure Constants, Direct Sums, Homomorphism and Isomorphisms, Ideals, Centre and Derived Algebra of a Lie Algebra, Simple Lie Algebras, The Normalizer of a Subalgebra and Centralizer of a Subset in Lie Algebras, Automorphism and Inner Automorphism of a Lie Algebra. (Book 1, Chapters 1 and 2).

Unit 2 Descending Central Series of a Lie Algebra, Nilpotent Lie Algebras. Derived Series of a Lie Algebra, Radical of a Lie Algebra, Solvable Lie Algebras, Engel's Theorem. (Book 1, Chapter 3).

Unit 3 Semi simple Lie Algebras - Theorems of Lie and Cartan, Jordan-Chevalley Decomposition, Cartan's Criterion. (Book 1, Chapter 4)

Unit 4 Killing Form, Inner Derivations, Abstract Jordan Decomposition, Complete Reducibility of

Lie algebras. (Book 1, Chapter 5)

Unit 5 The Weyl Group, Root Systems. (Book 1, Chapter 10)

22MAT640 THEORY OF MANIFOLDS 3 0 0 3

Course Outcomes:

CO 1: To familiarize the concept of manifolds and learn their properties
CO 2: To understand the concept of tangent spaces and its properties
CO 3: To generalize the ideas of curves/derivatives to manifolds
CO 4: To prove the inverse /implicit function theorems in manifolds
Co 5: To understand Riemannian manifolds and their relevance

Unit 1
Definition of Manifolds, Differentiable and Analytic Manifolds, Examples of Manifolds, Product of Manifolds, Mappings between Manifolds, Sub manifolds, Tangent Vectors.

Unit 2
Differentials, The Differential of a Function, Infinitesimal Transformation, Tangent Space, Tangent Vector.

Unit 3
Cotangent Space, Vector Fields, Smooth Curve in a Manifold. Differential Forms– k-forms, Exterior Differential, its Existence and Uniqueness.

Unit 4

Exact Differential Forms. De Rham Cohomology Group, Betti Number, Poincare's Lemma, Inverse Function Theorem, Implicit Function Theorem and its Applications, Integral Curve of a Smooth Vector Field.

Unit 5

Orientable Manifolds– Definition and Examples. Smooth Partition of Unity– Definition and Existence. Riemannian Manifolds– Definition and Examples.

22MAT639 Semigroup Theory 3 0 0 3

Course Outcomes:

CO1: To understand the basics of semigroups.
CO2: To understand the concepts of classes of semigroups like regular semigroups.
CO3: To understand the simple and semi simple semigroups.
CO4: To understand the Clifford semigroups and free bands.
CO5: To understand the inverse of the semi simple groups.

Unit I: - Basic Definitions- Monogenic Semigroups- Ordered Sets, Semi lattices and lattices- Binary relations; equivalences- Congruences- Free semigroups- Ideals and Rees Congruences.(Chapter I Section 1.1-1.7)
Unit II: - Greens Relations- Structure of D- classes- regular D- classes- regular semigroups-The sandwich Sets (Chapter II Section 2.1 – 2.5)
Unit III: - Simple and 0-simple semigroups- principal factors, Rees Theorem- Completely simple semigroups- Isomorphism and normalization (Chapter III Section 3.1 – 3.4)
Unit IV: -Completely Regular Semigroups- Clifford Decomposition- Clifford semigroups- Bands- Free Bands- Varieties of Bands(Chapter IV Section 4.1- 4.6)
Unit V: -Inverse semigroups- Preliminaries- The Natural partial order relation on an inverse semigroup- Congruences on Inverse semigroups- -The Munn Semigroup(Chapter V Section 5.1 – 5.4)

22MAT638 Representation Theory 3 0 0 3

Course Outcomes:
CO1: To understand the basic notions of representation theory.
CO2: To understand the irreducible and indecomposable representations.
CO3: To understand the characters of representations and extensions of representations.
CO4: To understand the Maschke's theorem and dual representations.

1. Basic objects and notions of representation theory: Associative algebras. Algebras defined by generators and relations. Group algebras. Quivers and path algebras. Lie algebras and enveloping algebras. Representations. Irreducible and indecomposable representations. Schur's lemma. Representations of sl(2).

2. Basic general results of representation theory. The density theorem. Representations of finite dimensional algebras. Semisimple algebras. Characters of representations. Jordan-Holder and Krull-Schmidt theorems. Extensions of representations.

3. Representations of finite groups, basic results. Maschke's theorem. Sum of squares formula. Duals and tensor products of representations. Orthogonality of characters. Orthogonality of matrix elements. Character tables, examples. Unitary representations. Computation of tensor product and restriction multiplicities from character tables. Applications of representation theory of finite groups.

4. Representations of finite groups, further results: Frobenius-Schur indicator. Frobenius determinant. Algebraic integers and Frobenius divisibility theorem. Applications to the theory of finite groups: Burnside's theorem. Induced representations and their characters (Mackey formula). Frobenius reciprocity. Representations of $GL(2; Fq)$. Representations of the symmetric group and the general linear group. Schur-Weyl duality. The fundamental theorem of invariant theory.

5. Representations of quivers. Indecomposable representations of quivers of type A1, A2, A3, D4. The triple of subspaces problem. Gabriel's theorem. Proof of Gabriel's theorem: Simply laced root systems, reflection functors.

6. CO-PO Mapping:

22MAT637 Linear Algebra (Only for M.Sc students) 3 0 0 3

Course Outcomes:

CO-1: To understand inner products and compute the angle/length of a vector. To apply Gram-Schmidt process to construct the orthonormal basis.
CO-2: To familiarize the concept of characteristic roots/ vectors and related properties. To apply the link between linear transformation and matrix to find characteristic roots/ vectors.
CO-3: To understand the construction of matrices for a linear transformation in the triangular/Jordan form. To apply the canonical form to find the rank of the matrix/transformation.
CO-4: To familiarize the types of matrices, understand their properties and apply them in transformation.
CO-5: To understand the process of diagonalizing and apply diagonalization to identify Conic Sections.

Unit 1 Review: Vector Spaces.
Inner Products, Angle and Orthogonality in Inner Product Spaces, Length of a Vector, Schwarz Inequality, Orthogonal Vectors, Orthogonal Complement, Orthogonal Bases: Gram-Schmidt Process. **(Sec. 4.4)**

Unit 2 The Algebra of Linear Transformations, Characteristic Roots, Invertible Linear transformations, Characteristic Roots, Characteristic Vector, Minimal Polynomial, Matrices, Matrix of a Linear Transformation. **(Sec. 6.1 to 6.3).**

Unit 3 Canonical Forms: Triangular, Nilpotent Transformations, Jordan and Rational Canonical Form, invariant subspaces, cyclic subspaces.
(Sec. 6.4 to 6.6).

Unit 4 Trace and Transpose, Determinants, Symmetric and Skew Symmetric Matrices, Adjoint and Hermitian Adjoint of a Matrix, Hermitian, Unitary and Normal Transformations, Self Adjoint and Normal Transformations. **(Sec. 6.8 to 6.10)**

Unit 5 Problems in Eigen Values and Eigen Vectors, Diagonalization, Orthogonal Diagonalization, Quadratic Forms, Diagonalizing Quadratic Forms, Conic Sections. **(Sec. 7.1 to 7.3 and 9.5 to 9.6 from Reference Book 2)**

22MAT634 Finite Field 3 0 0 3

Course Outcomes:

CO1: To understand the structure of finite fields.
CO2: To understand the concepts of cyclotomic polynomilas and related topics.
CO3: To understand the polynomials over finite field.
CO4: To understand the construction of irreducible polynomials and binomials and trinomials.
CO5: To understand the linear recurring sequences.

