## **M.Tech Structural and Construction Engineering**

*Department of Civil Engineering*

*Amrita Vishwa Vidyapeetham, Coimbatore*

**M.Tech- Structural and Construction Engineering  
Curriculum 2023-2025**

**First Semester**

<i>Course Code</i>	<i>Type</i>	<i>Course</i>	<i>L T P</i>	<i>Cr</i>
23MA601	FC	Linear Algebra, Legendre Equations and Numerical Methods	3-0-0	3
23SC601	FC	Advanced Mechanics of Solids	2-1-0	3
23SC602	FC	Advanced Reinforced Concrete Structures	2-1-0	3
23SC603	FC	Advanced Construction Practices	3-0-0	3
23SC604	FC	Construction Project Management	2-1-0	3
23SC681	SC	Experimental Techniques	0-0-3	1
22ADM501		Glimpses of Indian Culture		P/F
22AVP103	HU	Mastery Over Mind	1-0-2	2
23HU601	HU	Career Competency I	1-0-0	P/F
<b>Credits 18</b>				

**Second Semester**

<i>Course Code</i>	<i>Type</i>	<i>Course</i>	<i>L T P</i>	<i>Cr</i>
23SC611	SC	Building Information Modeling	1-0-3	2
23SC612	SC	Advanced Steel Design	2-1-0	3
23SC613	SC	Finite Element Analysis	2-0-3	3
23SC614	SC	Construction Software Laboratory	1-0-3	2
23SC615	FC	Construction Contract Laws & Regulations	2-1-0	3
	E	Programme Elective I	2 1 0	3
	E	Programme Elective II	2 1 0	3
23HU611	HU	Career Competency II	1-0-0	1
<b>Credits 20</b>				

**Third Semester**

<i>Course Code</i>	<i>Type</i>	<i>Course</i>	<i>L T P</i>	<i>Cr</i>
23LIV690*	PE	Programme Elective III/Live in Lab/Open Elective	2 1 0	3
23SC701	SC	Structural Design Studio	1-0-3	2
23SC795	SC	Industry Internship	0-0-3	P/F
23RM701	SC	Research Methodology	0-0-3	1
23SC798		Dissertation I	0-0-30	10
<b>Credits 16</b>				

**Fourth Semester**

<i>Course Code</i>	<b>Type</b>	<b>Course</b>	<b>L T P</b>	<b>Cr</b>
23SC799	P	Dissertation II	0-0-48	16
				<b>Credits 16</b>

**Total Credits 70**

**Summary**

<b>Semester</b>	<b>Construction Management Subjects</b>	<b>Cr</b>	<b>Structural Engineering Subject</b>	<b>Cr</b>
1	2 Theory (Core)	6	2 Theory (Core)	6
2	1 Theory Core Subjects 1 Lab Core Subject 2 Elective Subjects	5+6	2 Theory Core Subjects 2 Elective Subjects	12
3	2 Elective Subjects	6	2 Elective Subjects 1 Lab Subject	6

## List of Courses

### Foundation Core

<i>Course Code</i>	<i>Course</i>	<i>L T P</i>	<i>Cr</i>
23MA601	Linear Algebra, Legendre Equations and Numerical Methods	3-0-0	3
23SC601	Advanced Mechanics of Solids	2-1-0	3
23SC602	Advanced Reinforced Concrete Structures	2-1-0	3
23SC603	Advanced Construction Practices	3-0-0	3
23SC604	Construction Project Management	2-1-0	3
23SC615	Construction Contract Laws & Regulations	2-1-0	3

### Subject Core

<i>Course Code</i>	<i>Course</i>	<i>L T P</i>	<i>Cr</i>
23SC681	Experimental Techniques	0-0-3	1
23SC611	Building Information Modeling	1-0-3	2
23SC612	Advanced Steel Design	2-1-0	3
23SC613	Finite Element Analysis	2-0-3	3
23SC614	Construction Software Laboratory	1-0-3	2
23RM701	Research Methodology	0 0 3	1
23SC795	Industry Internship	0-0-3	P/F
23SC701	Structural Design Studio	1-0-3	2

### Programme Electives

<i>Course Code</i>	<i>Course</i>	<i>LTP</i>	<i>Cr</i>
23SC631	Mechanics of Composite Materials	2-1-0	3
23SC632	Advanced Concrete Technology	2-1-0	3
23SC633	Construction Methods and Equipment	2-1-0	3
23SC634	Structural Dynamics	2-1-0	3
23SC635	Theory of Plates and Shells	2-1-0	3
23SC636	System Integration in Construction	2-1-0	3
23SC637	Quality Control and Safety in Construction	2-1-0	3
23SC638	Pre-stressed Concrete Design	2-1-0	3
23SC639	Seismic Design of Structures	2-1-0	3
23SC640	Forensic Engineering and Rehabilitation of Structures	2-1-0	3
23SC641	Mechanics of Ground Improvement	2-1-0	3
23SC642	Optimization Techniques	2-1-0	3
23SC643	Smart Materials and Structures	2-1-0	3
23SC644	Stability of Structures	2-1-0	3
23SC645	Industrial Structures	2-1-0	3
23SC646	Bridge Engineering	2-1-0	3
23SC647	Prefabrication Engineering	2-1-0	3
23SC648	Design of Offshore Structures	2-1-0	3
23SC649	Pavement Analysis and Design	2-1-0	3
23SC650	Characterization of Materials	2-1-0	3
23SC651	Geotechnical Earthquake Engineering	2-1-0	3
23SC652	Soil Dynamics and Machine Foundations	2-1-0	3
23SC653	Statistical and Probabilistic Modeling In Civil Engineering	2-1-0	3
23SC654	Wind Effects on Structures	2-1-0	3
23SC655	Analysis and Design of Substructures	2-1-0	3
23SC656	Formwork, Scaffolding & Shoring	2-1-0	3
23SC657	Construction Economics & Finance	2-1-0	3
23LIV690*	Live-in-Lab*	2-1-0	3

### Open Electives\*\*

<i>Course Code</i>	<i>Course</i>	<i>L T P</i>	<i>Cr</i>
23SC661	Remote Sensing and GIS	2-1-0	3
23SC662	Sustainable Design & Construction Practices	2-1-0	3
23SC663	Environmental Impact Assessment for Projects	2-1-0	3
23SC731	Geotextiles - Applications in Construction Engineering	2-1-0	3

\*\*Students can opt for open electives offered by other departments with the consent of Department

### Evaluation Pattern

Following evaluation pattern will be followed for all **theory courses**

<b>Assessment component</b>	<b>Mark Component</b>
Continuous Assessment (Quiz, Assignment, Seminar, Project etc)	30
Mid Term Exam	30
End semester/Project	40

<i>Semester</i>	<i>Course Code</i>	<i>Course</i>	<i>L T P</i>	<i>Cr</i>
1	23MA601	Linear Algebra, Legendre Equations and Numerical Methods	3-0-0	3
	23SC601	Advanced Mechanics of Solids	3-1-0	4
	23SC602	Advanced Reinforced Concrete Structures	2-1-0	3
	23SC603	Advanced Construction Practices	3-0-0	3
	23SC604	Construction Project Management	2-1-0	3
2	23SC613	Finite Element Analysis	2-0-3	3
	23SC614	Construction Contract Laws & Regulations	2-1-0	3
		Programme Elective I	2-1-0	3
		Programme Elective II	2-1-0	3
	23HU602	Career Competency II	1-0-0	1
3		Programme Elective III/Live in Lab/Open Elective	2-1-0	3
All Electives				

Following evaluation pattern will be followed for all **Lab courses**

<b>Assessment Component</b>	<b>Mark Component</b>
Continuous Assessment	40
Mid Term Exam	20
End semester/Project	40

<i>Semester</i>	<i>Course Code</i>	<i>Course</i>	<i>L T P</i>	<i>Cr</i>
1	23SC681	Experimental Techniques	0-0-3	1
2	23SC611	Building Information Modeling	1-0-3	2
	23SC614	Construction Software Laboratory	1-0-3	2
3	23SC701	Structural Design Studio	1-0-3	2
	23RM701	Research Methodology	0-0-3	1

Following evaluation pattern will be followed for all **P/F courses**

<b>Assessment Component</b>	<b>Mark Component</b>
Continuous Assessment	40
Mid Term Exam	20
End semester/Project	40

<i>Semester</i>	<i>Course Code</i>	<i>Course</i>	<i>L T P</i>	<i>Cr</i>
1	23AVP601	Amrita Values Program		P/F
	23HU601	Career Competency I	1-0-0	P/F
3	23SC795	Industry Internship	0-0-3	P/F

Following evaluation pattern will be followed for **Project**

<b>Assessment Component</b>	<b>Mark Component</b>
Internal Review	60
External Review	40

<i>Semester</i>	<i>Course Code</i>	<i>Course</i>	<i>L T P</i>	<i>Cr</i>
3	23SC798	Dissertation I	0-0-30	10
4	23SC799	Dissertation II	0-0-48	16

## Course Content

23MA601

### LINER ALGEBRA, LEGENDRE EQUATIONS AND NUMERICAL METHODS

3-0-0-3

Linear Algebra: Linear systems of equations and solutions by iterative methods. Method of determining Eigen values and Eigen vectors by Power method. Vector spaces and subspaces, linear independence, basis and dimensions, linear transformations, orthogonality, Orthogonal basis, Gram Schmidt Process, least-square applications.

Differential equation with series solutions: Legendre's equation, Legendre's polynomial  $P_n(x)$ , Legendre's function of the second kind  $[Q_n(x)]$ , General solution of Legendre's equation, Rodrigue's formula, Legendre polynomials, A generating function of Legendre's polynomial, Orthogonality of Legendre polynomials, Recurrence formulae for  $P_n(x)$  Green's function – Green's Identities – Generalized functions.

Numerical methods: Numerical solution of partial differential equations – Elliptic, parabolic and hyperbolic equations.