Structure of finite fields: characterization, roots of irreducible polynomials,traces, norms and bases, roots of unity, cyclotomic polynomial, representation of elements of finite fields, Wedderburn's theorem;
Polynomials over finite field: order of polynomials, primitive polynomials, construction of irreducible polynomials, binomials and trinomials, factorization of polynomials over small and large finite fields, calculation of roots of polynomials;

Linear recurring sequences: LFSR, characteristic polynomial, minimal polynomial, characterization of linear recurring sequences, Berlekamp-Massey algorithm; Applications of finite fields: Applications in cryptography, coding theory, finite geometry, combinatorics.

22MAT641 FIXED POINT THEORY 3 0 0 3

Course Outcomes:

CO-1: Understand and apply the concepts of fixed point theorems to prove the existence and uniqueness of solution to certain ordinary differential equations.
CO-2: To understand the existence and uniqueness of fixed point for non expansive and set valued mappings
CO-3: To understand the existence of best approximation point for non expansive mapping and its applications.
CO-4: To understand the existence and uniqueness of fixed point for partially ordered metric space.

Unit 1 Contraction Principle, and its variants and applications;

Unit 2 Fixed points of non-expansive maps and set valued maps, Brouwer-Schauder fixed point theorems,

Unit 3 Ky Fan Best Approximation Theorem, Principle and Applications of KKM - maps, their variants and applications.

Unit 4 Fixed Point Theorems in partially ordered spaces and other abstract spaces.

Unit 5 Application of fixed point theory to Game theory and Mathematical Economics.

22MAT647 **Operator Theory** **3 0 0 3**

Course Outcomes:

CO1: To understand compact operators and apply in Fredholm Theory and $C*$- algebras.
CO2: To understand and apply Gelfand-Neumark representation theorem.
CO3: To understand and apply projections, Toeplitz operators.

Compact operators on Hilbert Spaces. (a) Fredholm Theory (b) Index, $C*$- algebras - noncommutative states and representations, Gelfand-Neumark representation theorem, Von-Neumann algebras; projections, double commutant theorem, $L\infty$ functional calculus, Toeplitz operators.

22MAT642 FRACTALS 3 0 0 3

Course Outcomes:

CO1. Understand the basic concepts and structure of fractals .
CO2. Understand the space of fractals and transformation on metric spaces.
CO3. Understand the iterated function system with contraction mapping theorem.
CO4. Apply fractal concepts to compute fractal dimension of sets and construct fractal interpolation functions.
CO5. Understand the hidden variable fractal interpolation function, fractal splines and fractal surfaces.

Unit 1 Classical Fractals, Self-similarity - Metric Spaces, Equivalent Spaces.

Unit 2 The Space of Fractals, Transformation on Metric Spaces.

Unit 3 Contraction Mapping and Construction of fractals from IFS.

Unit 4 Fractal Dimension, Hausdorff measure and dimension, Fractal Interpolation Functions.

Unit 5 Hidden Variable FIF, Fractal Splines, Fractal Surfaces, Measures on Fractals.

22MAT643 HARMONIC ANALYSIS 3 0 0 3

Course Outcomes:

CO1. Understand the basic concepts of Fourier series, Fourier transforms and their related results.
CO2. Analyze the characters of discrete and compact groups with their related results.
CO3. Understand the concepts of Fourier integrals with their convergence results.
CO4. Understand the different summability and analyze the inequlity of Hausdroff and Young.
CO5. Understand the concepts of Hardy spaces and invariant subspaces and their results.

Unit 1 Fourier series and integrals – Definitions and easy results – The Fourier transform – Convolution – Approximate identities – Fejer's theorem – Unicity theorem – Parselval relation – Fourier Stieltjes Coefficients – The classical kernels.

Unit 2 Summability – Metric theorems – Pointwise summability – Positive definite sequences – Herglotz;s theorem – The inequality of Hausdorff and Young.

Unit 3 The Fourier integral – Kernels on R. The Plancherel theorem – Another convergence theorem – Poisson summation formula – Bachner's theorem – Continuity theorem.

Unit 4 Characters of discrete groups and compact groups – Bochners' theorem – Minkowski's theorem.

Unit 5 Hardy spaces - Invariant subspaces – Factoring F and M. Rieza theorem – Theorems of Szego and Beuoling.

TEXT BOOK:

Content and Treatment as in Henry Helson, Harmonic Analysis, Hindustan Book Agency, Chapters 1.1 to 1.9, 2.1 to 3.5 and 4.1 to 4.3

22MAT644 NONLINEAR PARTIAL DIFFERENTIAL EQUATIONS 3 0 0 3

Course Outcomes:

CO1- Understand the general concept of weak solution and the criterion of having weak solution for hyperbolic equation.
CO2- Able to model the basic diffusion processes and understand the mathematical methods that are useful in studying the structure of their solutions.
CO3-Understand the existence and uniqueness of traveling wave solutions solutions.
CO4-Understand the concept of nonlinear eigenvalue problem the stability of equilibrium solutions for reaction-diffusion equation.
CO5-Understand the formulation of system of PDEs and their applications.

Review of first order equations and characteristics.
Unit 1 Weak solutions to hyperbolic equations - discontinuous solutions, shock formation, a formal approach to weak solutions, asymptotic behaviour of shocks.

Unit 2 Diffusion Processes - Similarity methods, Fisher's equation, Burgers' equation, asymptotic solutions to Burgers' equations.

Unit 3 Reaction diffusion equations - traveling wave solutions, existence of solutions, maximum principles and comparison theorem, asymptotic behaviour.

Unit 4 Elliptic equations - Basic results for elliptic operators, eigenvalue problems, stability and bifurcation.

Unit 5 Hyperbolic system.

22MAT645 WAVELET ANALYSIS 3 0 0 3

Course Outcomes:

CO1 Understand and apply the concepts of DFT and its significance in Engineering problems
CO2 Understand and apply the concept of first stage wavelet basis and iterative stages of wavelet bases in finite dimensional space.
CO3 Understand and apply the concept of first stage wavelet basis and iterative stages of wavelet bases in infinite dimensional space.
CO4 Understand the concepts of Fourier transform and MRA and the construction of wavelets and its applications.

Unit 1 Basic Properties of the Discrete Fourier Transform, Translation - Invariant Linear Transformations. The Fast Fourier Transform.

Unit 2 Construction of Wavelets on Z_N, The First Stage Construction of Wavelets on Z_N, The Iteration Step"s. Examples and Applications, $l2(Z)$

Unit 3 Complete Orthonormal Sets in Hilbert Spaces, $L_2([-\pi,\pi))$ and Fourier Series, The Fourier Transform and Convolution on $l_2(Z)$, First-Stage Wavelets on Z
The Iteration Step for Wavelets on Z , Implementation and Examples.

Unit 4 $L_2(R)$ and Approximate Identities, The Fourier Transform on R, Multiresolution Analysis and Wavelets,

Unit 5 Construction of Multiresolution Analyses, Wavelets with Compact Support and Their Computation.

22MAT648 Fourier transform and Distribution Theory 3 0 0 3

Unit1: Test functions and Distributions: Introduction-Test function spaces -calculus with distributions –localization-supports of distributions-Distributions as derivatives-convolutions.
Unit 2: Fourier Transforms: Basic properties-Tempered distributions-paley-wiener theorems-sobolev's lemma
Unit3: Applications to Differential Equations-Fundamental solutions-Elliptic equations

22MAT655 ADVANCED NUMERICAL ANALYSIS 3 0 0 3

Course Outcomes:

CO1. To understand the Quantitative analysis of solution of
trancendental and polynomial equations.
CO2. To understand the Quantitative analysis of solution of system of linear algebraic equations, ordinary and
partial differential equations.
CO3. To understand the interpolation of polynomial approximation by means of computational methods.

UNIT I :
Transcendental and polynomial equations
Transcendental and polynomial equations: Iteration methods based on second degree equation - Rate of convergence - iterative methods – Methods for finding complex roots – iterative methods : Birge-Vieta method, Bairstow's method, Graeffe's root squaring method
UNIT II
System of Linear Algebraic Equations
System of Linear Algebraic Equations - Direct methods - Gauss Jordan Elimination Method – Triangularization method – Cholesky method – partition method. Error Analysis – Iteration methods : Jacobi iteration method – Gauss - Seidal iteration method – SOR method. Jacobi method for symmetric matrices.