Skills Acquired: Vector Spaces, Linear Independence, Orthogonality, Least square technique, Legendre's polynomial and generating functions. Solutions of System of equations-iterative method, iterative solutions of partial differential equations.

Employability: Employability in all the fields of science and engineering in both national and international industries / institutions.

<b>CO Code</b>	<b>Course outcome statement</b>
<b>CO1</b>	The concepts of vector Spaces, Understand basis vectors, dimension & span of vector spaces.
<b>CO2</b>	The orthonormal set, simple linear transformation and least square method and apply to some of the structural engineering problems.
<b>CO3</b>	Solutions of differential equations through the special functions. Apply to some engineering problems.
<b>CO4</b>	Iterative methods to solve the system of equations, to obtain the largest eigen values and to solve some PDE equations like, 1-D heat and wave equations.

<b>CO/PO</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	3	2				
<b>CO2</b>	2	3				
<b>CO3</b>	3	2				
<b>CO4</b>	2	3				

Representation of 3 D state of stress at a point - Equations of equilibrium - 3 D state of strain-strain-displacement relations, constitutive relations, compatibility conditions, displacement and traction boundary conditions- Principal stresses, principal strains, three dimensional problems. Two - dimensional idealisations, plane stress and plane strain problems, 2 D problems in rectangular and polar coordinates: Stress function, solution by polynomials, problems of axisymmetric stress distribution, pure bending of curved bars- Torsion of straight bars, membrane analogy, narrow rectangular crosssection, torsion of rectangular bars, rolled profile sections, hollow shafts and thin tubes.

Force method and stiffness method for analyzing skeletal structures; Extension of displacement method to the generalized stiffness method; Basic concepts associated with computer implementation of stiffness method. - One-dimensional beam element : Basis for cross-sectional level formulation of flexibility and stiffness; Flexibility approach for determining element stiffness; Stiffness approach for determining element stiffness; Special consideration of shear effects in stiffness approach; Consideration of torsional effects for thin-walled member; Special considerations for finite joints (both rigid and flexible); Consideration of local load (incl. temperature) effects; Formulation of geometric stiffness due to axial force; Linearized buckling analysis.

<b>CO Code</b>	<b>Course outcome statement</b>
<b>CO1</b>	Explain the principles and governing equations in elastic stage under different loading conditions
<b>CO2</b>	Solve 2 D and 3 D elastic boundary value problems in rectangular and polar coordinates
<b>CO3</b>	Analyse the structure using matrix method
<b>CO4</b>	Determine the crippling load by performing linearised buckling analysis

<b>CO/PO</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	3	3	3		3	
<b>CO2</b>	3	3	3	2	3	
<b>CO3</b>	3	3	3		3	2
<b>CO4</b>	3	3	3	2	3	2

Modeling considerations for Linear and Nonlinear Analysis of RC buildings – Analysis of buildings using commercially available software – Stress-strain characteristics of concrete under multi- axial stresses – Design, Nominal, and over-strength stress-strain relationship of Concrete and rebar – Confined concrete – Creep and shrinkage behaviour of Concrete – Effect of cyclic loading on concrete and reinforcing steel.

Review of design of beams, columns and walls – Introduction to interaction of Axial, Flexure and Shear Behaviour of structural elements – Strength hierarchy – Capacity design of elements – Inelastic behaviour of concrete beams and columns, moment – rotation curves – Design of long columns – Design of joints in frames – Curtailment of bars – moment redistribution - Yield line theory and its application for slabs – Basics of Flat slab design and Grid slab design

Strut and Tie Models – Design of corbels, Deep beams and RC squat walls

Control of deflections – Control of cracking – Codal procedures on crack-width and deflection computation. Fire resistance behaviour of RC members

CO Code	Course outcome statement
CO1	Understand properties of concrete and rebar
CO2	Understand the inelastic behaviour of RC elements
CO3	Understand the shear behaviour of RC elements using strut and tie method
CO4	Understand the serviceability requirement for RC elements

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6
CO1	1	3	3	2	1	
CO2	1	3	2	1	1	
CO3	1	3	2	1	1	
CO4	2	1	2	2		1

Construction materials:- Selection criteria. Metals and Special Alloys of Steel – Glass and Glazing - Structural Plastics and Composites - Polymer Membranes, Coatings, Adhesives - Flooring and Facade Materials - High performance concrete, Introduction to 3D concrete printing. Geotextiles- types, properties and construction applications- superstructure, functionality of geotextiles – strengthening material and drainage material. Role of geotextiles in waterproofing of foundation and building roofs - Coir geotextile as interior component-acoustics and thermal insulations - external vertical gardens - Lifecycle cost analysis using coir geotextiles.

Sub-structure construction:- Construction of diaphragm walls, H walls and basement- Shoring for deep cutting - Underpinning; Soil reinforcement – geotextiles- design criteria for geotextiles- Design step for erosion control and Geo-composite drainage. Mechanisms and concept of pavement, design of unpaved road, Giroud and Noiray method, U.S. Forest services, airfield pavement design, reflection cracking, pavement rehabilitation and repair, Nano material. Different types of facing elements, construction procedure, cost, design of Geosynthetics wrap around faced wall,- Trenchless Technology; Box jacking, Pipe Jacking. Tunneling Techniques; TBM - Piling Techniques-Driving Well and Caisson-Sinking Cofferdam - Cable Anchoring and Grouting.

Super Structure Construction:- Techniques of construction for continuous concreting operation in Tall buildings of various shapes and varying sections - cooling towers, silos, chimney - erection techniques of tall structures - - aerial transporting, material handling - erecting light weight components on tall structures - In-situ pre-stressing in high rise structures. Composite construction of steel and concrete. Rapid construction techniques.

Special Structures:- Bow string bridges, cable stayed bridges - Launching techniques for heavy decks and box decks - support structure for heavy equipment and machinery in industries.

<b>CO Code</b>	<b>Course outcome statement</b>
<b>CO1</b>	Identify suitability of modern construction materials for application in field situations.
<b>CO2</b>	Suggest the construction procedures for substructures and superstructures
<b>CO3</b>	Apply the suitable construction methods for special and heavy structures.

<b>CO/PO</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	3	3	2		2	
<b>CO2</b>	3	3		1	2	
<b>CO3</b>	3	3		1	2	

Project management processes - Stakeholders, Construction organisation. Contracts - bidding process-contract document. Project Time Management - Activity definition - work breakdown structure, Activity sequencing – scheduling logic, precedence diagramming method, arrow diagramming method, Activity duration estimation, Schedule development and analysis - critical path method, production curves, Linear scheduling method; line-of balance method. Resource constrained scheduling. Scheduling with Uncertain Durations-PERT- Monte Carlo Schedule Simulations. Techniques for project monitoring and control, Earned value analysis. Project Resource Management - Resource aggregation, Resource leveling – minimum moment algorithm, Resource allocation; Time-cost Tradeoff.

Introduction to Digitalization in Construction. Concepts of Economics - time value of money, evaluating alternatives.

4. Saleh Mubarak, *Construction Project Scheduling and Control*, Wiley, 2015.
5. S. M. Levy, *Project Management in Construction*, McGraw Hill, New York, 2018.

CO Code	Course outcome statement
CO1	Prepare a project scope and identify the various project delivery processes
CO2	Develop a schedule with physical, resource, time constraints
CO3	Monitor & control the time and cost of project execution

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6
CO1	3	3			1	1
CO2	3	3			1	
CO3	3	3			1	

Concrete mix proportioning, Study of High performance concrete -Introduction to Non Destructive Test methods.- Principles of operations of hydraulic loading systems, strain gauges, strain and force measuring devices, etc.-Utilization of Mechanical, electrical resistance and other types of strain gauges to study the behavior of structural members.-Use of static and dynamic data recording and processing systems. Demonstration on wind tunnel testing and durability study in concrete.

Similitude and structural models: dimensional analysis, Buckingham's Pi theorem, scale factors and dynamic similitude;elastic and inelastic models, size effects;Test planning, design and implementation: testing sequence and experimental plan, loading systems, devices, actuators and their control; various types of sensors for displacement, velocity, acceleration, pressure, loads, strains, full-field measurements

4. Shetty.M.S, *Concrete Technology*,S.Chand Publishers, 2009.

CO Code	Course outcome statement
CO1	Analyze the characteristics of mix constituents and design a concrete mix for field applications.
CO2	Implement various special concrete and various NDT methods based on the field conditions.
CO3	Analyze the stress -strain behaviour of steel and concrete elements using electrical/mechanical sensors and using data acquisition system.

CO Code	Course outcome statement
CO1	Create BIM model which helps in the coordination of construction process
CO2	Develop energy models for energy demand calculation using simulation
CO3	Prepare schedule and quantity take off with the help of BIM

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6
CO1	3	3	2			
CO2	3	3	2			
CO3	3	2	3			

Modeling considerations for Linear and Nonlinear Analysis of Steel buildings – Analysis of buildings using commercially available software

Properties of steel: mechanical properties, chemical composition, hysteresis, ductility; Hot-Rolled Sections: compactness and non-compactness, slenderness, residual stresses – Introduction to fabrication and erection of structural elements

Design of steel structures: inelastic bending – curvature, plastic moments,

Stability criteria: stability of beams - local buckling of compression flange & web, lateral-torsional buckling, stability of columns - slenderness ratio of columns, local buckling of flanges and web, bracing of column about weak axis, Recap: Method of design - allowable stress design, plastic design, load and resistance factor design;

Strength Criteria: beams – flexure, shear, torsion; columns - moment magnification factor, effective length, P-M interaction, bi-axial bending, joint panel zones;

Drift criteria: P- $\Delta$  effect, deformation-based design;

Connections: types – welded, bolted, location - beam-column, column-foundation, splices.

Types of connections, Behaviour of local elements, Analysis, Design and Detailing. Cold Formed Steel Members: Effective width and Direct Strength Design methods.