UNIT III
Interpolation and Approximation
Interpolation and Approximation - Hermite Interpolations – Piecewise and Spline Interpolation – Appproximation – Least Square Approximation - Numerical Differentiation - Numerical Integration – Methods based on Interpolation.
UNIT IV
Numerical Solutions of ODE
Ordinary Differential Equations : Multi – step method – Predictor – Corrector method – Boundary value problem – Initial value methods – Shooting method – Finite Difference method (with MATLAB programs).
UNIT V
Numerical solutions of PDE
Partial Differential Equations: Initial and Boundary value problems - Parabolic Problems – one dimension problems with constant coefficients – Elliptic Problems with Dirichlet Condition - Finite difference methods (with MATLAB programs)
(Questions not to be asked from MATLAB)

22MAT659 Nonlinear Dynamics and Chaos 3 0 0 3

Course Outcomes:

CO1: Able to analyse the behaviour of dynamical systems (e.g. find periodic orbits and assess their stability, draw phase portraits, etc.) expressed as either a discrete-time mapping or a continuous-time flow.

CO2: Able to analyse qualitative changes (i.e. bifurcations) to dynamical systems as system parameters are varied.

CO3: Able to understand how and why a dynamical system becomes chaotic and how to quantify chaotic dynamics.

CO4: Able to apply the techniques of nonlinear dynamics to analyse various physical, biological, and engineering systems.

Unit -1. One Dimensional flows

Flows on the line-A Geometric Way of Thinking, Fixed Points and Stability, Population Growth, Linear Stability Analysis, Existence and Uniqueness, Solving Equations on the Computer. Bifurcations-Saddle-Node Bifurcation, Transcritical Bifurcation, Pitchfork Bifurcation.

Unit -2. Two-Dimensional Flows

Linear Systems-Definitions and Examples, Classification of Linear Systems. Phase Plane-Phase Portraits, Fixed Points and Linearization, Index Theory. Limit Cycles- Ruling Out Closed Orbits, Poincare-Bendixson Theorem, Lienard Systems, Relaxation Oscillators, Weakly Nonlinear Oscillators. Bifurcations Saddle-Node, Transcritical, and Pitchfork Bifurcations, Hopf-Bifurcations. Oscillating Chemical Reactions, Global Bifurcations of Cycles, Hysteresis in the Driven Pendulum and Josephson Junction, Coupled Oscillators and Quasiperiodicity, Poincare Maps.

Unit-3. Chaos

Lorenz Equations-Simple Properties of the Lorenz Equations, Chaos on a Strange Attractor, Lorenz Map, Exploring Parameter Space. One-Dimensional aps- Fixed Points and Cobwebs, Logistic Map: Logistic Map: Analysis, Periodic Windows, Liapunov Exponent, Universality and Renormalization.

Text / Reference Books:

22MAT646 MATHEMATICAL PHYSICS 3 0 0 3

***Objective**: This course intends to introduce applications of various mathematical techniques to problems of Theoretical Physics. Examples could be chosen from all 4 traditional divisions of Modern Fundamental Theoretical Physics – Classical Mechanics, Electrodynamics, Quantum Mechanics and Statistical Physics.*

Course Outcomes:

CO1 Applying Vector Calculus in Electromagnetic Theory and Fluid Mechanics
CO2 Understand and apply the concept of tensors in physics and geometry and covariance of law of physics
CO3 Understand and apply the concept of calculus of variation in classical mechanics related problems
CO4 Apply the concepts of Gamma, Beta functions etc in Problems related to quantum mechanics
CO5 General applications of Linear Algebra in various applications of Physics

Unit 1

Vector calculus and applications in electromagnetic theory and fluid mechanics.

Unit 2

Introduction to tensor calculus: review of basics, index notation, tensors in physics and geometry, Levi-Civita tensor, transformations of vectors, tensors and vector fields, covariance of laws of physics.

Unit 3

Calculus of variations and extremal problems, Lagrange muItipliers to treat constraints, Introduction to the Lagrangian and Hamiltonian formulations of classical mechanics with applications.

Unit 4

Gamma and Beta functions, Dirac delta function, Special functions, Review of Legendre, Bessel functions and spherical harmonics (with applications to Quantum mechanics), series solutions, generating functions, orthogonality and completeness,

Unit 5

Applied linear algebra: Dirac notation, dual vectors, projection operators, symmetric hermitian, orthogonal and unitary matrices in physics, diagonalization, orthogonality and completeness of eigenvectors, spectral decomposition and representation, simultaneous diagonalization, normal matrices, applications to coupled vibrations, Schrodinger equation in matrix form.

TEXT BOOKS:

CO5	3	3	3	3	3	-	-	-	-	-	1	

22MAT671 QUEUING THEORY AND INVENTORY CONTROL THEORY 3 0 0 3

Course Outcomes:

CO1 Understand the Inventory Concepts and study further the components of Inventory control
CO2 Understand the Deterministic Continuous Review model and Deterministic Periodic Review model.
CO3 Understand the classical EOQ , Non zero lead time and EOQ with shortages allowed
CO4 Understand the Deterministic Multiechelon Inventory models for supply chain management

Unit 1 Inventory concept – Components of Inventory model.

Unit 2 Deterministic Continuous Review model - Deterministic Periodic Review model.

Unit 3 The classical EOQ – Non zero lead time – EOQ with shortages allowed.

Unit 4 Deterministic Multiechelon Inventory models for supply chain management.

Unit 5
A stochastic continuous review model – A stochastic single period model for perishable products.

TEXT BOOKS

CO3	2	2	3	3	3	-	-	-	-	-	1	
CO4	3	3	3	3	3	-	-	-	-	-	1	

22MAT672 STATISTICAL PATTERN CLASSIFICATIONS 3 0 0 3

Course Outcomes:

CO1 To gain knowledge about pattern classification and dimensionality reduction method
CO2 To understand the use of Maximum-likelihood and Bayesian Parameter Estimation
CO 3 To understand and apply Nonparametric Techniques and Linear Discriminant Functions
CO4 To apply Nonmetric methods and Algorithm-independent Machine Learning
CO5 To implement clustering methods under unsupervised learning

Unit 1 Introduction and Bayesian Decision Theory
Introduction – Pattern recognition systems – the design cycle – learning and adaptation – Bayesian decision theory – continuous features – Minimum error rate classification – discriminant functions and decision surfaces – the normal density based discriminant functions.

Unit 2 Maximum-likelihood and Bayesian Parameter Estimation
Maximum likelihood estimation – Bayesian estimation - Bayesian parameter estimation – Gaussian case and general theory – problems of dimensionality – components analysis and discriminants – hidden Markov models.

Unit 3 Nonparametric Techniques and Linear Discriminant Functions
Nonparametric techniques – density estimation – Parzen windows – nearest neighborhood estimation – rules and metrics – linear discriminant functions and decision surfaces – generalized linear discriminant functions – two-category linearly separable case – minimizing the perception criterion function.

Unit 4 Nonmetric methods and Algorithm-independent Machine Learning
Nonmetric methods – decision trees – CART methods – algorithm-independent machine learning – lack of inherent superiority of any classifier – bias and variance for regression and classification – resampling or estimating statistics – estimating and comparing classifiers.

Unit 5 Unsupervised Learning and Clustering
Unsupervised learning and clustering – mixture densities and identifiability – maximum likelihood estimates – application to normal mixtures – unsupervised Bayesian learning – data description and clustering – criterion functions for clustering – hierarchical clustering – component analysis – low-dimensional representations and multi-dimensional scaling.

22MAT673 STATISTICAL QUALITY CONTROL AND SIX SIGMA QUALITY ANALYSIS 3 0 0 3

Course Outcomes:

CO1 To develop basic knowledge about TQM
CO2 To understand old and new quality improvement tools
CO3 To understand the aspects of project planning and capability analysis
CO4 To understand the concept of Six Sigma and Lean methods
CO5 To apply Taguchi methods

Unit 1 Introduction to Quality Management – Japanese System of Total Quality Management.