Introduction to Prefab Steel Structures – Design considerations – Term project

<b>CO2</b>	1	3	2	1	1	
<b>CO3</b>	1	3	2	1	1	
<b>CO4</b>	2	1	2	2		1

Basic Equations of Solid Mechanics - Review of equilibrium conditions, Strain displacement relations, Stress Strain relations, Principle of Virtual work & Stationery potential energy and variational formulation. Approximate methods – Rayleigh Ritz, Weighted residual (Galerkin) and finite difference methods (examples on plates) - Finite Element Method: Displacement model - Shape functions - Lagrange and serendipity elements, Element properties - Isoparametric elements - numerical integration, technique, Assemblage of elements and solution techniques for static analysis - Analysis of framed Structures - 2D truss and beam elements and applications. Analysis of plane stress/strain and axisymmetric solids - triangular and quadrilateral elements - incompatible mode elements. Three dimensional stress analysis - Isoparametric eight and twenty noded elements. Finite element programming/FEA Software.

Construction Contracts - Indian Contracts Act – Elements of Contracts – Types of Contracts – Features – Suitability – Tenders - Prequalification – Bid Formation – Accepting – Bid evaluation from Technical, Contractual and Commercial Points of View – Contract Formation and Interpretation – FIDIC, CPWD & NitiAayog Standard contract conditions. Design of Contract Documents – International Contract Document – Standard Contract Document – Law of Torts – World Bank Procedures and Guidelines – Potential Contractual Problems Transparency in Tenders Act.

Dispute resolution systems - Engineer In Charge decision-Change orders, Dispute Resolution studies, Documentation. Arbitration - Comparison of Actions and Laws – Agreements – Subject Matter – Violations – Appointment of Arbitrators – Conditions of Arbitration – Powers and Duties of Arbitrator – Rules of Evidence – Enforcement of Award – Costs. Legal Requirements - Insurance and Bonding – Laws Governing Sale, Purchase and Use of Urban and Rural Land – Land Revenue Codes – Tax Laws – Income Tax, Sales Tax, Excise and Custom Duties and their Influence on Construction Costs – Legal Requirements for Planning – Property Law – Agency Law – Local Government Laws for Approval – Statutory Regulations.

Labour Regulation - Social Security – Welfare Legislation – Laws relating to Wages, Bonus and Industrial Disputes, Labour Administration – Insurance and Safety Regulations – Workmen's Compensation Act – Factory Acts – Labour Laws.

<b>CO2</b>	3	3	3	2	3	3

**Unit I:**

Meaning of Research, Types of Research, Research Process, Problem definition, Objectives of Research, Research Questions, Research design, Approaches to Research, Quantitative vs. Qualitative Approach, Understanding Theory, Building and Validating Theoretical Models, Exploratory vs. Confirmatory Research, Experimental vs Theoretical Research, Importance of reasoning in research.

**Unit II:**

Problem Formulation, Understanding Modeling & Simulation, Conducting Literature Review, Referencing, Information Sources, Information Retrieval, Role of libraries in Information Retrieval, Tools for identifying literatures, Indexing and abstracting services, Citation indexes

**Unit III:**

Experimental Research: Cause effect relationship, Development of Hypothesis, Measurement Systems Analysis, Error Propagation, Validity of experiments, Statistical Design of Experiments, Field Experiments, Data/Variable Types & Classification, Data collection, Numerical and Graphical Data Analysis: Sampling, Observation, Surveys, Inferential Statistics, and Interpretation of Results

**Unit IV:**

Preparation of Dissertation and Research Papers, Tables and illustrations, Guidelines for writing the abstract, introduction, methodology, results and discussion, conclusion sections of a manuscript. References, Citation and listing system of documents

**Unit V:**

Intellectual property rights (IPR) - patents- copyrights- Trademarks- Industrial design geographical indication. Ethics of Research- Scientific Misconduct- Forms of Scientific - Misconduct. Plagiarism, Unscientific practices in thesis work, Ethics in science

**Prerequisite: 23SC601- Advanced Mechanics of Solids**

Introduction – Formulation of governing equations and associated boundary conditions by equilibrium and energy methods, Rectangular plates- Solution of equation by double and single series, Circular plates – Symmetric and unsymmetric loading cases, Continuous Plates, Plates with various plan forms, plates with variable flexural rigidity, plates on elastic foundation . Numerical and Approximate Methods- finite difference method- finite element method, energy methods and other variational methods. Introduction, Theory of Surfaces- first and second fundamental forms- principal curvatures, Formulation of governing equations in general orthogonal curvilinear coordinates based on classical assumptions- Various shell theories, Membrane theory- governing equations- shells of revolution- application to specific geometric shapes- ax symmetric and non –axisymmetric loading cases. General theory of shells- governing equations and associated boundary conditions for specific geometry of shells (cylindrical, conical and spherical shells)- classical solutions – finite difference and finite element methods applied to shell problems.

CO1	2	3	1			
CO2	2	2	1			

Buckling of columns – introduction – concepts of stability – methods of Neutral Equilibrium – Euler column – Eigen value problem – Axially loaded column – Eccentrically loaded column, Energy principle – Raleigh Ritz method – Galerkin method – Numerical methods (New mark's Finite Difference and matrix methods) Beams and Beam columns – introduction – lateral buckling of beams – beam column with concentrated and distributed loads – effect of axial load on bending stiffness, Buckling of frames – introduction – modes of buckling – critical load using various methods. Neutral equilibrium – slope deflection equations, matrix method. Buckling of plates – Differential equation of plate buckling – critical load on plates for various boundary conditions – Energy method – Finite difference method.

CO Code	Course outcome statement
CO1	Understand the difference between stability and instability
CO2	Evaluate the stability of column, beam column and frames.
CO3	Assess the influence of plate buckling feature in the design

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6
CO1	2	2	1		3	1
CO2	3	3	3	2	3	2
CO3	3	3	3	2	3	2

Planning and Functional Requirements: Classification of Industries and Industrial Structures – understanding the workflow of the industry - planning for layout requirements regarding lighting, ventilation and fire safety – protection against noise and vibration – guidelines from factories act – material handling systems – erection sequence and guidelines for supporting structure. Introduction to Steel structures and connection details. Design of Gantry girders, Plate girders, Cooling towers, Bunkers and Silos. Light gauge steel structures – Direct strength method, Behaviour of Compression Elements - Effective width for load and deflection determination – Behaviour of Unstiffened and Stiffened Elements – Design of webs of beams – Flexural members – Lateral buckling of beams – Shear Lag – Flange Curling – Design of Compression Members – Wall Studs.

Introduction Classification and components of bridges, historical perspective, layout and planning, investigations for Bridges, choice of type of the bridges, conceptual bridge design, bridge aesthetics. Bridge appurtenances. Loads on bridges, loading standards for highway (IRC) - Analysis and design of RC and PSC bridge decks: slab culvert bridges, slab and beam bridges, load distribution in slabs and beams, bowstring girder bridges, behaviour of skew bridge decks. Behaviour, analysis and design of composite construction. Design of bearings, substructure and foundations piers and abutments of different types, shallow and deep foundations design and constructional aspects. Modern methods of construction of concrete, steel and composite bridges, their impact on analysis and design.

5. McClelland, B and Reifel, M. D., *Planning & Design of fixed offshore Platforms*, Kluwer Academic Publishers, 1986.

CO Code	Course outcome statement
CO1	Understand the different offshore structures and differences from onshore structures
CO2	Find and understand important recommendations regarding environmental conditions and load estimation.
CO3	Describe the layout of marine structures from a functional and safety requirements point of view

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6
CO1	2	3	1		1	2
CO2	2	2	1		1	2
CO3	2	2	3	2	2	2

Introduction - Comparison between Flexible & Rigid Pavements -Highway and Airport pavements – Types and Component layers of Pavements – their functions - A brief study on aggregates, bitumen and modified bitumen like cutback, emulsion, polymer modified bitumen, Reclaimed Asphalt Pavement

Factors affecting Design and Performance of Pavements - Various Methods of Assessment of Subgrade Soil Strength for Pavement Design - Causes and Effects of variation in Moisture Content and Temperature. Bituminous mix design methods, specifications and testing. Analysis & Design of Flexible Pavement: Stresses and Deflections in Homogeneous Masses - Burmister's 2-layer, 3- layer Theories - Wheel Load Stresses - ESWL of Multiple Wheels – Repeated Loads and EWL factors - Sustained Loads and Pavement behaviour under Traffic Loads - Empirical, Semi-empirical and Theoretical Approaches - Development, Principle, Design steps, Advantages and Applications of different Pavement Design Methods Analysis & Design of Rigid pavements: Types of Stresses and Causes, Factors influencing the Stresses; General conditions in Rigid Pavement Analysis, ESWL, Wheel Load Stresses, Warping Stresses, Friction Stresses, Combined Stresses - Types of Joints in Cement Concrete Pavements and their Functions, Joint Spacing, Design of Slab Thickness, Design of Joint Details for Longitudinal Joints, Contraction Joints and Expansion Joints, IRC Method of Design.- Pavement Structure & Its Evaluation: Factors affecting Structural Condition of Flexible and Rigid Pavements; Evaluation by Non-Destructive Tests. Pavement Overlays & Design.

CO1	3	2	1		2	2
CO2	3	3	1	1	2	2
CO3	3	2	1	1	2	2

Characterization Techniques: Structure of solids: crystal systems and space groups, Bravais lattices, direct and reciprocal lattice, Bragg law, powder diffraction and phase identification, single crystal diffraction, structure factor, X-ray crystal structure determination. Fundamental principles and application to Material characterization: Macroscopic and microscopic techniques– visual examination-optical and electron microscopy (SEM,TEM); chemical and mineralogical analysis techniques – X-ray and neutron diffraction; spectroscopic techniques-image analysis, and nondestructive techniques. Methods for Structure Determination-X-ray diffraction; Analytical techniques for the determination of Structure of construction materials-FTIR, AFM and thermal analyses (sample preparation), energy dispersive analysis (EDAX) - Characterisation of rheological behavior: Rheological parameters; Classifications of fluids, time independent and time-dependent fluids, elastic viscous fluids. Constitutive equation of rheology, shear and extensional viscosities, dependence of viscosity on temperature, pressure, molecular weight, strain rate and time. Flow curve. Viscoelasticity - effect of rate of strain, temperature and time on mechanical behavior; Creep, creep compliance, stress relaxation; Dynamic mechanical properties. Flow analysis using rheological models. Measurement of rheological properties. Application of rheology in cement-based materials.