Unit 2 Quality Circles - 7 Quality Control tools - 7 New Quality Control tools.

Unit 3 ISO 9000 Quality system Standards - Project Planning, Process and measurement system capability analysis - Area properties of Normal distribution.

Unit 4 Metrics of Six sigma, The DMAIC cycle - Design for Six Sigma - Lean Sigma – Statistical tools for Six Sigma.

Unit 5 Taguchi methods. Loss functions and orthogonal arrays and experiments.

22MAT674 THEORY OF SAMPLING AND DESIGNS OF EXPERIMENTS 3 0 0 3

Course Outcomes:

CO1 To study different types of basic sampling methods
CO2 To understand the types of estimators and their applications
CO3 To understand with and without replacement sampling methods
CO4 To understand the use of sampling in experimental designs
CO5 To apply factorial experiments

Unit 1
Stratified random sampling, estimation of the population mean, total and proportion, properties of estimators, various methods of allocation of a sample, comparison of the precisions of estimators under proportional allocation, optimum allocation and srs. Systematic sampling. Comparison of systematic sampling - srs and stratified random sampling for a population with a linear trend.

Unit 2
Unbiased ratio type estimators - Hartly-Ross estimator, regression method of estimation. Cluster sampling, single stage cluster sampling with equal and unequal cluster sizes, estimation of the population mean and its standard error. Two-stage cluster sampling with equal and unequal cluster sizes, estimation of the population mean and its standard error.

Unit 3
Unequal probability sampling, PPS sampling with and without replacement, cumulative total method, Lahiris method, Midzuno-Zen method, estimation of the population total and its estimated variance under PPS wr sampling, ordered and unordered estimators of the population total under PPS wor, Horwitz – Thomson estimator.

Unit 4
Elementary concepts (one and 2 way classified data) Review of elementary design (CRD, RBD, LSD) Missing plot technique in RBD and LSD with one and two missing values, Gauss-Markov theorem, BIBD: Elementary parametric relations, Analysis, PBIBD.

Unit 5
General factorial experiments, factorial effects, best estimates and testing the significance of factorial effects, study of 2^3 and 2^4 factorial experiments.

22MAT675 TIME SERIES ANALYSIS 3 0 0 3

Course Outcomes:

CO1 To gain in-depth knowledge about time series and its components
CO2 To understand the smoothening concepts and the relevant tests.
CO3 To understand and apply the concepts of autocorrelation and autocovariance
CO4 To apply various types of autoregressive models
CO5 To understand the estimation procedures in time series

Unit 1 Time series, components of time series, additive and multiplicative models, determination of trend, analysis of seasonal fluctuations.

Unit 2 Test for trend and seasonality, exponential and moving average smoothing, holt-winter smoothing, forecasting based on smoothing.

Unit 3 Time series as a discrete parameter stochastic process, auto covariance and auto correlation functions and their properties, stationary processes, test for stationarity, unit root test, stationary processes in the frequency domain, spectral analysis of time series.

Unit 4 Detailed study of the stationary processes: moving average (MA), autoregressive (AR), autoregressive moving average (ARMA) and autoregressive integrated moving average (ARIMA) models.

Unit 5 Estimation of ARMA models, maximum likelihood method (the likelihood function for a Gaussian AR(1) and a Gaussian MA(1)) and Least squares, Yule-Walker estimation for AR Processes, choice of AR and MA periods, forecasting, residual analysis and diagnostic checking.

22MAT676 STATISTICAL TECHNIQUES FOR DATA ANALYTICS 3-0-0-3

Course Outcomes:

CO1 To understand data collection methods and to apply descriptive statistics to data
CO2 To understand and apply data fitting methods and analyze the outcomes
CO3 To analyse data using dimensionality reduction methods
CO4 To understand and apply clustering methods
CO5 To understand and apply nonmetric decision making methods

Data Collection, classification and analysis - Sampling methods, classification of data and representation of data- bar and pie charts – histogram frequency polygon - Data Analysis Measures of Central tendency and dispersion - Mean, median, mode, absolute, quartile and standard deviations, skewness and kurtosis for both grouped and ungrouped data. Association of attributes.

Curve fitting and interpolation - Fitting of straight lines and curves - Correlation, regression, fitting of simple linear lines, polynomials and logarithmic functions - Interpolation and extrapolation methods - Binomial expansion, Newton and Gauss methods.

Index numbers and time series analysis - Types of index numbers, construction of index numbers such as simple aggregate, weighted aggregate index numbers, chain index numbers and consumer price indices - Time series and its components and computation of trends and variations - Seasonal variations - Trend analysis methods.

Decision analysis and Game theory - Payoffs, regrets, maximin and minimax criteria and loss and risks – Games – payoff matrix, saddle point, value of game and methods of solving – two-person-zero-sum games, dominance method, sub-game method

22MAT677 Mathematical Finance 3 0 0 3

Course Outcomes:

CO1: To understand the basic concepts of financial marker models
CO2: To understand the valuation and hedging in complete markes.
CO3: Apply stochastic calculus for some financial market models.

Financial market models in finite discrete time, Absence of arbitrage and martingale measures, Valuation and hedging in complete markets, Basic facts about Brownian motion, Stochastic integration, Stochastic calculus: ItÔ's formula, Girsanov transformation, Itˆo's representation theorem, BlackScholes formula.

22MAT658 Singular Perturbation Theory 3 0 0 3

Course Outcomes:

CO1: To understand basics of PDE and solutions
CO2: To understand the basic concepts of regular perturbation theory.
CO3: To understand the singular perturbation theory.

UNIT I: Partial Differential Equations
Theory of distributions in n dimensions, fundamental solutions to Laplace, wave and heat equations in 1D , 2D and 3D - Construction of Green's functions for Laplace, wave and heat equations using method of images, partial transforms, complete transforms, eigenfunction expansions.

UNIT II: Regular Perturbation Theory
Asymptotic approximations - regular perturbation for roots of a polynomial, differential equations, eigenvalue problems and partial differential equations; method of strained coordinates - eigenvalues of nonlinear boundary-value problems; stationary and Hopf bifurcations.

UNIT III: Singular perturbation theory
Multiple scales analysis- singular perturbation theory for algebraic equations, boundary layer problems – singular perturbation theory for nonlinear dynamics - WKB approximation – homogenization theory.

22MAT651 ADVANCED BOUNDARY LAYER THEORY 3 0 0 3

Course Outcomes:

CO1: To understand the limitations of ideal fluid dynamics and to understand the significance of Prandtl's boundary layer theory, two-dimensional boundary layer equations, Boundary layer flow over a flat plate and a wedge.

CO2: To understand the energy integral equation of 2-dimensional laminar boundary layers, boundary layers with pressure gradient and application of Von-Karman's integral equations.

CO3: To understand the displacement, momentum and energy thickness, Von-Karman's momentum equation for laminar boundary layer, coefficient of drag, Similar solutions & separation of boundary layer.

CO4: To understand MHD boundary layers, MHD Blasius flow, Thermal boundary layers with and without coupling of momentum and energy equations, forced convection in the laminar flow past a flat plate

CO5: To understand the thermal boundary layer in the free convection from a heated plate, the thermal energy integral equation and the boundary layer control using suction and injection.

Unit 1

Introduction – limitations of ideal fluid dynamics – Importance of Prandtl's boundary layer theory - boundary layer equations in two dimensional flows – boundary layer flow over a flat plate – Blasius solution – Boundary layer over a wedge.

Unit 2
Energy integral equation for two-dimensional laminar boundary layers in incompressible flow – application of Von Karman's integral equations to boundary layer with pressure gradient.