<b>CO Code</b>	<b>Course outcome statement</b>
<b>CO1</b>	Develop basic competence in assessing seismic hazard and in characterizing earthquake actions
<b>CO2</b>	Understand basic aspects of soil under dynamic loading and role of soil deposits.
<b>CO3</b>	Perform ground response analysis using conventional approaches
<b>CO4</b>	Evaluate the liquefaction potential using a range of simplified methodologies and understand the principles of mitigation measures
<b>CO5</b>	Understand the behavior of soil slopes under seismic loading

<b>CO/PO</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>

Engineering economics: Basic principles – Time value of money, Quantifying alternatives for decision making, Cash flow diagrams, Equivalence - Single payment in the future (P/F, F/P), Present payment compared to uniform series payments (P/ A, A/P), Future payment compared to uniform series payments (F/A, A/F), Arithmetic gradient, Geometric gradient.

Comparison of alternatives: Present, future and annual worth method of comparing alternatives, Rate of return, Incremental rate of return, Break-even comparisons, Capitalized cost analysis, Benefit-cost analysis. Depreciation, Inflation and Taxes. Equipment economics: Equipment costs, Ownership and operating costs, Buy/ Rent/Lease options, Replacement analysis.

Cost estimating: Types of Estimates, Approximate estimates – Unit estimate, Factor estimate, Cost indexes, Parametric estimate, Life cycle cost. Financial management: Construction accounting, Chart of Accounts, Financial statements – Profit and loss, Balance sheets, Financial ratios, Working capital management.

The interested students will get an opportunity to work in any of the villages and solve the technical problems in areas related to the course by applying the engineering knowledge they have acquired through their study. The students can visit the village and identify the problem at the end of first year (summer vacation), start working on it and complete in the third semester.

CO Code	Course outcome statement
CO1	Understand the problems faced by rural communities in India: Service to society
CO2	Study, observe, and interact with rural populations while living in rural communities and gain a better understanding of challenges in various areas
CO3	Undertake experiential learning opportunities, by taking theory into practice
CO4	Generate innovative solutions, thereby facilitating critical and collaborative problem solving abilities

CO3	3	2	3	-	2	3
CO4	3	3	3	1	2	3

Dissertation will have two internal review presentations and an end semester presentation. The first presentation will include identification of the problem based on the literature review on the topic referring to latest literature available. Second review presentation should be done on identification of topic for the work and the methodology adopted involving scientific research, collection and analysis of data and determining solutions. The end semester presentation must bring out individuals contribution and should have a strong conclusion. The review committee can make the decision on continuation of the project in the next semester.

CO Code	Course outcome statement
CO1	Identify structural , construction and construction management problems reviewing available literature.
CO2	Identify appropriate techniques to analyze complex systems.
CO3	Apply engineering and management principles through efficient handling of project.

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6
CO1	3	1	3	2	3	1
CO2	3	3	3	1	3	2
CO3	1	1	3	3	2	2

This can be an extension to work on the topic identified in previous semester “Dissertation I” or can be a new one based on the recommendations of review committee. Continuous assessment should be done on the work done by adopting the methodology decided involving numerical analysis/ conduct experiments, collection and analysis of data, etc. After approval by the internal review committee the student has to submit the detail report on the work done and external examiner is called for the viva-voce. The student has to submit a technical paper based on the dissertation in any of the peer reviewed Scopus indexed journal.

CO Code	Course outcome statement
CO1	Solve complex structural, construction and management related problems by applying appropriate techniques and tools.
CO2	Exhibit good research orientation, communication and writing skill to the engineering community and society.
CO3	Demonstrate professional ethics and work culture

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6
CO1	3	3	2		1	1
CO2	2	2	3	3	2	1
CO3	1	1	3	2	1	3

Concepts and principles of remote sensing, Mechanism of Remote sensing, Definition components of remote sensing - energy sensor, interacting body, Active and Passive remote sensing, EMR interaction with earth surface material – Radiance, Irradiance, Incident, Reflected, Absorbed and Transmitted energy, Interaction with the atmosphere, Reflectance – specular and diffused reflection surfaces, Spectral signature – spectral signature curves – Interaction with targets: EMR interaction with water, soil and earth surface and its applications. Satellite characteristics – Orbits, Swath, Nadir, Pixel size, Sensor resolutions – Spatial, Spectral, Radiometric and Temporal, Indian Satellites and other purpose driven satellites, Data products, introduction to panchromatic, multispectral and hyperspectral data, Basics of Optical and Infra-red Remote sensing, Thermal remote sensing, Microwave remote sensing. Photogrammetry – Aerial and Terrestrial, Photo interpretation, Sensors – Colour scanners, thematic mapper. Digital image processing system, Pre-processing of raw data, Image enhancement, Transformation, Supervised and Un-Supervised Classification, Integration, Analysis and Interpretation.

Geographic information system, Components of GIS, Data, Spatial and non-spatial maps, Types of maps – projection – Types of projection, Data input – Digitiser, Scanner, Editing, Data acquisition – Raster and Vector data structures – comparison of raster and vector data structure, Analysis using raster and vector data – retrieval, reclassification, overlaying, buffering, Open source software, GIS and remote sensing applications in Civil Engineering.

<b>CO Code</b>	<b>Course outcome statement</b>
<b>CO1</b>	Understand and analyze the principles and components of remote sensing and EMR
<b>CO2</b>	Schematize the process of data acquisition of satellite images and their characteristics
<b>CO3</b>	Understand the principles of digital image processing and its applications
<b>CO4</b>	To understand the concepts and fundamentals of GIS and employ them in different civil engineering applications.

<b>CO/PO</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>

<b>CO4</b>	3	1	1	-	2	2

Sustainability in the built environment: sustainable development relative to ecological, economic and social conditions – efforts in sustainable development and construction – international organisations involved. Ethics and sustainability: environmental and resource concerns – resource consumption by construction industry-Green building movement. Ecological design – concept – major contributions. Building assessment and eco labels – standards (LEED, GRIHA) – assessment structure and process. Green building design process – documentation requirements. -Sustainable site and landscape – storm water management, heat island mitigation-assessment of sustainable sites. Building energy issues - building energy design strategy-building envelope – internal load reduction – energy optimisation - renewable energy systems. Reducing carbon footprint. Built environment hydrologic cycle – water resources issues – strategies for conservation and recycling – waste water and storm water handling strategies. Materials resources - Life cycle assessment – embodied energy – Green building materials and products – assessing for environmental impacts – design for deconstruction. Indoor environmental quality – issues and causes, components of integrated design – emissions from building materials. Construction operations – site planning, indoor air quality during construction – materials management – Construction and Demolition – waste management – building commissioning – LEED credits for different aspects. -Green building economics – quantifying benefits. Recent advances in sustainable construction.

CO Code	Course outcome statement
CO1	Assess resource consumption by the construction industry.
CO2	Evaluate Life cycle energy of materials and products.
CO3	Conceptualise eco-friendly constructions.
CO4	Quantify benefits of green buildings.

Concept of environment - Sustainable development - role of environmental impact assessment. EIA – definitions, terminology and overview. Evolution of EIA and its legal requirements for projects in India. EIA process for infrastructure projects- screening – scoping - setting – analysis – mitigation. Cross sectoral issues and terms of reference in EIA – Public Participation in EIA- EIA Consultant Accreditation.

EIA methodology for projects - Matrices – Networks – Checklists –Cost benefit analysis – Analysis of alternatives – Software packages for EIA – Expert systems in EIA. Prediction tools for EIA – Mathematical modeling for impact prediction – Assessment of impacts of projects on – air – water – soil – noise – biological — Cumulative Impact Assessment - Socioeconomic impact analysis, Evaluation of alternatives

Preparing the EIA report for infrastructure projects. Environmental impact statement (EIS), Environmental monitoring, Environmental audit (EA) - Case studies of infrastructure projects. Environmental Management Plan - preparation, implementation and review – Mitigation and Rehabilitation Plans – Policy and guidelines for planning and monitoring programmes – case studies of various projects

**Course Objective**

- Introduction to the geotextiles
- Exploring various types of geotextiles
- Application of geotextiles in structural and construction engineering.

**Syllabus****Unit 1**

Introduction to geotextiles -Types- Properties:- mechanical, functional and durability tests of geotextiles- Advantages and disadvantages of geotextiles -Application of geotextiles in structural members for strength enhancement- Role of geotextiles in waterproofing of foundation and building roofs - Coir geotextile as an interior component- acoustics and thermal insulations - external vertical gardens.

**Unit 2**

Types of geotextiles used in pavement construction - Use of geotextiles in flexible concrete pavement as reinforcement and separation layer - Use of geotextiles in drainage applications of pavements – Role of geotextile in embankment construction – Geocells and its applications in pavements- Strength enhancement of pervious concrete using geotextiles – Flexible pavement design using Coir and jute geotextiles as per IRC – Case studies on real-time application of geotextiles embedded pavements

**Unit 3**

Technical textiles – functions: separation, filtration, drainage, fluid barrier, reinforcement - hydraulic and environmental properties. Applications in flood management – river training works – design of embankments - erosion and sediment control works. Applications in dams – seepage prevention in embankment dams, earthen dams and gravity dams – drainage of infiltrated water. Canal lining – seepage mechanism in canals – detection, measurement and analysis of seepage – remedial measures. Reservoirs and ponds – seepage measurement and control – cutoff trenches – reduction – usage of geosynthetics – applications in environmental pollution control – landfills – case studies.