Unit 3
Displacement, momentum, energy thickness – axially symmetric flows – momentum equation for laminar boundary layer by von Karman – Wall shear and drag force on a flat plate due to boundary layer – coefficient of drag. Boundary layer equations for a 2D viscous incompressible fluid over a plane wall – Similar solutions – Separation of boundary layer flow.

Unit 4
Hydromagnetic Boundary layers – Hartman Layer – MHD Blasius flow. Thermal boundary layers – thermal boundary layer equation in two dimensional flow – Thermal boundary layers with and without coupling of velocity and temperature field – forced convection in a laminar boundary on a flat plate.

Unit 5
Polhausen's method of exact solution for the velocity and thermal boundary layers in free convection from a heated plate – thermal energy integral equation. Boundary layer control using suction and injection.

22MAT652 COMPUTATIONAL FLUID DYNAMICS 3 0 0 3

Course Outcomes:

CO1: To understand the basic concepts of fluid dynamics.

CO2: To understand the different types of PDE and their solutions.
CO3: To understand the basics of finite volume method.
CO4: To understand the basics of turbulence modelling.

Unit 1 Review of Conservation equations for mass, momentum and energy; coordinate systems; Eulerian and Lagrangian approach, Conservative and non-conservative forms of the equations, rotating co-ordinates.

Unit 2 Classification of system of PDEs: parabolic elliptic and hyperbolic; Boundary and initial conditions; Overview of numerical methods; Review of Finite Difference Method, Introduction to integral method, method of weighted residuals, finite elements finite volume method & least square method.

Unit 3 Numerical Grid Generation: Basic ideas, transformation and mapping, unstructured grid generation, moving grids, unmatched meshes. Finite Volume Method: Basic methodology, finite volume discretization, approximation of surface and volume integrals, interpolation methods - central, upwind and hybrid formulations and comparison for convection-diffusion problem; Basic computational methods for compressible flows.

Unit 4 Advanced Finite Volume methods: FV discretization in two and three dimensions, SIMPLE algorithm and flow field calculations, variants of SIMPLE, Turbulence and turbulence modelling, illustrative flow computations.

Unit 5 Introduction to turbulence modelling, CFD methods for compressible flows.

22MAT653 FINITE ELEMENT METHOD 3 0 0 3

Course Outcomes:

CO-1: Understand the basic concepts of weighted residue and energy methods.
CO-2: Understand the concepts of global and local finite element models and its derivations.
CO-3: Application of interpolation and various polynomials to model stiffness matrices.
CO-4: Application of global and local finite element models with boundary conditions in a steady state problem.
CO-5: Usage of finite element concept for one dimensional heat and wave equations.

Unit 1 Finite Element Method: Variational formulation - Rayleigh-Ritz minimization - weighted residuals - Galerkin method applied to boundary value problems.

Unit 2 Global and local finite element models in one dimension - derivation of finite element equation.

Unit 3 Finite element interpolation - polynomial elements in one dimension, two dimensional elements, natural coordinates, triangular elements, rectangular elements, Lagrangian and Hermite elements for rectangular elements - global interpolation functions.

Unit 4 Local and global forms of finite element equations - boundary conditions - methods of solution for a steady state problem - Newton-Raphson continuation.

Unit 5 One dimensional heat and wave equations.

22MAT654 MAGNETO-HYDRO DYNAMICS 3 0 0 3

Course Outcomes:

CO1: To understand Maxwell's electromagnetic equations, MHD equations and MHD approximations, induction equation, Alfven's theorem, Ferraro's law of irrotation and the decomposition of magnetic stresses into a tension and pressure
CO2: To understand the magentohydrostatics, hydromagnetic equilibria, force-free magnetic fields, Chandrasekar's Theorem on isolated bodies without a magnetic fields, General solution of force-free magnetic fields when "alpha" is constant.
CO3: To understand Hartman Flow and Hartman boundary layer and simple flow problems with tensor electrical conductivity
CO4: To understand the propagation of magnetohydrodynamic waves in incompressible and compressible fluids and analysing stability of MHD systems using normal mode analysis
CO5: To understand Bernstein's method of small oscillations and Chandrasekar's generalization of Jean's criterion for gravitational stability for MHD flows

Unit 1
Electromagnetic field equations – Maxwell's equations - Electromagnetic effects and the magnetic Reynolds number – induction equation. Alfven's Theorem – Ferraro's Law of irrotation – Electromagnetic stresses.

Unit 2
Magnetohydrostatics and steady states – Hydromagnetic equilibria and Force free magnetic fields — Chandrasekhar's theorem – General solution of force free magnetic field when**Error! Objects cannot be created from editing field codes.** is constant – Some examples of force free fields.

Unit 3
Steady laminar motion – Hartmann flow. Tensor electrical conductivity, Hall current and ion slip – simple flow problems with tensor electrical conductivity.

Unit 4
Magnetohydrodynamic waves - Alfven waves – Stability of hydromagnetic systems - Normal mode analysis - Squire's theorem – Orr-Sommerfield equation – Instability of linear pinch – Flute instability – A general criterion for stability.

Unit 5 Bernstein's method of small oscillations – Jeans Criterion for Gravitational stability – Chandrasekhar's generalization for MHD and rotating fluids.

22MAT657 STOCHASTIC DIFFERENTIAL EQUATIONS 3 0 0 3

Course Outcomes:

CO1: To understand and the basic ideas of deterministic and random differential equations.

CO2: To understand the basics of Brownian motion and Markov property.

CO3:To understand the basic of existence and uniqueness of stochastic differential equations.

Introduction: Deterministic and random differential equations, stochastic differential, chain rule.
Probability Theory: Basic definitions, expected value, variance, independence, some probabilistic methods, law of large numbers, central limit theorem, conditional expectation, martingales.
Brownian Motion: Definition, elementary properties, construction of Brownian motion, sample path properties, Markov property.
Stochastic Integrals: Ito's Integral, Ito's chain and product rules, Ito's integral in higher dimensions.
Stochastic Differential Equations: Existence and uniqueness of solutions, properties of solutions, linear stochastic differential equations.

22MAT656 Hemodynamics 3 0 0 3

Course Objective:

CO1: To understand and the basic ideas of fluid dynamics, the significance of Lagrangean and Eulerian frames of reference, the material derivative, equation of conservation of mass and momentum, and a review of Fourier Series and Bessel's equation.

CO2: To understand the basic rheological, viscoelastic, Newtonian & non-Newtonian properties of blood, the elastic nature of wall and permeability of different layers of wall, significance of Reynolds and Womersley number .

CO3:To understand the modelling of blood flow with constant, oscillatory and pulsatile pressure garadient and to analyze pathological states using medically significant hemodynamic wall parameters

CO4) To understand the recent developments in blood flow, the challenges involved in modelling and to identify research level problems and reviewing a few articles.

Unit 1. Microscopic and macroscopic scales, Eulerian and Lagrangian motion, acceleration in flow field, laminar and turbulent flow, steady, oscillatory and pulsatile flow, governing equations – conservation of mass, conservation of momentum - physical interpretation, Fourier series and Bessel Equations.
Unit 2. Introduction to physiology of human circulatory system, rheology of blood, composition of blood, viscosity and density of blood, viscoelasticity of blood, Newtoian and non-Newtonian behaviour of blood, Mechanism of arterial wall, permeability and porosity of different wall layers, Dean number, force balance, pressure, viscosity, shear stress, inertia, and vessel elasticity. Pressure gradient – physical interpretation, Reynolds number and Womersley number.
Unit 3. Principles of blood flow in arteries, parallel plate approximation, uniform circular cross section, constant, oscillatory and pulsatile pressure gradient; no slip conditions- single phase model, quantitative and qualitative analysis of results in the normal and pathological state of cardiovascular disease - hemodynamic perspective.
Unit 4. Recent developments in blood flow modeling, strategy and challenges in biomechanics, Identifying gap in the literature of mathematical modeling, cardiovascular physiology and biomechanics. Identifying research level open problems in the field of hemodynamics.

22MAT662 COMPUTER AIDED DESIGN OF VLSI CIRCUITS 3 0 0 3

Course Outcomes:

CO1: To understand the basics of VLSI Physical design.
CO2: To understand the basics of graph algorithms and complexities.
CO3: Apply graph algorithms for circuit partitioning and compation
CO4: Apply graph algorithms for circuit routings.

Unit 1
Introduction of Design Methodologies and Graph Theory: The VLSI Design Problems - Design Methods – Design Cycle – Physical Design Cycle - Design Styles.

Unit 2
Algorithmic and System Design - Structural and Logic Design - Layout Design. Graph terminologies – Data structures for the representation of Graphs – Algorithms: DFS – BFS - Dijkstra's shortest path algorithm – Prim's algorithm for minimum spanning trees. Combinatorial Optimization Problems – Complexity Class – P - NP Completeness and NP Hardness problems.

Unit 3
Placement, Partitioning and Floor Planning: Types of Placement Problems – Placement Algorithms – K-L Partitioning Algorithm. Optimization Problems in Floor planning - Shape Function and Floor plan Sizing.

Unit 4
Routing and Compaction: Types of Routing Problems – Area Routing – Channel Routing – Global Routings.

Unit 5 1D and 2D Compaction. Gete level – Switch level Modeling and Simulations.

22MAT663 CRYPTOGRAPHY 3 0 0 3

Course Outcomes:

CO-1: Understand the basic concepts of classical ciphers.
CO-2: Understand the concepts of encryptions and pseudorandomness.
CO-3: Understand the concepts private-key encryption.
CO-4: Understand the concepts of EIGamal encryption.

Unit 1 Classical ciphers: Cryptanalysis of classical ciphers, Probability theory, Perfect security. **Block ciphers:** DES, AES, Block cipher modes of operation.

Unit 2 Private-key encryption: Chosen plaintext attacks, Randomised encryption, Pseudorandomness, Chosen cyphertext attacks.

Unit 3 Message authentication codes: Private-key authentication, CBC-MAC, Pseudorandom functions, CCA-secure private-key encryption.

Unit 4 Hash function: Integrity, Pre-image resistance, 2nd pre-image resistance, Collision freeness. **Key distribution:** Key distribution centres, Modular arithmetic and group theory, Diffie-Hellman key exchange.

Unit 5 Public-key Distribution: EIGamal encryption, Cramer-Shoup encryption, Discrete

logarithm problem.
Digital Signatures: RSA signatures, RSA-FDH and RSA-PSS signatures, DSA signatures.

22MAT664 FUZZY SETS AND ITS APPLICATIONS 3 0 0 3

Course Outcomes:

CO-1: Understand the basic concepts of Fuzzy sets
CO-2: Understand the concepts of arithmetci operations on fuzzy numbers.
CO-3: Understand the concepts Fuzzy relations.
CO-4: Understand the concepts of Fuzzy logic.
CO-5: Understand the concepts of uncertainty and crisp sets.

Unit 1 Fuzzy Sets
Crisp Sets - an Overview, Fuzzy Sets - Definition and Examples, α - Cuts and its Properties, Representations of Fuzzy Sets, Extension Principles of Fuzzy Sets, Operations on Fuzzy Sets - Fuzzy Complements, Fuzzy Intersections, Fuzzy Unions, Combinations of Operations, Aggregation Operations.

Unit 2 Fuzzy Arithmetic
Fuzzy Numbers, Arithmetic Operations on Intervals, Arithmetic Operations on Fuzzy Numbers.

Unit 3 Fuzzy Relations
Binary Fuzzy relations, Fuzzy Equivalence Relations, Fuzzy Compatibility Relations.

Unit 4 Fuzzy Logic
Classical Logic, Multivalued Logic, Fuzzy Propositions, Fuzzy Quantifiers, Linguistic Hedges, Inference from Conditional Fuzzy Propositions, Conditional and Qualified Propositions and Quantified Propositions.

Unit 5 Uncertainty-based Information
Information and Uncertainty, Non Specificity of Crisp Sets – Non Specificity of Fuzzy Sets, Fuzziness of Fuzzy Sets, Uncertainty In Evidence Theory, Principles of Uncertainty.

22MAT665 INTRODUCTION TO SOFT COMPUTING 3 0 0 3

Course Outcomes:

CO-1: Understand the various types of soft computing techniques
CO-2: Understand the concepts of artificial intelligence.
CO-3: Understand and apply the concepts fuzzy logic in optimization problems.
CO-4: Understand the concepts of neural networks.
CO-5: Understand the concepts of genetic algorithms.

Unit 1 Soft Computing
Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing.

Unit 2 Artificial Intelligence
Introduction, Various types of production systems, characteristics of production systems, breadth first search, depth first search techniques, other Search Techniques like hill Climbing, Best first Search, A* algorithm, AO* Algorithms and various types of control strategies.

Unit 3 Fuzzy Logic
Crisp set and Fuzzy set, basic concepts of fuzzy sets, membership functions. Basic operations on fuzzy sets, Properties of fuzzy sets, Fuzzy relations. Propositional logic and Predicate logic, fuzzy If - Then rules, fuzzy mapping rules and fuzzy implication functions, Applications.

Unit 4 Neural Networks
Basic concepts of neural networks, Neural network architectures, Learning methods, Architecture of a back propagation network, Applications.

Unit 5 Genetic Algorithms
Basic concepts of genetic algorithms, encoding, genetic modeling.
Hybrid Systems: Integration of neural networks, fuzzy logic and genetic algorithms.

CO5	3	3	3	3	3	-	-	-	-	-	1	

22MAT666 OBJECT- ORIENTED PROGRAMMING AND PYTHON 3 0 0 3

Course Outcomes:

CO-1: Understand the various classes in C++
CO-2: Understand the concepts of constructors and operators in C++
CO-3: Understand and apply the concepts functions for some problems.
CO-4: Understand the concepts of RTTI typeid dynamic casting.
CO-5: Understand and practice the Python programming.

Unit 1 Object-oriented programming concepts – objects – classes – methods and messages – abstraction and encapsulation – inheritance – abstract classes – polymorphism.

Introduction to C++ – classes – access specifiers – function and data members – default arguments – function overloading – friend functions – const and volatile functions - static members – Objects - pointers and objects – constant objects – nested classes – local classes.

Unit 2 Constructors – default constructor – Parameterized constructors – Constructor with dynamic allocation – copy constructor –destructors – operator overloading – overloading through friend functions – overloading the assignment operator – type conversion – explicit constructor.

Unit 3 Function and class templates - Exception handling try-catch-throw paradigm – exception specification – terminate and Unexpected functions – Uncaught exception.

Unit 4 Inheritance – public, private, and protected derivations – multiple inheritance - virtual base class – abstract class – composite objects Runtime polymorphism – virtual functions – pure virtual functions – RTTI – typeid – dynamic casting – RTTI and templates – cross casting – down casting.

Unit 5 Python Programming.

22MAT667 Graph Analytics and Applications 3 0 0 3

Unit 1

Review of Graphs: Graphs and Sub graphs, isomorphism, matrices associated with graphs, degrees, walks, connected graphs, shortest path algorithm. Eccentricity.

Unit 2

Connectivity: Graph connectivity, k-connected graphs and blocks.

Euler and Hamilton Graphs: Euler graphs, Euler's theorem. Hamilton cycles, Chinese-postman problem, approximate solutions of traveling salesman problem. Closest neighbour algorithm. Matchings, maximal matchings. Coverings and minimal coverings.

Graph Dominations and Independent sets. Vertex colorings, Planar graphs. Euler theorem on planar graphs.

Unit 3

Large Scale networks: Introduction. Graph and Networks. Network topologies. Examples of large-scale networks and networked systems. Power Law distributions. Scale-free networks.

Unit 4

Random graph models for large networks: Erdos-Renyi graphs, power-law graphs, small world graphs, phase transitions. Network stabilities.

Unit 5

Graph Networks and Centralities:. Degree and distance centralities. Closeness centrality. Betweeness centrality. Eigenvector centrality and Page ranking algorithm and applications. Clustering coefficient and clustering centrality. Introduction to community detections.

Case Studies: Transport networks, Biological networks, ect.,

22MAT661 ALGORITHMS FOR ADVANCED COMPUTING 3-0-0-3

Course Outcomes:

CO-1: To understand various types of classifications.
CO-2: To familiarise the concepts of decision trees and their applications.
CO-3: To understand the basis of clustering and information extraction.
CO-4: To familiarise various soft computing techniques.
CO-5: To understand the basic networks and network algorithms.

Unit I Issues regarding classification and prediction, Bayesian Classification, Classification by back propagation, Classification based on concepts from association rule mining, Other Classification Methods, Classification accuracy.

Unit II Introduction to Decision trees - Classification by decision tree induction – Various types of pruning methods – Comparison of pruning methods – Issues in decision trees – Decision Tree Inducers – Decision Tree extensions.

Unit III Introduction, Core text mining operations, Preprocessing techniques, Categorization, Clustering, Information extraction, Probabilistic models for information extraction

Unit IV Soft Computing: Rationale, motivations, needs, basics: examples of applications in diverse fields, Basic tools of soft computing: Neural Networks, Fuzzy Logic Systems, and Support Vector Machines, Statistical Approaches to Regression and Classification - Risk Minimization, Support Vector Machine Algorithms.

Unit V Single-Layer Networks: The Perceptron, The Adaptive Linear Neuron (Adaline) and the Least Mean Square Algorithm - Multilayer Perceptrons: The Error Backpropagation Algorithm – The Generalized Delta Rule, Heuristics or Practical Aspects of the Error Backpropagation Algorithm.

22MAT660 **Machine Learning** **3 0 0 3**

Course Outcomes:

CO1: To understand the basics of supervised leaning.

CO2: To understand the basics of unsupervised learning.

CO3: To understand the basics of deep learning and its applications.

CO4: Carry out some case studies using ML techniques..

Supervised Learning (Regression/Classification) : Basic methods: Distance-based methods, Nearest-Neighbors, Decision Trees, Naïve Bayes. Linear models: Linear Regression, Logistic Regression, Generalized Linear Models. Support Vector Machines, Nonlinearity and Kernel Methods. Beyond Binary Classification: Multi-class/Structured Outputs, Ranking

Unsupervised Learning: Clustering: K-means/Kernel K-means. Dimensionality Reduction: PCA and kernel PCA. Matrix Factorization and Matrix Completion. Generative Models (mixture models and latent factor models)

Assorted Topics: Evaluating Machine Learning algorithms and Model Selection. Introduction to Statistical Learning Theory. Ensemble Methods (Boosting, Bagging, Random Forests). Sparse Modeling and Estimation. Modeling Sequence/Time-Series Data. Deep Learning and Feature Representation Learning. Scalable Machine Learning (Online and Distributed Learning). A selection from some other advanced topics, e.g., Semi-supervised Learning, Active Learning, Reinforcement Learning, Inference in Graphical Models, Introduction to Bayesian Learning and Inference.

22MAT668 Social Network Analytics 3 0 0 3

Course Outcomes:

CO1: To understand the basics of social networks and its modelling.

CO2: To understand the fundamental of social data analytics.

CO3: Understand and apply the data mining concepts in social networks.

CO4: Carry out some case studies in social network analysis.

Unit 1 : Online Social Networks (OSNs)

Introduction - Types of social networks (e.g., Twitter, Facebook), Measurement and Collection of Social Network Data. Techniques to study different aspects of OSNs -- Follower-followee dynamics, link farming, spam detection, hashtag popularity and prediction, linguistic styles of tweets. Case Study: An Analysis of Demographic and Behaviour Trends using Social Media: Facebook, Twitter and Instagram

Unit 2: Fundamentals of Social Data Analytics

Introduction - Working with Social Media Data, Topic Models, Modelling social interactions on the Web – Agent Based Simulations, Random Walks and variants, Case Study: Social Network Influence on Mode Choice and Carpooling during Special Events: The Case of Purdue Game Day

Unit 3 : Applied Social Data Analytics

Application of Topic models, Information Diffusion, Opinions and Sentiments - Mining, Analysis and Summarization, Case Study: Sentiment Analysis on a set of Movie Reviews using Deep Learning techniques, Recommendation Systems, Language dynamics and influence in online communities, Community identification, link prediction and topical search in social networks, Case Study: The Interplay of Identity and Social Network: A Methodological and Empirical Study

22MAT669 Computer Aided Drug Designing 3 0 0 3

Course Outcomes:

CO1: To understand the basics of molecular modelling.

CO2: To understand the quantitative structure and activity relationship.

CO3: Understand and apply PCA in molecular design.

CO4: To understand important drug databases, designing Lipinski's rule of five.

Introduction to Molecular Modeling: Molecular Modeling and Pharmacoinformatics in Drug Design, Phases of Drug Discovery, Target identification and validation

Protein Structure Prediction and Analysis: Protein Structure prediction methods: Secondary Structure Prediction, Tools for Structure prediction; Protein structural visualization; Structure validation tools; Ramachandran Plot.

QSAR : Quantitative Structure and Activity Relationship - Historical Development of QSAR, Tools and Techniques of QSAR, Molecular Structure Descriptors.

Multivariate Statistical methods in QSAR -Principal Component Analysis (PCA) and Hierarchical Cluster Analysis(HCR). Regression analysis tools - Pincipal Component Regression (PCR), Partial Least Squares (PLS) - Case studies.

High Throughput / Virtual screening- Introduction, Basic Steps, Important Drug Databases, Designing Lipinski's Rule of Five, ADMET screening

Docking Studies- Target Selection, Active site analysis, Ligand preparation and conformational analysis, Rigid and flexible docking .

Molecular visualization tools: RasMol and Swiss-Pdb Viewer

Molecular docking tools: AutoDock and ArgusLab.

21MAT670 EVOLUTIONARY GAME DYNAMICS 3 0 0 3

Course Outcomes:

CO1: To understand the basics of evolutions and its game theoretic frameworks.

CO2: To understand the basic qualitative theory of dynamical systems.

CO3: To understand the deterministic evolutionary game dynamics in infinite populations.

CO4: To understand the stochastic evolutionary game dynamics in finite populations.

Unit-1 : Basics of evolution-Examples of evolution in biology, ecology, society, and language; Darwin's theory; Fisher's fundamental theorem; Price equation; Hamilton's inclusive fitness theory.

Unit-2 : Basics of game theoretic concepts-Concepts of Nash equilibrium, Pareto efficiency, risk dominance, and evolutionary stable strategy; normal and extensive forms; repeated games and evolution of cooperation; spatial games.

Unit-3 : Basics of nonlinear dynamic-Autonomous flows and maps, fixed points, linear stability analysis, limit cycles, chaos.

Unit-4 : Games in infinite population: deterministic models, Quasispecies equation, replicator--mutator equation, imitation dynamics, monotone selection dynamics, best--response dynamics, adjustment dynamics, adaptive dynamics, evolutionary stable state, connection between replicator--mutator equation and expanded Price equation, Folk theorem, application to language evolution.

Unit-5: Games in finite population: stochastic models, Moran process, birth--death process, fixation probability, Kimura's neutral theory of evolution, one--third law and its relation with risk dominance, evolutionary stability, evolutionary graph theory.

18HIN101 HINDI I 1-0-2[2cr]

Unit-1

a)Introduction to Hindi Language, -other Indian Language‟s, Of Language Technical terminology..
b) Hindi alphabet: ParibhashaAurBhed.
c) Shabda: ParibhashaAurBhed, RoopantharkiDrishti se
d) Sangya -ParibhashaAurBhed,SangyakeRoopanthar-ling, vachan, karak
e) Sarvanaam- ParibhashaAurBhed.

Unit-2

a) Common errors and error corrections in Parts of Speech –with emphasis on use of pronouns, Adjective and verb in different tenses –gender& number
b) Conversations, Interviews, Short speeches.

Unit -3

a) Letter writing –ParibhashaAurBhed, Avedanpatra (request letter) & Practice
b) Translation-ParibhashaAurBhed, English to Hindi

Unit- 4

Peom : Maithilisharangupth: sakhivemujsekahakarjaate
a) Suryakanthtripatinirala :Priyatam
b) Mahadevivarma- adhikaar
c) Shiyaramsharangupth:ekphoolkichah

Unit- 5

Kahani
a) Kafan - Premchand ,
b) Rajasthan ki Ek Gaav kee theerthyatra - Beeshmasahni
c) Raychandrabhai :By Mahathma Gandhi - Sathya ke prayog
d) Rajani - Mannu Bhandari

Course Outcomes

CO1: To understand the nature & culture of the language.
CO2: Ability to understand the structure of the language in different contexts. .
CO3: To understand the functional skills of the language.
CO4: Enhance the social contribution of modern literature.

CO5: Develop research and secondary reading ability.

18HIN111 HINDI II 1-0-2[2cr]

Unit -1

a) Visheshan- ParibhashaAurBhed.special usage of adverbs, changing voice and conjunctions in sentences.
b) kriya- ParibhashaAurBhed, rupantharkidrushti se-kaal
c) padhparichay.
d) Vigyapan Lekhan (Advertisement writing), Saar Lekhan (Precise writing).

Unit -2

Communicative Hindi – MoukhikAbhivyakthi –understanding proper pronunc Interviews ,short speeches .

Unit -3

Film review,Audio –Visual-Media in Hindi –Movies appreciation and evaluation.News reading and presentations in Radio and Tv channels in Hindi, samvaadhlekhan,

Unit -4

a) Harishankarparasaiyi- SadacharkaThavis
b) Jayashankarprasadh –Mamata
c) Mannubandari- Akeli
d) Habibtanvir- Karthus

Unit -5

Kavya Tarang

a) Himadri thung shrung se (poet- Jayasankar prasad)
b) Dhabba (poet- kedarnath sing) ,
c) Proxy (poet- Venugopal),
d) Machis(poet –Suneeta Jain) ,
e) Vakth. (poet –Arun kamal)
f) Fasal (poet- Sarveshwar Dayal Saxena)

Course Outcomes

CO1: Develop the creativity & language competence.
CO2: To improve the writing and analytical skillsTeaching
CO3: Enhancing critical thinking.
CO4: A good exposure with the different styles of literary writing.
CO5: To understand the post- modern trends of literature.

18KAN101 KANNADA I 1-0-2[2cr]

- To enable the students to acquire basic skills in functional language.
- To develop independent reading skills and reading for appreciating literary works.
- To analyse language in context to gain an understanding of vocabulary, spelling, punctuation and speech

UNIT –1

- Railway Nildanadalli –K. S. Narasimha Swamy
- Amma, Aachara Mattu Naanu –K. S. Nisar Ahamad
- Kerege Haara –Janapada
- Simhaavalokana –H.S. Shivaprakash

UNIT –2

- Dhanwantri Chikitse - Kuvempu
- Mouni - Sethuram
- Meenakshi Maneya Mestru - Kuvempu

UNIT –3

- Sukha –H.G Sannaguddayya
- Mobile Thenkara Jen Nonagala Jhenkara –Nagesh Hegade
- Namma Yemmege Maatu Tiliyitu – Goruru Ramaswamy Iyangar

UNIT –4

Language structure

- Usage of punctuation marks
- Introduction to words (right usage)
- Reading skills
- Sentence formation (simple & complex)
- Translation- English to Kannada

References:

1. Kannada Samskruti Kosha –Dr. Chi. C Linganna
2. Kannada Sanna Kathegalu –G H Nayak
3. Lekhana Kale –N. Prahlad Rao
4. Kannada Sahithya Charithre –R. Sri Mugali

18KAN111 **KANNADA II** **1-0-2[2cr]**

Objectives:

- To enable the students to acquire basic skills in functional language.
- To develop independent reading skills and reading for appreciating literary works.
- To develop functional and creative skills in language.
- To enable the students to plan, draft, edit & present a piece of writing.

UNIT –1

- Bettada Melondu Maneya Maadi –Akka Mahadevi
- Thallanisadiru Kandya –Kanakadasa
- Avva –P. Lankesh
- Neevallave –K. S. Narasimha Swamy

UNIT –2

Gunamukha –Drama by P. Lankesh

UNIT –3

Karvalo –Novel by Poornachandra Thejaswi

UNIT –4

Letter Writing –

Personal (congratulation, invitation, condolence etc.)

- Official (To Principal, Officials of various departments, etc.,)
- Report writing
- Essay writing
- Precise writing

Prescribed text:

1. Gunamukha by P. Lankesh (Lankesh Prakashana)
2. Karvalo by Poornachandra Thejaswi (Mehtha publishing house)

Reference

1. Saamanyanige Sahithya Charitre (chapter 1 to 10) –Bangalore University Publication
2. Hosa Kannada Saahithya Charithre –L.S Sheshagiri Rao
3. Kacheri Kaipidi –Kannada Adhyayana Samsthe (Mysuru University)
4. Kannada Sahithya Charithre –R. Sri Mugali
5. H.S.Krishna Swami Iyangar –*Adalitha Kannada –Chetana Publication, Mysuru*

18SAN101 SANSKRIT I 1-0-2[2cr]

To familiarize students with Sanskrit language and literature.

To read and understand Sanskrit verses and sentences.

Self-study of Sanskrit texts and to practice communication in Sanskrit.

To help the students imbibe values of life and Indian traditions propounded by the scriptures.

To be able to speak in Sanskrit.

Module I

Introduction to Sanskrit language, Devanagari script - Vowels and consonants, pronunciation, classification of consonants, conjunct consonants, words –nouns and verbs, cases –introduction, numbers, Pronouns, communicating time in Sanskrit. Practical classes in spoken Sanskrit. (7 hours)

Module II

Verbs- Singular, Dual and plural —First person, Second person, Third person.

Tenses –Past, Present and future –Atmanepadi and parasmaipadi-kartharipraYoga.

(8hrs)

Module III

Words for communication and moral stories. (4 hrs)

Module IV

Chanakya Neethi first chapter (first 15 Shlokas) (6 hrs)

Module V

Translation of simple sentences from Sanskrit to English and vice versa.(5hs)

18SAN111 SANSKRIT II 1-0-2[2cr]

Module I

Seven cases, Avyayas, sentence making with Avyayas, Saptha kakaras.
(5hrs)

Module II

Kthavathu‟ Prathyayam, Upasargas,LyabanthaPrathyayamKthvatha,Thumu.ThreeLakaras– brief introduction, Lot lakara
(5hrs)

Module III

New words and sentences for the communication, Slokas, moral stories(panchathanthra) Subhashithas, riddles (Selected from the Pravesha Book) **(5hrs)**

Module IV

Introduction to classical literature, classification of Kavyas, classification of Dramas - Important five Maha kavyas

(5hrs)

Module V

Translation of paragraphs from Sanskrit to English and wise -verse
(5hrs)

Module VI

Bhagavad - Geeta fourteenth chapter (all 27 Shlokas) **(5hrs)**

Essential Reading:

1, Praveshaha; Publisher : Samskrita bharati, Aksharam, 8th cross, 2nd phase, girinagar, Bangalore -560

085 2, Sanskrit Reader I, II and III, R.S. Vadhyar and Sons, Kalpathi, Palakkad

3, PrakriyaBhashyamwritten and published by Fr. John Kunnappally

4, Sanskrit Primer by Edward Delavan Perry, published by Ginn and Company

Boston 5, Sabdamanjari, R.S. Vadyar and Sons, Kalpathi, Palakkad

6, Namalinganusasanam by Amarasimha published by Travancore Sanskrit series

7, SubhashitaRatnaBhandakara by Kashinath Sharma, published by Nirnayasagarpress
